BE IT REMEMBERED, That on the fourteenth day of April, in the fifty-second year of the Independence of the United States of America, Noah Webster, of the said District, hath deposited in this office the title of a Book, the right whereof he claims as Author, in the words following, to wit:

"An American Dictionary of the English Language; intended to exhibit, I. The origin, affinities, and primary signification of English words, as far as they have been ascertained. II. The genuine orthography and pronunciation of words, according to general usage, or to just principles of analogy. III. Accurate and discriminating definitions, with numerous authorities and illustrations. To which are prefixed, an introductory dissertation on the origin, history and connection of the languages of Western Asia and of Europe, and a concise grammar of the English language. By Noah Webster, LL. D. In two volumes."

In conformity to the act of Congress of the United States, entitled, "An act for the encouragement of learning, by securing the copies of Maps, Charts and Books, to the authors and proprietors of such copies, during the times therein mentioned."—And also to the act, entitled, "An act supplementary to an act, entitled 'An act for the encouragement of learning, by securing the copies of maps, charts, and books, to the authors and proprietors of such copies during the times therein mentioned,' and extending the benefits thereof to the arts of designing, engraving, and etching historical and other prints."

PREFACE.

In the year 1783, just at the close of the revolution, I published an elementary book for facilitating the acquisition of our vernacular tongue, and for correcting a vicious pronunciation, which prevailed extensively among the common people of this country. Soon after the publication of that work, I believe in the following year, that learned and respectable scholar, the Rev. Dr. Goodrich of Durham, one of the trustees of Yale College, suggested to me, the propriety and expediency of my compiling a dictionary, which should complete a system for the instruction of the citizens of this country in the language. At that time, I could not indulge the thought, much less the hope, of undertaking such a work; as I was neither qualified by research, nor had I the means of support, during the execution of the work, had I been disposed to undertake it. For many years therefore, though I considered such a work as very desirable, yet it appeared to me impracticable; as I was under the necessity of devoting my time to other occupations for obtaining subsistence.

About twenty seven years ago, I began to think of attempting the compilation of a Dictionary. I was induced to this undertaking, not more by the suggestion of friends, than by my own experience of the want of such a work, while reading modern books of science. In this pursuit, I found almost insuperable difficulties, from the want of a dictionary, for explaining many new words, which recent discoveries in the physical sciences had introduced into use. To remedy this defect in part, I published my Compendious Dictionary in 1806; and soon after made preparations for undertaking a larger work.

My original design did not extend to an investigation of the origin and progress of our language; much less of other languages. I limited my views to the correcting of certain errors in the best English Dictionaries, and to the supplying of words in which they are deficient. But after writing through two letters of the alphabet, I determined to change my plan. I found myself embarrassed, at every step, for want of a knowledge of the origin of words, which Johnson, Bailey, Junius, Skinner and some other authors do not afford the means of obtaining. Then laying aside my manuscripts, and all books treating of language, except lexicons and dictionaries, I endeavored, by a diligent comparison of words, having the same or cognate radical letters, in about twenty languages, to obtain a more correct knowledge of the primary sense of original words, of the affinities between the English and many other languages, and thus to enable myself to trace words to their source.

I had not pursued this course more than three or four years, before I discovered that I had to unlearn a great deal that I had spent years in learning, and that it was necessary for me to go back to the first rudiments of a branch of erudition, which I had before cultivated, as I had supposed, with success.

I spent ten years in this comparison of radical words, and in forming a synopsis of the principal words in twenty languages, arranged in classes, under their primary elements or letters. The result has been to open what are to me new views of language, and to unfold what appear to be the genuine principles on which these languages are constructed.

After completing this synopsis, I proceeded to correct what I had written of the Dictionary, and to complete the remaining part of the work. But before I had finished it, I determined on a voyage to Europe, with the view of obtaining some books and some assistance which I wanted; of learning the real state of the pronunciation of our language in England, as well as the general state of philology in that country; and of attempting to bring about some agreement or coincidence of opinions, in regard to unsettled points in pronunciation and grammatical construction. In some of these objects I failed; in others, my designs were answered.

It is not only important, but, in a degree necessary, that the people of this country, should have an American Dictionary of the English Language; for, although the body of the language is the same as in England, and it is desirable to perpetuate that sameness, yet some differences must exist. Language is the expression of ideas; and if the people of one country cannot preserve an identity of ideas, they cannot retain an identity of language. Now an
PREFACE.

identity of ideas depends materially upon a sameness of things or objects with which the people of the two countries are conversant. But in no two portions of the earth, remote from each other, can such identity be found. Even physical objects must be different. But the principal differences between the people of this country and of all others, arise from different forms of government, different laws, institutions and customs. Thus the practice of hawking and hunting, the institution of heraldry, and the feudal system of England originated terms which formed, and some of which now form, a necessary part of the language of that country; but, in the United States, many of these terms are no part of our present language,—and they cannot be, for the things which they express do not exist in this country. They can be known to us only as obsolete or as foreign words. On the other hand, the institutions in this country which are new and peculiar, give rise to new terms or to new applications of old terms, unknown to the people of England; which cannot be explained by them and which will not be inserted in their dictionaries, unless copied from ours. Thus the terms, land-office; land-warrant; location of land; consociation of churches; regent of a university; intendant of a city; plantation, selectmen, senate, congress, court, assembly, escheat, &c. are either words not belonging to the language of England, or they are applied to things in this country which do not exist in that. No person in this country will be satisfied with the English definitions of the words congress, senate and assembly, court, &c. for although these are words used in England, yet they are applied in this country to express ideas which they do not express in that country. With our present constitutions of government, escheat can never have its feudal sense in the United States.

But this is not all. In many cases, the nature of our governments, and of our civil institutions, requires an appropriate language in the definition of words, even when the words express the same thing, as in England. Thus the English Dictionaries inform us that a Justice is one deputed by the King to do right by way of judgment—he is a Lord by his office—Justices of the peace are appointed by the King’s commission—language which is inaccurate in respect to this officer in the United States. So constitutionally is defined by Todd or Chalmers, legally, but in this country the distinction between constitution and law requires a different definition. In the United States, a plantation is a very different thing from what it is in England. The word marshal, in this country, has one important application unknown in England or in Europe.

A great number of words in our language require to be defined in a phraseology accommodated to the condition and institutions of the people in these states, and the people of England must look to an American Dictionary for a correct understanding of such terms.

The necessity therefore of a Dictionary suited to the people of the United States is obvious; and I should suppose that this fact being admitted, there could be no difference of opinion as to the time, when such a work ought to be substituted for English Dictionaries.

There are many other considerations of a public nature, which serve to justify this attempt to furnish an American Work which shall be a guide to the youth of the United States. Most of these are too obvious to require illustration.

One consideration however which is dictated by my own feelings, but which I trust will meet with approbation in correspondent feelings in my fellow citizens, ought not to be passed in silence. It is this. “The chief glory of a nation,” says Dr. Johnson, “arises from its authors.” With this opinion deeply impressed on my mind, I have the same ambition which actuated that great man when he expressed a wish to give celebrity to Bacon, to Hooker, to Milton and to Boyle.

I do not indeed expect to add celebrity to the names of Franklin, Washington, Adams, Jay, Madison, Marshall, Ramsay, Dwight, Smith, Trumbull, Hamilton, Belknap, Ames, Mason, Kent, Hare, Silliman, Cleaveland, Walsh, Irving, and many other Americans distinguished by their writings or by their science; but it is with pride and satisfaction, that I can place them, as authorities, on the same page with those of Boyle, Hooker, Milton, Dryden, Addison, Ray, Milner, Cowper, Davy, Thomson and Jameson.

A life devoted to reading and to an investigation of the origin and principles of our vernacular language, and especially a particular examination of the best English writers, with a view to a comparison of their style and phraseology, with those of the best American writers, and with our colloquial usage, enables me to affirm with confidence, that the genuine English idiom is as well preserved by the unmixed English of this country, as it is by the best English writers. Examples to prove this fact will be found in the Introduction to this work. It is true, that many of our writers have neglected to cultivate taste, and the embellishments of style; but even these have written the language in its genuine idiom. In this respect, Franklin and Washington, whose language is their hereditary mother tongue, unsophisticated by modern grammar, present as pure models of genuine English, as Addison or
PREFACE.

Swift. But I may go farther, and affirm, with truth, that our country has produced some of the best models of composition. The style of President Smith; of the authors of the Federalist; of Mr. Ames; of Dr. Mason; of Mr. Harper; of Chancellor Kent; [the prose] of Mr. Barlow; of the legal decisions of the Supreme Court of the United States; of the reports of legal decisions in some of the particular states; and many other writings; in purity, in elegance and in technical precision, is equaled only by that of the best British authors, and surpassed by that of no English compositions of a similar kind.

The United States commenced their existence under circumstances wholly novel and unexampled in the history of nations. They commenced with civilization, with learning, with science, with constitutions of free government, and with that best gift of God to man, the christian religion. Their population is now equal to that of England; in arts and sciences, our citizens are very little behind the most enlightened people on earth; in some respects, they have no superiors; and our language, within two centuries, will be spoken by more people in this country, than any other language on earth, except the Chinese, in Asia, and even that may not be an exception.

It has been my aim in this work, now offered to my fellow citizens, to ascertain the true principles of the language, in its orthography and structure; to purify it from some palpable errors, and reduce the number of its anomalies, thus giving it more regularity and consistency in its forms, both of words and sentences; and in this manner, to furnish a standard of our vernacular tongue, which we shall not be ashamed to bequeath to three hundred millions of people, who are destined to occupy, and I hope, to adorn the vast territory within our jurisdiction.

If the language can be improved in regularity, so as to be more easily acquired by our own citizens, and by foreigners, and thus be rendered a more useful instrument for the propagation of science, arts, civilization and Christianity; if it can be rescued from the mischievous influence of sciolists and that dabbling spirit of innovation which is perpetually disturbing its settled usages and filling it with anomalies; if, in short, our vernacular language can be redeemed from corruptions, and our philology and literature from degradation; it would be a source of great satisfaction to me to be one among the instruments of promoting these valuable objects. If this object cannot be effected, and my wishes and hopes are to be frustrated, my labor will be lost, and this work must sink into oblivion.

This Dictionary, like all others of the kind, must be left, in some degree, imperfect; for what individual is competent to trace to their source, and define in all their various applications, popular, scientific and technical, sixty or seventy thousand words! It satisfies my mind that I have done all that my health, my talents and my pecuniary means would enable me to accomplish. I present it to my fellow citizens, not with frigid indifference, but with my ardent wishes for their improvement and their happiness; and for the continued increase of the wealth, the learning, the moral and religious elevation of character, and the glory of my country.

To that great and benevolent Being, who, during the preparation of this work, has sustained a feeble constitution, amidst obstacles and toils, disappointments, infirmities and depression; who has twice borne me and my manuscripts in safety across the Atlantic, and given me strength and resolution to bring the work to a close, I would present the tribute of my most grateful acknowledgments. And if the talent which he entrusted to my care, has not been put to the most profitable use in his service, I hope it has not been “kept laid up in a napkin,” and that any misapplication of it may be graciously forgiven.

INTRODUCTION.

DEFINITION OF LANGUAGE.

Language or Speech is the utterance of articulate sounds or voices, rendered significant by usage, for the expression and communication of thoughts.

According to this definition, language belongs exclusively to intellectual and intelligent beings, and among terrestrial beings, to man only; for no animal on earth, except man, can pronounce words. The word language is sometimes used in a more comprehensive sense, and applied to the sounds by which irrational animals express their feelings or affections; as to the neighing of the horse, the bawling of the ox, the barking of the dog, and to the cackling and chirping of fowls; for the sounds uttered by these animals are perfectly understood by the respective species. So also language is figuratively applied to the signs by which deaf and dumb persons manifest their ideas; for these are instruments of communicating thoughts.

But language, in its proper sense, as the medium of intercourse between men, or rational beings, endowed with the faculty of uttering articulate sounds, is the subject now to be considered.

Written language is the representation of significant sounds by letters, or characters, single or combined in words, arranged in due order, according to usage.

ORIGIN OF LANGUAGE.

We read, in the Scriptures, that God, when he had created man, “Blessed them and said to them, Be fruitful and multiply and replenish the earth and subdue it; and have dominion over the fish of the sea, &c.” God afterwards planted a garden, and placed in it the man he had made, with a command to keep it, and to dress it; and he gave him a rule of moral conduct, in permitting him to eat the fruit of every tree in the garden, except one, the eating of which was prohibited. We further read, that God brought to Adam the fowls and beasts he had made, and that Adam gave them names; and that when his female companion was made, he gave her a name. After the eating of the forbidden fruit, it is stated that God addressed Adam and Eve, reproving them for their disobedience, and pronouncing the penalties, which they had incurred. In the account of these transactions, it is further related that Adam and Eve both replied to their Maker, and excused their disobedience.

If we admit what is the literal and obvious interpretation of this narrative, that vocal sounds or words were used in these communications between God and the progenitors of the human race, it results that Adam was not only endowed with intellect for understanding his Maker, or the signification of words, but was furnished with the faculty of speech, and with speech itself, or the knowledge and use of words, as signs of ideas, and this before the formation of the woman. Hence we may infer that language was bestowed on Adam, in the same manner as all his other faculties and knowledge, by supernatural power; or in other words, was of divine origin; for supposing Adam to have had all the intellectual powers of any adult individual of the species, who has since lived, we cannot admit as probable, or even possible, that he should have invented and constructed even a barren language, as soon as he was created, without supernatural aid. It may even be doubted, whether without such aid, men would ever have learnt the use of the organs of speech, so far as to form a language. At any rate, the invention of words, and the construction of a language must have been by a slow process, and must have required a much longer time, than that which passed between the creation of Adam and of Eve. It is therefore probable that language as well as the faculty of speech, was the immediate gift of God. We are not however to suppose the language of our first parents in paradise to have been copious, like most modern languages; or the identical language they used, to be now in existence. Many of the primitive radical words may and probably do exist in various languages; but observation teaches that languages must improve and undergo great changes as knowledge increases, and be subject to continual alterations, from other causes incidental to men in society.

A brief account of the origin and progress of the principal languages, ancient and modern, that have been spoken by nations between the Ganges and the Atlantic ocean.

We learn from the Scriptures that Noah, who, with his family, was preserved from destruction by the deluge, for the purpose of re-peopling the earth, had three sons, Shem, Ham and Japheth. This fact, a little obscured by tradition, was returned by our rude German ancestors, to the age of Tacitus.

Japheth was the eldest son; but Shem, the ancestor of the Israelites, and of the writers of the Scriptures, is named first in order. The descendants of Shem and Ham peopled all the great plain, situated north and west of the Persian Gulf, between that Gulf and the Indian ocean on the east, and the Arabian Gulf and the Mediterranean Sea on the west, with the northern coast of Africa; comprehending Assyria, Babylonia or Chaldea, Syria, Palestine, Arabia, Egypt, and Lybia. The principal languages or dialects used by these descendants, are known to us under the names of Chaldee, or Chaldæan, which is called also Aramean, Syriac, Hebrew, Arabic, Ethiopic, Samaritan and Coptic. Of these, the Chaldee, and Hebrew are no longer living languages, but they have come down to us in books; the Samaritan is probably extinct or lost in the modern languages of the country, but the language survives in a copy of the Pentateuch; the Coptic is nearly or quite extinct, and little of it remains; the Syriac, Arabic and Ethiopic are yet living languages, but they have suffered and are continually suffering alterations, from which no living language is exempt.

These languages, except the Coptic, being used by the descendants of Shem, I call Shemitic, or Assyrian, in distinction from the Japhetic. As the descendants of Japheth peopled Asia Minor, the northern parts of Asia, about the Euxine and Caspian, and all Europe, their languages, have, in the long period that has elapsed since their dispersion, become very numerous.

All languages having sprung from one source, the original words from which they have been formed, must have been of equal antiquity. That the Celtic and Teutonic languages in Europe are, in this sense, as old as the Chaldee and Hebrew, is a fact not only warranted by history and the common origin of Japheth and Shem, but susceptible of proof from the identity of many words yet existing, in both stocks. But there is a marked difference between the Shemitic and Japhetic languages; for even when the radical words are unquestionably the same, the modifications, or inflections and combinations which form the compounds are, for the most part, different.

As it has been made a question which of the Shemitic languages is the most ancient, and much has been written to prove it to be the Hebrew, I will state briefly my opinion on what appears to me to be one of the plainest questions in the history of nations. We have for our certain guides, in determining this question—1st. The historical narrative of facts in the book of Genesis, and 2d. The known and uniform progress of languages, within the period of authentic profane history.

1. The Scripture informs us that, before the dispersion, the whole earth was of one language and of one or the same speech; and that the descendants of Noah journeyed from the east, and settled on the plain of Shinar, or in Chaldea. The language used at that time, by the inhabitants of that

plain, must then have been the oldest or the primitive language of man. This must have been the original Chaldee.

2. The Scripture informs us, that in consequence of the impious attempts of the people to build a city and a tower, whose top might reach to heaven, with a view of confounding all nations, the Lord caused confusion among the people, and divided them among the languages, so that they could not understand each other; in consequence of which they were dispersed "over the face of all the earth."

3. If we compare the various names at Babel originated the differences which gave rise to the various languages of the families which separated at the dispersion, then those several languages are all of equal antiquity. Of these, the Hebrew, as a distinct language, was not one; for the Hebrew nation was of posterior origin.

4. All the words of the several great races of men, both in Asia and Europe, which are vernacular in their several languages, and unequivocally the same, are of equal antiquity, as they must have been derived from the common language of the Hebrews. This language, common to the Syriacs and Hebrews, could not have been borrowed from the Hebrew, for the Hebrews originated from the families of Abraham and Abram, several centuries after Syria and Egypt were populous countries. This fact is attested by the Scripture history, which declares that when Abraham's de
descendants, and that of the land of Shinar or the Chaldee must, in the natural course of things, have begun to diverge, soon after the separation; and the changes in each language being different, would, in the course of a few centuries, form somewhat different languages. So in the days of Hezekiah, the Syriac, Arabic, and Egyptian language was a degree, distinct languages. But the language of the Jewish or Chaldee, and to the inhabitants of Palestine and Egypt. But the language, after the Hebrew, the Chaldee and the Arabic, was the common language of the Gothic or Teutonic stock, all originated in the natural course of events; and the differences are as great between the modern Gothic and Teutonic languages of modern Europe, which are evidently the same words as still exist in the Semitic languages, are of the same antiquity; being a part of the common language which was used on the plain of Shinar, before the dispersion.

5. It is probable that some differences of language were produced by the confusion; but neither that event nor any supernatural event is necessary to account for the differences of dialect or of languages, now existing. The differences are as great between a single word, or a few words; but a family of words thus adopted is often the only real bond of connection.

6. Soon after two races of men of a common stock have separated and placed themselves in distant countries, the language of each begins to divide from that of the other, by various means.—1. One tribe or nation will suffer one word to become obsolete and be forgotten; another, will suffer another word to become obsolete and be forgotten; sometimes a whole family of words will be lost; at other times, a part only of other times, a single word only of a whole family will be retained by one nation, while another nation will retain the whole.

7. As Abram migrated from Chaldea, he must have spoken the Chaldee language, and probably, at that time, the Syrac, Arabic, and Egyptian, had not become so different, as to render it impracticable for him to converse with the inhabitants of Palestine and Egypt. But the language of the Hebrews, and of the Chaldee, was the common language of the Hebrews, and of the Chaldee, was the common language of the Chaldee and the Arabic, was the common language of the peoples who peopled the north, in the less cultivated parts of Europe, and to the inhabitants of Gaul; and the races of Celtic origin had overspread the latter countries, before the arrival of the Gothic and Teutonic races, and all Europe had been inhabited by the common language of the Hebrews, and of the Chaldee, was the common language of the Hebrews, and of the Chaldee, was the common language of the peoples who peopled the north, in the less cultivated parts of Europe, and to the inhabitants of Gaul; and the races of Celtic origin had overspread the latter countries, before the arrival of the Gothic and Teutonic races, and all Europe had been inhabited by the common language of the Hebrews, and of the Chaldee, was the common language of the peoples who peopled the north, in the less cultivated parts of Europe, and to the inhabitants of Gaul; and the races of Celtic origin had overspread the latter countries, before the arrival of the Gothic and Teutonic races, and all Europe had been inhabited by the common language of the Hebrews, and of the Chaldee, was the common language of the peoples who peopled the north, in the less cultivated parts of Europe, and to the inhabitants of Gaul; and the races of Celtic origin had overspread the latter countries, before the arrival of the Gothic and Teutonic races, and all Europe had been inhabited by the common language of the Hebrews, and of the Chaldee, was the common language of the peoples who peopled the north, in the less cultivated parts of Europe, and to the inhabitants of Gaul; and the races of Celtic origin had overspread the latter countries, before the arrival of the Gothic and Teutonic races, and all Europe had been inhabited by the common language of the Hebrews, and of the Chaldee, was the common language of the peoples who peopled the north, in the less cultivated parts of Europe, and to the inhabitants of Gaul; and the races of Celtic origin had overspread the latter countries, before the arrival of the Gothic and Teutonic races, and all Europe had been inhabited by the common language of the Hebrews, and of the Chaldee, was the common language of the peoples who peopled the north, in the less cultivated parts of Europe, and to the inhabitants of Gaul; and the races of Celtic origin had overspread the latter countries, before the arrival of the Gothic and Teutonic races, and all Europe had been inhabited by the common language of the Hebrews, and of the Chaldee, was the common language of the peoples who peopled the north, in the less cultivated parts of Europe, and to the inhabitants of Gaul; and the races of Celtic origin had overspread the latter countries, before the arrival of the Gothic and Teutonic races, and all Europe had been inhabited by the common language of the Hebrews, and of the Chaldee, was the common language of the peoples who peopled the north, in the less cultivated parts of Europe, and to the inhabitants of Gaul; and the races of Celtic origin had overspread the latter countries, before the arrival of the Gothic and Teutonic races, and all Europe had been inhabited by the common language of the Hebrews, and of the Chaldee, was the common language of the peoples who peopled the north, in the less cultivated parts of Europe, and to the inhabitants of Gaul; and the races of Celtic origin had overspread the latter countries, before the arrival of the Gothic and Teutonic races, and all Europe had been inhabited by
INTRODUCTION.

the Celts, even to the borders of Sarmatia, has been a question much disputed by historians and antiquaries. The German and French writers generally contend that the Celts inhabited all the north of Europe, as far at least as Sarmatia; but some respectable English writers are of a different opinion. Now it is agreed that they were descendants of the Cumhi, inhabitants of Jutland, and their language bears a strong affinity to the Celtic languages, which still exist; a fact that countenances the opinion of the German and French writers. But the dispute is of little moment; for the Gothic, Teutonic and Celtic tongues being all of the Japhetic stock, migrating from Asia through Asia Minor at different times, and pursuing different courses westward. The first tribes probably sought the warm climates along the north coast of the Mediterranean, and established themselves in Greece and Italy. Others followed the course of the Danube and its satellite streams, and they fell upon the rivers that conducted them to the Baltic. The first inhabitants of Greece and Italy were probably of the Celtic race; but if they were, it is very evident that tribes of the Teutonic or Gothic races invaded those countries before they were expelled, and intermingled with the original inhabitants. The Polasgi may have been among the number. This is an inference which I draw from the affinities of the Greek and Latin languages, with those of Teutonic origin. The Teutonic and Gothic races impressed their language upon all the continent of Europe west of the Vistula, and from that river to the Rhine, or rather to the Seine, anterior to the conquest of Gaul by Julius Cesar. The same races invading and conquering the south of Europe, in the fourth and fifth century, on the downfall of the Roman emperors, impressed their language upon the whole continent of Europe west of the Vistula, and the languages of Teutonic and Gothic origin on the continent. But it remained to be investigated whether the Teutonic races, originally from Persia, inhabited Asia Minor, or were masters of that country. It contains also some words of Gothic origin introduced by the Goths who conquered that country, at the downfall of the Roman Empire. The French also contains some words of Teutonic origin, introduced by the Normans, who, at the time of their invasion, or from the Franks who established the dynasty of the Merovingian Kings in the fifth century, or from the Normans who obtained possession of the northern part of that kingdom in the tenth century.

The German, Dutch or Belgic, Anglo-Saxon, Danish and Swedish languages are of Teutonic or Gothic origin. They are all closely allied; a great part of the words in them all being the same or from the same roots, prefixes or suffixes. There is however a greater difference between the Danish and Swedish, which are of the Gothic stock, and the German and Dutch, which are of Teutonic origin, than between two languages of the same stock, as between the Danish and Swedish. The Norwegian, Icelandic, and some of the languages or dialects of Switzerland, belong to the same stock; but of these I have no particular knowledge.

The Basque or Canabrian in Spain; the Celtic in the north of Scotland, and the Hiberno-Celtic, or native language of Ireland, are the purest remains of the ancient Celtic. From a comparison of a vocabulary of the Greek and Hiberno-Celtic, I find little or no difference between them; and from a long and attentive examination of this language, and of the languages of Teutonic origin, I find less difference between them, than most authors have supposed to exist.

For a language or body of literature in the north-west angle of France, and the Cornish, in the southwest of England, are also of Celtic origin. The Cornish is now extinct; but the Armorics is a living language.

The English as now spoken, is a language composed of words from the Latin, Greek and Teutonic, without any other foreign words. It is however a great mistake to speak of the English as a language composed of words from Latin and Teutonic. The English language is probably their vernacular tongue. It is more nearly allied to the languages of Celtic origin, than to those of the Teutonic and Gothic stock; and of this British language, the Cornish and Armorics are dialects. It has been commonly supposed that the Britons were nearly exterminated by the Saxons, and that the few that survived, escaped into the west of England, now Wales. It is true that many took refuge in Wales, which their descendants still retain; but it cannot be true that the other parts of England were entirely depopulated. On the other hand, great numbers must have escaped slaughter, and been intermixed with their Saxon conquerors. The Welsh words, which now form no unimportant part of the English language, afford decisive evidence of this fact. It is probable however that many English words were borrowed by the common people, for few of them appear in the early Saxons writers.

The English contains also many words, introduced by the Danes, who, for some time, masters of England; which words are not found in the words next following. The English language is probably their vernacular tongue. After the conquest, the Norman Kings endeavored to exterminate the English language, and substitute the Norman. For this purpose, it was ordained that all law proceedings and records should be in the Norman language; and hence the early records and reports of law cases came to be written in Norman. But neither royal authority, nor the influence of courts, could change the vernacular language. After an experiment of three hundred years, the law was repealed; and since that period, the English has been, for the most part, the official, as well as the common language of the nation. A few Norman words however remain in the English; most of them in law language.

INTRODUCTION.

AFFINITY OF LANGUAGES.

On comparing the structure of the different languages of the Shemitic and Japhetic stocks, we cannot but be struck with the fact, that although a great number of words, consisting of the same or of cognate letters, and conveying the same ideas, are found in them all; yet in the inflections, and in the manner of forming compounds and derivatives, there are remarkable differences between the two great families. In the modifications of the verb, for expressing person, time, and mode, very little resemblance is observable between them. If we could prove that the personal terminations of the verb, in the Japhetic languages, were originally pronouns, expressive of the person, number, and the regular masculine plural termination as well as with the Chaldee, Hebrew, and Syriac.

It is justly remarked by Mirford, that a few foreign words, introduced by commerce, or by political and literary intercourse.

Of these, the Saxon words constitute our mother tongue; being words which our ancestors brought with them from Asia. The Danish and Welsh, also are primitive words, and may be considered as a part of our vernacular language. They are of equal antiquity with the Chaldee and Syriac.

and the regular masculine plural termination, as well as with the Chaldee, Hebrew, and Syriac. And it is justly remarked by Mirford, that in the variety of plural terminations of nouns, there is a striking resemblance between the Arabic and the Welsh.

There is one instance, in the modern languages of Teutonic origin, in which we find the Arabic narration: this is the German and Dutch binnen, the Saxon binnen or binnen, signifying within, and Hebrew and Chaldee before, Ar. and the original sense, it is written and pronounced, with the narration, like the Teutonic word.

One mode of forming nouns from verbs in the Shemitic languages is by prefixing m. I know of no instance of this manner of formation, in the Japhetic and the Semitic languages, except in some names which are of oriental origin. Mars is said to be from ap, but if so, the word was undoubtedly formed in the east. So we find Morphes, the god of sleep, to be probably formed with the prefix m, from the Ethipic ṣm, ṣ, to rest, to fall asleep; whence we infer that Morphes is sleep defined.

But as many words in all the languages of Europe and Asia, are formed with prepositions, perhaps it may be found on examination, that some of these prefaces may be common to the families of both stocks, the Japhetic and the Semitic. We find in German, gen, in Dutch, gen, Indo, from mth, mth, mind, mood; in Hebrew, the Hebrew, and in Italian both magia and camagia; belief in Saxon is geleaf, and in German, glaube. We find that in the Saxon languages signifies to fill or be full, and we find in the Arabic signification in Syriac and signifies to remove;
INTRODUCTION.

The prepositions which are used, as distinct words, are called separable prepositions; or, more generally, prepositions - those which are used only in composition are called inseparable prepositions. For the sake of brevity, I give to all words or single letters, prefixed to other words in composition, the general name of prefxes.

One of the best modes of ascertaining the true sense of a preposition, is, to examine its various uses in composition, and discover what effect it has in modifying the signification of the word to which it is prefixed.

Prepositions, used in compounds, often suffer the loss of the sign of a letter, for the sake of brevity, and it is evident that the Saxon amb, and the Gr. in, both in Latin ambi, becomes in affero; con becomes col in colligo; the Gr. ἄγω loses a letter in ἄπασμι, as does acer, in many words.

The following sketch of the principal prepositions and prefixes in several languages of Europe will exhibit some of the affinities of these languages, and in a degree, illustrate the uses of this class of words.

SAXON AND GOTHIC.

And, Sax. and Goth, signifies against, opposite. This is the Gr. ἀν, and Latin ante, not borrowed from the Greek or Latin, but a native word. Examples, andstandan, to stand against, to resist. Andswaran, answer-an, to answer; that is, to speak again, against or in return.

Amb, emb, umb, usually emb, Saxon, signifying about, around; coinciding with the Latin amb, and Gr. ἀμφ. Example, emb-faran, to go around, to walk about; embuant, about; emb, about, and butant, without. See But, p. 155.

Amb, emb, umb, the Gr. and in Latin are inseparable, this is in Gothis ambahdei, and a baffiuf, minister or servant in ambahdu. The Germans have the word contracted in amb, charge, office, Dutch ampt, Dan. ambt. The Gothic orthography gives rise to the question whether amb, emb, and ort, Sax. and Goth, and are not radically the same word; and it is very certain that the Gr. ὁμπρίες, and he in host forbids, further, it is written bi, by, and be, being contractions of big. The primary and principal signification is near, close; as “stand or sit by me.” So in the word by-stander. It is a prefix of extensive use in the Saxon, German, Dutch, Danish and Swedish. Its use in denoting instrumentality, may be from the sense of nearness, but more probably it is from passing, like per, through, or it denotes proceeding from, like of, as salvation is of the Lord.

For, in Saxon, as in English, is a prefix and preposition of extensive use. In Saxon, for signifies a going, from, to, or in return. It is radically the same word as for, in the sense of in front, before. Its primary sense is advancing; hence moving towards; hence the sense of in, or of that, of opposition, or negation. See the preceding remarks.

Mis, a prefix, is the verb miss, to deviate. It is used in Saxon, German, Dutch, Swedish and Danish, in nearly the same sense, as in English. It seems to have the same origin as mid, middle, amidst. In the Gothic it is used as a prefix.

Mis, a prefix, is the verb misas, to deviate. It is used in Saxon, German, Dutch, Swedish and Danish, in nearly the same sense, as in English. Its radical sense is to depart or wander.

Of, is a Saxon prefix and preposition of extensive use in the Saxon, as in English. It denotes primarily issuing; or proceeding from; hence separation, departure. And when used in the latter sense, it is written off. It is the Latin ob, written by the early Romans of; the Gr. ὀπέρ, the German ab, the Dutch; Dan. and Sw. af. The Saxons often prefixed this word, in cases where we use it after the verb as a modifier; as of-defgan, to drive off; as it is still used of the English off. It is identical with the Latin ad off, and spring off, and of the Latin ad spring. As it denotes proceeding from, it is the proper sign of the genitive case; the case expressing production.

Ofer, Eng. over, Goth. ofer, G. über, D. over, Dan. over, Sw. ower, is a prefix and preposition of extensive use in the Teutonic dialects, and in the Gothic languages, which I have not retained in English. It seems to have the same origin as mid, middle, amidst. In the Gothic it is used as a prefix.

On, is a Saxon prefix and preposition of very extensive use. It is obviously a different orthography of in, and it is used for in, in the Saxon, as “on continent,” in the beginning. It has also the sense we now give to on and upon, with many modifications of signification.

In composition, it signifies into, in, in a, as on-blown, to blow in; on, on, on, to adhere to; to, to cleave to; and it is also a particle of negation, like un, as un-bonder, to unbend. This on is only a different spelling of un, in Dutch on, German un, used as a word of negation. The Gothic has un and, in the like sense, as the Danish have the D. out. In this sense it has the same signification, as in Dutch out, and as this is sometimes written and in Gothic, as in is written ind, in Danish, there can be little doubt, that in, on, un, are all from one stock. The original word may have been hon, hin, oræ, such loss of the first letter is very common; and such, from the Ch. and Heb. ידוע, presents us with an example. See in and off.

The Greek has ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as well απαρ, απαρ, ἐπαρ, ἐπαρ, ἐπαρ, and ἐπαρ, probably from the same root, as wel
INTRODUCTION.

To, is a preposition and prefix of extensive use in our mother tongue. It occurs as a prefix, in such words as, to-brace, to break; to-beran, to bring or bear, [ad-ferre]. We retain it in, and use in the same manner. The Danes and Swedes write it under, and use it in the same sense.

Up, is a Saxon prefix and prefix of considerable use, in the present English sense. The Germans write it under, and in Danish, and use it in the same manner. The Danes and Swedes write it under, and use it in the same sense.

Us, in Gothic, is a preposition and prefix. This is the German aus, and equivalent to the Latin ex. It is the Saxon uf, the English out, Dutch uit, Swedish ut. It is derived from the germ form, united with the Dutch op, the Danes and Swedes up, and all use it in the same sense.

With, in Saxon, from the root of with, denotes against, or opposition. It is a prefix in Saxon, written in German, with, wither; in Dutch, weder; Dan. and Swedish, vider, but retained in the old law term, witterum, a counter-taking or distress.

In the German language, there are some prefixes and postpositions not found in the Saxon, as, Ent, denoting to take out, away. Er, without, out or to. Dan. er.

Nach, properly nigh, as in nachbar, neighbor; but its most common signification in composition is after, as in nachgeben, to go after. This sense is easily deducible from its primary sense, which is close, near, from urging, pressing, or following. In Dutch, this word is contracted to na, as in naeber, neighbor; naa, to follow. The Dutch has a prefix, of extensive use, and probably the same word. This fact suggests the question, whether the ancestors of these great families were then and not their residence in the same or an adjoining territory. It deserves also to be considered whether this na, is not the Shemitic i, occurring as a prefix to verbs.

Weg, is a prefix used in the German and Dutch. It is the Saxon, German, and Dutch weg, going; in the sense of away, or passing from, from the verb, in Saxon, wegen, wegian, to carry, to weigh, Eng. to wag, the sense of which is move or pass; as Ger. wegfallen, to fall off or away.

Zer, in German, denotes separation. In the Gothic dialects, Danish and Swedish, fes is used as a prefix. This is the Scottish fra, Eng. from, of which it may be a contraction.

From in Swedish, and frem in Danish, is also a prefix. The primary sense is to go, or proceed, and hence it denotes moving to or towards, forth, &c. As in Danish, fremforer, to bring forth; fremkalder, to call for. But in English, not tidy. It is probably a contracted word.

In, upon. Whether this is allied to be, by, and the Russ. po, I shall not undertake to determine, with confidence; but it probably is the same, or from the same source.

Samman, signifying together, and from the root of assemble, is a prefix of considerable use in both languages. It answers to the Saxon sam, samord, equivalent to the Latin con or cum. It seems to be allied to same and the Latin sin.

Till, both in Danish and Swedish, is a prefix, and in Danish, of very extensive use. It is equivalent to the English to or towards, and signifies also at, in, on, by, and about, and in composition often has the sense of back or re, as in tilbage, backwards, that is, to back; but generally it retains the sense of to move towards, as in tilbuder, to offer, that is, to speak, or order to do; tildriver, to drive on; tilgiver, to allow, to pardon, that is, to give, to and hence to give back, to remit. This is the English till, which we use in the same sense as the Danes, but in English it always refers to time, whereas in Danish and Swedish, it refers to place. Thus we cannot say, We are going to the till town: but we say, wait till I come, till my arrival; literally, wait to I come, to my arrival; that is, to the time of arrival. The difference is not in the sense of the prefix, but in its application.

The Scotch retain the Danish and Swedish use of this word; no slight evidence of their origin.

U, in Danish, the Swedish o, is a prefix, equivalent to in, and is used as a privative or negative; as in water, an unmeasurable year; udefrig, unevil.

RUSSIAN.

To or re, signifies in, at, by, and may possibly be from the same root as the Eng. be, by. But see po.

To, is a prefix signifying for, on account of, by reason of, after, as zu-rhyth, to easy, from-vid, visage; vju, to see, Lat. vides, zdrayu, from deru, to test; zariruyu, to be astonished or stupefied, from the root of Lat. miror, and Russ. mir, peace; miruyu, to pacify, to reconcile, mirir, pacify; zarunure, peace, pacification; zariruyu, to make peace; Arm. mi-neret, to hold, to stop; the radical sense of wonder, astonishment, and of peace.

Po, a prefix signifying to, towards, for.

Ya, a preposition and prefix, signifying in, upon, at, for, to, seems to be the Ger. nach, Dutch na, as in nagrede, recompense; na, and the root of Lat. gratia; nasiduyu, to sit down, &c.

Nd, a prefix, signifying above or upon.

O, a prefix, signifying of or from, and for.

Po, a prefix and prefix of extensive use, signifying in, by, after, from, with, even, to pay, to give, to polagayu, to lay, to, to expend, lay out; to tax or assess; to establish or fix; to believe or suppose; to lay and. This corresponds with Eng. by, and the Latin has it in possideo, and a few other words. [Sax. besittan.] Pomen, remembrance, pono, and mens, mind.

So, a preposition and prefix of extensive use, signifying with, of, from.

And as a mark of comparison, it answers nearly to the Eng. so or as.

Y, with the sound of i, is a preposition and prefix of extensive use. It signifies near, by, at, with, as hereby, to put in order, to adjust, to cut, to reap, to mow, to dress, Fr. parer, Lat. para, ugodia, satisfaction; ugoditi, good, useful, Eng. good; utod, a dale, from dol.

WELSH.

The prefixes in the Welsh Language are numerous. The following are the principal.

Am, about, encompassing, Sax. amb, Gr. amb.

An. See Sax. in.

Cy, cyd, euy, eym, implying union, and answering to cum, con and co in Latin. Indeed cyd, written also eym, seems to be the Latin cum, and cy may be a contraction of it, like co in Latin. Co seems also to be a prefix, as caboli, to polish, Lat. polio.

Cynd, cynt, former, first, as if allied to begin.

Dy, negative and privative.

Dis, negative and precise.

Dry, iterative.

E, &c. adverbial.

Ed and eit, denoting repetition, like re. Sax. ed, oth.

Es, separating, like Lat. ex. See ys.

Go, extinguating, inchoative, approaching, going, denotes diminution or a less degree, like the Latin sub; as in gobrid, somewhat dear. This seems to be from the root of English go.

Hin, expressive of origination.

Lled, partly, half.

Oft, all.

Rhag, before.

Rhau, excessive.

Tew, over, beyond. Lat. trans.

Try, through.

Yni, mutual, reflective.

Most of these prepositions, when used as prexes, are so distinct as to be known to be prefixes.

But in some instances, the original preposition is so obscured by a loss or change of letters, as not to be obvious, nor indeed discoverable, without resorting to an ancient orthography. Thus without the aid of the Saxon orthography, we should probably not be able to detect the component parts of the English thow. But in Saxon it was written edwitan and otherwise; the preposition or prefix oth, with othuain, to disallow, reproach or cast in the teeth.

It has been above suggested to be possible, that in the Shemitic languages, the 1 in triliteral roots, may possibly be from the same source as the Russian na, the Dutch no, and German nach. Let the reader attend to the following words.
To look; to behold, to regard. The primary sense of look, is, to reach, extend, or throw.
Ch. To look; also to bud or sprout.
Ar. ٌٌّ To spring, or issue as water; to flow out; to devise or strike out; to draw out.

If the first letter is a prefix, the Hebrew word would accord with Lat. video; the Chaldee, with video and with butl, Sp. botar, Fr. boutter, to put, and Eng. to put, and Fr. bout, ending, from shooting, extending.

Ar. ﷃ To bud; to germinate. See Ch. supra.

Heb. י To fall; to sink down; to wither; to fall off, as leaves and flowers; to act foolishly; to disgrace. Derivative, foolish; a fool; "לי To make fail; to defeat; that is, to throw or put on.
Ch. ﷂ To shoot, as an arrow; to draw as to a camel; except also to die, that is probably to fall.

Can there be any question, that fall, foul and fool are this very word without the first consonant? The Arabic without the first consonant agrees with Gr. ἔδρα, and the sense of falling then, is to throw one’s self down.

Perank. That these words are thus formed, I do not know; but there is truth of this conjecture, before I had received Owen’s Dictionary of the Welsh language. An examination of this work has confirmed my suspicions, or rather changed them into certainty.

A preposition, it coincides very closely with the Russ. and Dutch na, and the latter we know to be a contraction of the German nach. Now the German ist, that a vast number of words are formed with these prefixes, on other words, or the first consonant is a mere adventitious addition; for they are used with or without the first consonant.

The following instances, from a much greater number that might be produced, from Owen’s Welsh Dictionary.

Blanc, a colt, from lama.

Bith, milk, from lith.

Bliant, fine linen, from bient.

Plad, a flat piece or plate, from lled.

Pled, a principle of extension, from lled.

Pleden, a bladder, from pledge, that distends, from lled.

Plath, a braid, from lith, Eng. plant.

Pliciaceum, to pluck, from lig.

Ploc, a club, from lloc; plociaw, to block, to plug.

Flueug, a plunge, from living, our vulgar lounge.

Glieth, a glutton, from eth.

Glas, a blue color, verdancy, a green plat, whence Eng. glass, from las.

Glyd, glutten, glue, from lig.

Cloer, clear, from floer.

Ch. by prefixes, as in the Welsh.

Ctepa, a club, from lloc.

Chet, a piece, a claw, from lled, lled.

Clamp, a mass, a lump.

Cledyr, a board or shingle, whence cledaw, lattice, from lled.

Brut, Eng. bran, from bran; rahn, to rend.

Brid, a breaking out, from rhad.

Bros, noise, tumult, a break; from rhoc.

Brow, from anger, brow, to chafe or fret, from browce, a boiling or ferment, from rheue, something rough, a grunt, Gr. βρεχω.

Bryd, what moves, impulse, mind, thought, from rhad.

Bres, quickness, bresicinon, to hasten, to shoot along, from rhes, Eng. to rush, and crisyson, to hasten, from rhes, to rush. [Here is the same word rhes, with different prefixes, forming bresiason and crisyson. Hence W. bryg, bresig, bresy, bresi.

Grez, [pronounced grath,] a step, a degree, from rath, Lat. gradus, gramin.

Greg, a cackling, from rhog.

Gren, a cracking, gnash, a murm, gremian, to crack or gnash, from rhen. Hence Lat. frena, Gr. βρέχω.

Greg, a step, a degree, from rath, Lat. gradus, gramin.

Grem, a crashing, gnash, a murm, gremian, to crack or gnash, from rhen. Hence Lat. frena, Gr. βρέχω.

We have some instances of similar words in our own language; such flag and log; flap and lap; clamp and hump.

There is another class of words which are probably formed on a different kind. I refer to words in which s precedes another consonant, as in Welsh, toen, slip, slide, sluggish, smoke, smooth, speed, spin, stage, steep, stem, swell, spout. We find that tego, to cover, in Latin, is in Greek κτης; the Latin fullo, is in Greek φαλαξ. We find μαγνης.

I do not follow Owen to the last step of his analysis, as I am of opinion that, in making monosyllabic words to be compound, he often errs. For example, he supposes brog a tumult, to be from rhy, a broken or rough utterance; a grunt or groan; and this, to be a compound of rhy, excess, what is over or beyond, and gro, a forcible utterance, a grunt. I believe rhy to be a primitive uncompounded word, coinciding with the English rough.

Owen supposes plad, a flat thing, a plate, to be from lled, with py. Lled, he explains, what is given, a gift, good things, and py, what is inward or involved. I have no doubt that the first letter is a prefix in plad, but beyond all question, lled is from the same root as lled, breadth, coinciding with Lat. latus; both from a common root signifying to extend. But I do not believe lled or lled to be compound words.

Dug, a dudge, Owen supposes to be formed on mg, over, that cannot be true, unless the Latin dux, ducat, are compounds. Dur, steel, he derives from ur, extreme, over, but doubtless it is from the root of the Latin durus. So par, signifying what is contiguous, a state of readiness or preparation, a pair, fellow, or match, Owen makes a compound of py, and ar, as above explained, and ar, a word of various significations, on, upon, surface, &c. But there can be no doubt that par is from the root of the Latin paro, to prepare, being the Latin par, equal; the root of a numerous family of words not only in the Japhetic languages of Europe, but in the Semitic language. It certainly is not a Welsh compound, nor is there the least evidence to induce a belief that it is not an uncompounded word.

Had the learned author of the Welsh Dictionary extended his researches to a variety of other languages, and compared the monosyllabic roots in them with each other, I think he would have formed a very different opinion as to their origin.
INTRODUCTION.

We find the Welsh ysbrig, the English sprig, is a compound of ys, and brig, a shoot or twig, and it may be inquired whether the English shred, shire, is not from the same root as the Hebrew shad, to shake, or Arabic, to shake roughly, is from the root of Lat. scacca, to shake, Sax. sceacan. This may be the English shake; Sax. sceacan. We retain the Welsh crecia, to shriek, in our common word, Lat. raucus. Here we have the whole process of formation, from the root to slacken, from Uag, slack, sluggish; allied to Eng. lag and slow.

Lat. crenare, to expel, from pel. Ball may be from the same root. Ysbrinc, a finch, from pinc, gay, fine brisk; a sprig, a finch.

Lat. creta, a stone; from the root of creare, to create, to form. Yspin, a spine, from pin, pen.

Lat. crassus, thick, dense; from the root of crisare, to crock, to crack the horns; scrostare, to pull off the crust, and a great number of others.

Now in the same manner of forming words with this prefix has actually prevailed among the nations of Europe, we may rationally suppose that many English words, and perhaps all of this class, are thus formed. Any English and other Teutonic and Gothic words are thus formed, appears to be certain.

These facts being admitted, let us examine a little further. In Russ. srebelva is a wedding. Is not this formed on the root of offend, with s for a prefix? Svara is a quarrel. Is not this formed on the root of vary, variance, or svara? Svarabba is a wedding. Is not this formed on the root of wed, with s for a prefix? Svarabba is a wedding. Is not this formed on the root of wed, with s for a prefix? Svarabba is a wedding. Is not this formed on the root of wed, with s for a prefix?
INTRODUCTION.

CHANGE OF ARTICULATIONS, OR CONSONANTS.

The articulations, letters which represent the junctions or joinings of the organs employed, are called consonants. All these are convertible and frequently converted into their cognates. The English word bear represents the Latin fero and pario, and fero is the Greek φέρω. The Latin reatus is wind in English; and habeo is have. The Latin dens, in Dutch, Danish and Swedish is tand; and danc is English is in German Zahn.

These changes are too numerous to require a multiplicity of examples. But there are others less common and obvious, which are yet equally certain. Thus in the Anglo-Saxon or Hiberno-Celtic, m and n are convertible with r, as in English, and in Welsh, with s.

In the Chaldean and Hebrew, one remarkable distinction is the use of a dental letter in the former, while the latter has a sibilant. As in English, so in Hebrew, but the Hebrew, while changing the vowels of the root, keeps the same consonants, as for example, kaph, signifying the mouth, and gau, signifying the haw. In Hebrew, the word with the same consonants, and in Arabic, is the same as laudo, and the same as lat, to speak.

The Russian change of the d of a noun into the sound of j, or the sound of h, is the same as the English, and in Italian, the sound of s, is the sound of s in English.

In the South of Europe, the Greek, as in the South of England, and the Spanish, in the South of France, have made use of the letter f, and the French, in the South of Italy, have made use of the letter v, the English, in the North of England, have made use of the letter w.

In the South of Europe, the Greek has changed the sound of t, into the sound of s, in the South of England, the sound of s, into the sound of t, in the South of France, the sound of t, into the sound of s, and in the South of Italy, the sound of s, into the sound of t.

The Teutonic nations have often used h to express the power of the Greek z, and the Latin c, as for χειρ, horn of corn. Hence we find that the Saxon hini, plowman or hynian, to lean, is the Greek εἶχω, Latin elix. The letter l is now dropped and we write the word elia.

In like manner, the Saxon hild, which we now write mild, is from the same root as the Latin claudo, clutudo, the Greek κλαύω, which is contracted into κλέω. And in this word we may notice another fact, that the word signifies not only to shut, but to praise or celebrate, proving that this word and the Latin plaudo, are the same, with different prefixes, the same as laudo, and that the primary sense is to strain. This in Saxon appears in biald, loud, and in Latin, it has been converted, as hordum for fœlrum; and the Spaniards now write hore, as for hæver for hœver; and hillo for filium; herif for ferire, &c.

2. CHANGE OF VOWELS.

The change of vowels is so common, as to occasion no difficulty in determining the sameness of words; indeed little or no regard is to be had to them, in ascertaining the origin and affinity of languages. In this opinion I accord with all writers on this subject; but the opinion of that elegant scholar, Sir William Jones, who protests against the licentiousness of etymologists, not only in transposing letters, but in totally disregarding the vowels, and seems to admit the common origin of words only when written with the same letters, and used in a sense precisely the same.¹

INTRODUCTION.

I am not at all surprised at the common prejudice existing against etymology. As the subject has been treated, it is justly liable to all the objections urged against it. It is obvious that Sir W. Jones, who gave very little attention to the subject, and that some of its most common and obvious principles had escaped his observation. His opinion with regard to both articulations and vowels is unequivocally erroneous, as will appear from the following list of words, taken from modern languages, and respecting the identity of which, that gentleman himself, if living, could not have the slightest doubt.

draw, drag, dragen, trekken, tragen, draga, traho.
give, giben, geven, geben, giva, pate.
good, godt, goed, goed, baa, bon.
foot, fot, fot, voet, fuss, fot, pes.
feet, fott, voet, fuss, pata, pes.
food, foc, haae, haken, hake, hac.
hour, hose, aar, houre, jac, hore.
hook, hoeck, hooken, luiken, top, toek.
have, habban, hebben, haben, halva, habeo.

[Fr. avoir, as, as, avos, avez, on.]
INTRODUCTION.

Obtaining the real origin or true orthography which cannot be ascertained by another. But doubtless many changes have taken place of which the evidence is lost. In such cases the etymologist is in danger of interpreting the language of the ancients. For not only do the early lexicographers indicate the loss of letters by a mark, which would be impossible now to discover the original orthography, or to trace the connection of words with other languages, in a large portion of them. And it is with regret we observe the influence of the German, Dutch, and to a certain degree, extending itself to other countries. It is owing to the most serviceable obscurity of nations, that Basle or Basel, the elegant name of a town in Switzerland, has been corrupted to Basel, and pronounced most barbarously bale. The German schreibe, whence the French ecrire, or the Latin scribere, is slightly, or a is sal, salt. The latter in some considerable degree has been obscured, and thus obscured or rather destroyed the affinity between the Italian and the Latin words.

Another difference of writing and pronouncing, has been produced by the change of a similar letter into an aspirate, or conversely, by the change of an aspirate into a sibilant. No person doubts whether the Latin super is the Greek ευρίκος; or γενέκος is similis; or a is sal, salt. The latter in some cases, as in badge, badge, badge, has been obscured by the change of a sibilant letter into an aspirate: or e converso, by the change of an aspirate into a sibilant. INTRODUCTION.

Another cause of obscurity in the affinities of languages, and one that seems to have been mostly overlooked, is, the change of the primary sense of the radical verb. In most cases, this change consists in a slight deflection from the literal sense, and the figurative only is retained. The first object, in such cases, is to find the primary or literal sense, from which the various particular applications may be easily deduced. Thus, we find in Latin, liber, liber, or liberum, to be free; and in English free, free, free, free, free, free, free; in German, on the contrary, the word frey, or free, or frei is used in modern writing, as in the French gare, a guard; garde, for guard. This difference of orthography makes it difficult, in some cases, to ascertain the true radical letters.

INTRODUCTION.

The Saxon care, care, cervein, to care, to cark, is connected in origin with Latin cura, a care, a concern, a prison; both from the sense of straining, whence holding or restraint.

To prove how the primary general sense of a word may ramify into different senses, by special appropriation of the word among separate families of speech, let us observe the different senses in which lay is used by the English, and by the nations on the continent. In English, to lay is simply to spring; as, to lay a yard; to leap over a fence. But on the continent it signifies to run. Now it will be seen that this word has two general significations; for some nations have been unable to translate it by one word, but it is by the same word, into English. 

Take for illustration the following passage from Luther's Version of the Scriptures. 1. Sam. xviii. 17. "Nimni par auf die brüder diese epha singen, und diese zehen brod, und laufi ans hee zu den krämerin."

Take now for thy brethren an ephah of this parched corn, and these ten loaves, and leap to the camp to thy brethren. Lay, instead of run, is good German, but bad English. There are two other words in this passage, of which a like remark may be made. The German brod, loaves, is our bread, which admits of no plural; and sangen is our singed, which we cannot apply to parched corn.

So in some of the Teutonic languages, to wearp kittens or puppies, to wearp eggs, is correct language, though to our ears very odd; but this is only a particular application of the primary sense, to throw. We say to lay eggs, but to lay is to throw down.

By this comparison of the different uses and applications of a word, we are able, in most cases, to detect its original signification. And it is by this means I apprehend, that we may arrive at a satisfactory explanation of the manner in which the same word came to have different and even opposite significations.

It is well known, for example, that the Hebrew word של, is rendered, in our version of the Scriptures, both to bless and to curse. The propriety of the latter rendering is controverted by Parkhurst, who labors to prove, that in Kings and in Job, where it is rendered, to curse, it ought to be rendered, to bless; and he cites, as authorities, the ancient versions. It is true that in 1 Kings xxi. 10. 13; and in Job i. 11, and ii. 5, the seventy have rendered של, without the preposition. It signifies a sending out; utterance; a gift or present; a consigning; a ban, a curse or imprecation. להג, to give; to consign; to curse. From לה is formed היג, a greeting, or salutation, [the very Hebrew and Chaldee wordプリ, a precept, a sermon, andプリ, to teach or to undertake. The sense in Scripture is to utter words either in a good or bad sense; to bless, to salute, or to rail, to scold, to reproach; and this very word is probably the root of רפה, as it certainly is of the Latin precur, used, like the Semitic word, in both senses, pngying and cursing, or deprecating. It is also the same word as the English prayer, L. pripre, J. precur, the same as precon, D. prechen, W. pregeth. To the same family belong the Gr. πράξει, πράξεως, to pray, to roar, to low, Lat. rugio. Here we see that pray is the same word, applied to the voice of the ass and in breaking in a murrain, and both are radically the same word as break.

The sense of kneeling, if radical, is to throw, and if from the noun, the sense of the noun is a throwing, a bending.

The Chaldee sense of digging, if radical, is from thrusting in an instrument, or breaking the ground; but perhaps it is a sense derived from the name of a shoot or cion, and in reality, to set a shoot, to plant. The Syriac use of this word in Matthew xv. 19, is intrinsically, to issue, to shoot or break forth. So in Arabic, to rush on, to assault. The sense of firmness in Arabic is from setting, throwing down, as in kneeling; and hence the sense of breast, the fixed, firm part. That this word has the sense both of blessing and of cursing or reproaching, we have demonstrative evidence in the Welsh language. רהג, in Welsh, breg signifies to break; breg, a breach, a rupture. This Owen deduces from bar, but no doubt erroneously. It is from רהג, and there is some reason to think that break is from רהג, rather than from ברג, but probably both are from one radix, with different prefixes.

We observe one prominent sense of the Arabic ברג, baraka, is to rain violently; to pour forth water, as clouds. This is precisely the Greek πράξει, a word found in all the Teutonic and Gothic languages, but written without or with its prefix.

הברג, Saxon, rega or regn, rain; regg, to rain. Dutch, regen, rain; reggen, beregenen, to rain upon. German, regen, rain; reggen, to rain; beregenen, to rain on. Swedish, regn, to rain. Danish, regn, rain; regnen, to rain.

In Welsh, breg signifies to break; breg, a breach, a rupture. In the latter sense, usually from ברג, Hebrew and Ch. ברג. From the English precon, the same as preach, D. preken, W. pregeth. To the same family belong the Gr. πράξει, πράξεως, to pray, to roar, to low, Lat. rugio. Here we find that pray is the same word, applied to the voice of the ass and in breaking in a murrain, and both are radically the same word as break.

Pursuing the inquiry further, we find that the Saxon recan, or recan, [W. rugh], signifies to speak, to tell, to relate, to recount, the primary sense of which last is to speak or tell; also, to rule, which shows this to be the Latin regno; also to care, which is the English rea. That this is the same word as una, we know from the Danish, in which language, regner signifies both to rain and to reckon, to tell, to count or compute. In the German, the words are written a little differently; rechen, to reckon, and regnen, to rain. So in Dutch, reckenen and regenen; but this is a fact by no means uncommon.

Here we find that the English reckon and reck and the Latin regno are the same word. The primary sense is to strain, to reach, to stretch. Care is a stretching of the mind, like attention, from the Latin tendo, and restraint is the radical sense of governing. Hence rectus, right, that is, stretched. Hence we find that rain and the Latin regnum, reign, are radically the same word.

Now in Saxon recan, or rotten, is the English reach, to stretch or extend, from the same root, and probably rock; Saxon recan, recan, to fence or secure for this is to send off.

I might have mentioned before, that the Chaldee רג, a cion or branch, is precisely the Celtic word for an arm; Irish brat, or rough; Welsh brat, whence the Greek βραχoς, the Latin brachio, whence the Spanish brazo, French bras and English brace. The arm is a shoot, a branch, and branch is from this root or one of the family, n being casual; branch for brace.
INTRODUCTION.

On this word, let it be further observed, or on ἴσος or ἴπτομαι, if radically different, are formed, with the prefix ἴ-, the German sprechen, to speak; sprechen, speech; Dutch spreken, spraak; Swedish språka, spåk; Danish sprog, speech; and Swedish spricka, to break; Danish sprokkek. The same word with ἴ is casual in spring, the breaking or opening of the winter; and here we see the origin of the marine phrase, to spring a mast, springing the mast. This in Swedish is written without ἴ, sproka, to break, burst, split; but a noun of this family has ἴspringor, a crack, and ἴspringor, a spring, running.

Now let us attend to other Semitic words consisting of cognitive elements.

Chaldee. ἴπτομαι To rub or scrape; to rub out or tread out, as grain from the ear or sheaf; Latin fricto, frictus.

2. To collect and bind, as sheaves; perhaps English, to rake.

3. To break or break down.

4. To question; to doubt. In Saxon and Gothic fragan, frago, signifies to ask.

Deriv. Froward; perverse. Prov. xii. 25. So in English refractory.

This verb is not in the Hebrew; but there are two derivatives, one signifying the upper wall of the temple; so called probably from its use in breaking, that is, interrupting access, or separation, like diaphragm in English. The other derivative is rendered rigor, or cruelty; that which strains, opposite to the German drops the first letter and has ringen, both to twist or wind and to ring or sound; the latter sense from straining or throwing, as in other cases. Without ἴ, wringor would be wrig, and wringor; wringor, wringor.

Dan. νδργον.

In Greek, ἴπτομαι is a blanket or coverlet, and connected with πυγμα, that is, spread, from stretching, or throwing over.

We find also among the Chaldean derivatives the sense of a neck, and a joint. Now we find this word in Irish, bráigh, the neck; in Greek, without ἴ, πυγμα, the neck; in Gothic, the neck. So in Dutch, the neck; English, the rack, and from the Greek, the ρέκτες, from distortion.

Coinciding with the Greek πυγμα, to break, we find in Welsh rhugog, to break, and coinciding with πυγμα, a rock, a crag, Welsh, crag, and connected with these, the Saxons hræcon, English, the rack, that is, broken; evidently the base of a verb of this family.

Hence we find the senses of distortion and breaking connected in this root, in a great variety of instances.

The Semitic ἴπτομαι, to lighten, to shine or flash, is one of this family. The sense is to shoot or dart, to throw, as in all like cases. And under this root, the Arabic has the sense, to adorn, as a female; to make bright or shining; which gives the English prank and prank, D. prægti, G. prachti. France is of the same family, from leaping, starting, darting up.

Here desire and irrigation are both from one root; desire is a reaching forward, and irrigation is a spreading of water.

This root, in Hebrew πυγμα, signifies to weave, or connect as in texture and net work; but the primary sense is to stretch or strain.

In Arabic, the same verb ἴπτομαι signifies to emit an agreeable smell; to breathe fragrance; radically to throw or send out; to eject; a mere modification of the same sense. In Greek, πυγμα signifies a neck, and a joint; and irrigation is a spreading of water.

In Chaldee, ἴπτομαι is a neck; a joint; the neck of the fowls, &c.; the ankle; the joint of a reed, a chapter, or section of a book; explanation; exposition. ἴπτομαι, a rupture, coinciding with the English broke.

Syr. ἴπτομαι To rub, so rendered, Luke vi. 1. Lat. frictus. A derivative signifies to comminate.

Deriv. Distortion; winding; twisting. Let this be noted.

Ar. ἴπτομαι To rub, Lat. fricto.

2. To hate, as a husband or wife; to be languid, or relaxed.

Heb. p-yo To break, burst, or rend; to break off; to separate.

Syr. ἴπτομαι To redeem.

Deriv. A recess, or withdrawing; separation; liberation; redemption; safety; vertebrae.

Sam. The same as the Syriac verb.

Ar. ἴπτομαι To separate; to divide; to withdraw; to disperse, [qu. Lat. springor] to lay open; to disclose; to cast out; to immerse.

Deriv. Distinction, distinction; distinction; distance; interval; dispersion; aura; as we say, the break of day; also, a garment reaching to the middle of the thigh, qu. frock; also breech.

πυγμα has these two words together, because I am convinced they are both one and the same, completely on the same radical word. The latter coincides exactly with the Latin frango, frugi, fractum, for n in frango, is undoubtedly connected with πυγμα, yet doubtlessly b is the English break, the German brechen, the Dutch breken, &c. In truth, the three words πυγμα, ἴπτομαι, and πωγμα are probably all from one primitive root, formed with different prefixes, or rather with the same prefix differently written; the different words bearing appropriate senses, among different tribes of men.

We observe in the Chaldee word the sense of questioning. Perhaps this may be the Gothic fragan, to ask, and so, it coincides with the Latin rogue, the latter without the prefix. In the sense of break, we find in the Greek πυγμα, without a prefix.

Most of the significations of these verbs are too obvious to need illustration. But we find in the Syriac the sense of distortion, a sense which at first appears to be remote from that of breaking or bursting asunder. But this is probably the primary sense, to strain, to stretch, a sense we retain in the phrase, to break upon the wheel, and by dropping the prefix, we have the precise word in the verb, to rack.

Now if this is the genuine sense, we find it gives the English wreck and wreack, the Danish vrag, Sw. vrag, a wreck. In Saxon, wrecan, wrecan, is the English wreck, that is, to drive, or throw on; wrecan, an exicle, a wrecker. This makes the sense to reject; Sw. wragen, to throw away; the idea of driving a force, and that wreack is connected with break is probable for another reason; that the Latin fractus, frango, forms a constituent part of naufragium, the English shipwreck, which in Danish is simply vrag, a wreck. Now this is one of the senses of this root, the English vring, vring, Danish vrag, Sw. wring, may be deduced from it, un

probably n is not radical in these words. The Dutch have vringen, but the German drops the first letter and has ringen, both to twist or wind and
These different renderings show the importance of understanding the literal or primary sense of words; for whatever may be the real sense in the passages above mentioned, it cannot be to inimical. If we are to give to any one word, by translating it, he stilleth; he stilleth the sea and its waves are tumultuous, or he stilleth the sea that the waves may roar or be agitated! This will not answer. The more rational version would be, he roughens the sea, and its water doth roar, or he drives, or he6teenth the sea, and its waves are tumultuous; and this is undoubtedly the Latin rigor, and with a prefix, frigo, and this significance is perhaps allied to Lat. rugo, to wrinkle; for as a general rule, the radical sense of wrinkle is to draw, as in contract, exitraho, and thus seems to be the sense of rigor. Both these words are allied to rough, which is from breaking or wrinkling. This sense would perhaps well suit the context in these two passages, as it would also in Job vii. 5: My skin is rough.

Now in Arabic, the general signification of {\textit{je}} is to return, to repeat, to withdraw, which may be from drawing back; a different application of the original sense, to strain, stretch, or extend. The root {\textit{je}} signifies to spin, and this is probably the Latin rictus, somewhat varied in application. The same verb in Arabic {\textit{je}} signifies to drive off, to shoo, or shoot long as teeth, to strain, purify, or make clear as wine; precisely the English to rack; also to spread, and to pour out. Hebrew {\textit{je}}, to empty, to draw out, to attenuate, or make thin, and as a noun, spittle; Syriac, to spit, to draw out, to attenuate; Semitic, to pour out, to drag out, or draw out; and Ethiopic, to be fine, slender, or thin; Arabic, to be soft, tender, thin. The verb {\textit{je}} has a like significance, and is perhaps from the same original root. Hebrew, to spread, stretch, extend. But, says Castle, all the ancient interpreters rendered the word, to ordain, or to establish, or to make firm; to stretch, or to extend; but the sense is to stretch, to spread, and the meaning is only the means of extending. Hence {\textit{je}} is the firmament, which agrees well with Lat. regio, an extent; in Hebrew, properly an expanse. And to reconcile Hi{	extendash}zi strength and firmness are usually or always from stretching, tension.

Now let us hear Ainsworth on the word regio. "Regio a rego quod regio quad praequisrim provinciae furent, regiones sub regibus enante atque ab his regabantur. How much more natural is it to deduce regio from the primary sense of rego, to throw or project, to stretch, to strain, or extend! Regio is an extent, a word of indefinite signification. In Chaldee and Arabic this verb signifies to mend, to repair, to make whole, from extending spreading over or making strong. See the root {\textit{je}} infra.

We observe that {\textit{je}} and {\textit{je}} agree in original signification, with the English reach, on the root of which or some of its derivatives was formed stretch. That {\textit{je}} and {\textit{je}} were formed on any of the foregoing biliteral roots we may not be able to affirm; but it is certain from the Welsh that the first consonant of the triliteral root is a prefix; and it is certain from the Semitic languages that the primary sense is the same in the biliteral and trilateral roots, or its usual application in particular significations may readily be deduced from one general signification.

To illustrate this subject more fully, let us attend to the various applications of some other Semitic words of extensive use.

Heb. {\textit{je}} To create. This, by most lexicographers, is given as the first signification in all the Semitic languages. Parkhurst says, to create, to produce into being. Gen. i. 1.
2. To form, by accretion or concretion of matter. Gen. i. 21.
3. In Hiph. To make fat; to fatten or batten. 1 Sam. ii. 29.
4. To do or perform something wonderful. Num. xvi. 30.
5. In Niph. To be renewed. In Kal, to renew, in a spiritual sense. Ps. lii. 12.

Castle says,
1. To create from nothing, or to produce something new or excellent from another thing. Gen. i. Is. xlii. 5.
2. In Niph. To be renewed or re-created. Is. xviii. 7. Ps. ci. 19.
3. To cut off; to take away; to bear away, or remove; also to select; to procure. Josh. xviii. 13. 18. Ezek. xxii. 47.

Gesenius says,
1. Strictly, to hew, to hew out. [Ar. to cut, to cut out, to plane.]
2. To form; to make; to produce. Ar. {\textit{je}} The order of significations is, as in the Ar. {\textit{je}} galaka, to be smooth, to make smooth. 2.

To plane. 3. To form, make. Gen. i. 21. 27.
1. Niph. passive of Kal, No. 2. Gen. ii. 4.
2. To be born. Ezek. xxi. 30. Ps. ci. 18.

INTRODUCTION.

Pl. No. the verb differently pointed, to hew, to cut down. Josh. xvii.
15. 16.
2. To cut down with the sword; to kill. Ez. xxiii. 47.
3. To make fat. 1 Sam. ii. 29.

Thus far the Hebrew.

Chal. To create. Gen. i. 1.
2. To cut off. Is. xx. 9.
3. To make fat; to grow sound or strong. Talm. Deriv. Fat; whole; sound; strong.

Castle.

Syr. To create. Gen. i. 1. Mark xiii. 19.
2. To remove to a distance, and Deriv. distance, distant. Sam. A At To create. Gen. i. 22. Deut. iv. 32.

Castle.

Ar. To create. Job xxxviii. 7. [qu. 4 and 6.]
1. To be free, or guiltless, not obnoxious to punishment. Num. v. 25.
2. To be free, or guiltless, not obnoxious to punishment. Num. v. 31.
3. To be free, to absolve, from a crime; to liberate; to dismiss; to justify. Ex. xx. 7. Num. xiv. 18.
4. To escape; to forsake.
5. To recover from disease; to be healed; to restore to health. Lev. xii.
6. To cleanse; to free from impurities.
7. To abstain from.

Deriv. Creator; free; unobnoxious; clean; empty.

Castle.

Ar. To create.

1. To cut off; to hew or pare.
2. To separate; to distinguish.
3. To make thin.
4. To oppose; to strive; to resist.
5. To provoke; to boast, or make a parade.

Castle.

According to Gesenius, the primary sense of this verb is to hew, to cut out, and thus to make smooth, and thus to create; and he deduces these senses in the same order, as he does those of the Arabic verb, which gives the word the like meaning. But there is no ground for this opinion; and doubtless the word originated before the use of edge tools.

The predominant significations of this word, are, to separate, to free, to remove, as we see by the Arabic and Syriac.

Now hewing is indeed separating; and we have the English word pare from this root; but we must seek for a signification which is more general than that of paring, or we shall not be able to account for the sense of making fat, sound, entire, and strong, nor for that of being born.

The truth undoubtedly is, this word is of the same family with the English bear, the Latin pario, and the radical sense is to throw, to thrust, to send, to drive, to extend; hence to throw out, to produce, as applied to the birth of children or of the world. To throw or drive, is the primary sense of separation and division, that is, to drive off. The English word deal, when traced to its root, presents the same fact. See Deal. To create, is to produce or bring forth, the same sense as that of birth, applied to a different object. The sense of hewing and paring is from driving off, separation. In Syriac, we observe the general application, in removal, or departure to a distance. The sense of fattening is derivative, and alluded to that of healing or making whole, sound, strong, in the Arabic, that is, preparing, bringing to a good state, or from tension, the usual primary sense of strength and power.

To obtain a more full and satisfactory view of this subject, let us attend to the same word in the modern languages of Europe.

LATIN.

Para, to prepare, make ready, procure, design, &c. The radical sense of paro is probably the same as in the Semitic languages; to produce, to bring forth. No adverb readily implies an advancing, and so does promptness. But the various ways of preparing a thing for use naturally give to the word, in process of time, a variety of particular significations; each of which results in bringing the thing to the state desired. The compounds of pardo, are opposed to prepare, to furnish, encounter or set out; compare, to prepare or procure, to make equal, to compare, to join, to dress or make ready; preparo, to prepare; reparo, to repair, to create new, to regain, to compensate; separo, to separate. Let the Latin uses of this word be compared with the same Hebrew word in Joshua xvii. 15, where it is rendered cut down. "Ascend to the woodcountry and cut down for thyself;" Septuagint, megva {\textit{je}} praveron, clear for thyself. This is one mode of preparation for use. In Ezek. xxii. 19, it is rendered choose. Septuagint, {\textit{je}} apantos, appoint.

ITALIAN.

Parere, to prepare; to garnish; to adorn; to propose an occasion; to parry, or ward off, as a blow; to defend; to cover from or shelter; to repair.

The Italian, disparare, and the Spanish and Portuguese, disparar, to
discharge fire-arms, present the original sense of the root, to send or drive. This
sense gives that of the Welsh par, a spear, as well as a cause, or that which
impels. A spear is a shoot, from the sense of thrusting ; and our word spear
is probably formed from the root of bar and Welsh her, a spit, a pike, a lance,
as a spear, Lat. ver. Now in Chaldee, a bar is bar from bar, to pass, a verb
which is probably of the same family with bar. It is further to be obser-
vied that Italian, bar is written both barra and barcha.

is probably formed from the root of bar and Welsh her, a spit, a pike, a lance,
as a spear, Lat. ver. Now in Chaldee, a bar is bar from bar, to pass, a verb
which is probably of the same family with bar. It is further to be obser-

It appears then that the English 
and the Saxon from which we have
received it, and the Gothic and the Danish corresponding words unite, in the
same orthography, the senses of two words of different orthography in other
languages. I have found other examples of a similar kind. There is therefore
solid ground to believe that all these words are from one primitive root;
and the derivatives of the word, and the several appropriations having
originated in different families of the great races of men, before languages
were reduced to writing; and when they came to be written, each word was
written according to its usual pronunciation, and defined according to
its use in each family. And by the intermixture of tribes, two or three
derivatives of the same stock might have become a part of the same
national language. Unquestionably the Greek 
and are branches of
the same stock.

We have, in the modern languages, decisive evidence that different verbs
may have, and in fact have a common radical. Thus in English list and last,
different modes of writing the word; both are united in the other
Teutonic dialects. So in Latin libet and lubet; and similar instances I have
found in almost every language which I have examined.

The Latin pare, to appear, to come to light, if not a compound word, may
be of this family. Pare, a wall, if primarily a partition wall, is of the same
stock. Per, belongs to this family, as its signification is passing. The Sax.
fare, to fare, gr. 
, seems to be from one branch of this stock, probably 
. See the word pass in the Dictionary, in the derivative senses of which there are some resemblances to those of 
.

This verb, says Lowth, means to cover, to cover sin, and so to expiate; it is never used in the sense of breaking or dissolving a covenant; but that notion occurs so often in the Scriptures, nor can it be forced into this sense; and the most learned French etymologist, whose works I have seen,
agrees with the English Lexicographers, in assigning to this verb the
primary sense of covering or overlaying, as in Gen. vi. 14. He admits the
primary; and deduces from it the Greek 
, and English cover and coffer.

We have, in the modern languages, decisive evidence that different verbs
cannot be of the same family. For instance, in the Saxon word 
, to deny, to disbelieve; to be an infidel; to be impious; to be a heathen; to deny, or to press after. With respect to the verb 
, to desire, the English and Hebrew are from the same root as the Arabic 
, to desire, which is more clearly exhibited by the Dutch 
, the German 
, the French 
, and the Italian 
. 

The real original sense of this Shemitic verb is to remove, to separate, by
violence. It is properly applied.

The real sense of the Chaldee, Syriac and Arabic, to denial, the rejection of
God or truth. To deny or reject, to thrust away. Hence from the Arabic, 
cower, an infidel, one who rejects and rejects the Mohammedan religion; hence 
, the southern part of Africa, the country of infidels; so called by the followers of Moham-
medan, just as the Christians gave the name of 
, to the inhabitants of villages, 
, who rejected the Christian religion.

This significations explains the Hebrew uses of this word. Its literal sense
is applied to the cleansing or purification of sacred things, as the altar. Lev.
xxvi. 18. In a spiritual sense, to the purification of the soul, a type of the
purification by the blood of Christ; hence it is rendered atonement, or expi-
ation. Hence probably the sense of appeasing; Gen. xxxii. 21. Prov. 

Now it is a question of some moment whether the opinion that 
is the same as the English cover, has not inclined lexicographers and commen-
tators to render it by this word, in several passages, where the true sense is to forgive, or to purify by cleansing from sin.

However this may be, the interpretation given above will fully disprove
Lowth's assertion, that this word is never used in the sense of breaking or
dissolving a covenant. So confident is the learned Bishop on this point that
he ventures to call in question the reading, Isaiah xxviii. 18; and to
suppose the true word to be 
, to break. With respect to the
reading I shall offer no opinion; but if the present reading be correct, I am
confident that no word in the Hebrew language is better fitted to express
the sense. Your covenant with death shall be wiped away, abolished, or
as in the version, dissolved.

If 
be a compound word and the first letter a prefix, it may be from the
same root as the Arabic 
, to cover, whose significations is to cover.

But the primary sense is to thrust or put away. It signifies also to forgive,
but to forgive is to send back or away, remitto, and not to cover. And I
apprehend that for want of knowing the primary sense of such verbs, the
word cover has been often substituted for forgive, in the translating of this
verb.

No. 7. Heb. כְּכָה To be able; to prevail; Lat. calceo; W. galleo; Eng. could.

No. 8. Ch. כְּכָה To digest; to consume. (No. 5.)

Ar. שֶׁכָּה To collect; to tie; to bind; to unite; also, to divide, impel, or compel. This is the primary sense of the word, or rather of this root; to press; to strain; to urge, or impel; also, to extend. These verbs are different modifications of one radix; and hence the English hold, call, hallow, bent, hate; the Latin calceo, calceo, calceo, calceo; Greeks, σαλατο, σαλατο, σαλατο; and a multitude of words in all the modern languages of Europe.

The sense of holding, restraining, forbidding, hindering, and keeping, are too obvious to need any explanation. They are from straining. To this sense is nearly allied, in the sense of measuring, or ascertaining the effects produced on the original word by a pressing, driving, or straining, applied to sound; like the Latin calo, calis, calleo, calus; Greek, ὀξεῖον, from crowing.

The sense of calling, answering, or replying; a pressing, or compelling, applied to sound; like the Latin calo, calis, calleo, calus; from crowing.

The sense of knowing, understanding, is usually or always from taking, holding, or extending; as we say, I take your meaning. In this application these words would seem to be directly from the Eth. and Ch. שָׁכָה to be able; the Latin calceo, to be hard, and to know or be well skilled.

That this word שָׁכָה is from the same root as סְכָה, סָכָה, we know by the Samaritan שָׁכָה, which signifies all, and which is a mere dialectal spelling of the Heb. and Ch. שָׁכָה.

The sense of depriving, wasting, and working in the Hebrew, is from separation, the sense of the Gothic and Teutonic words; but it is to be noticed that this sense seems to imply throwing, as one mode of parting, and this is also the direct act of founding, laying the foundation.

When we turn our attention to the Arabic, new affinities are disclosed. The first definition is to bind, to gird, to shackle, and hence the English shackle. The secondary sense of this root is to tie, which is from straining or stretching. Or it may be from coming to the end, like finish and achieve, or from shutting, closing. And the sense of consuming, wasting, wasting, may be from bringing to an end. In Latin, to consume is to take all; and possibly this may be the primary sense of this verb. But the Arabic sense of failure would seem rather to be from holding, stopping, or coming to an end.

The sense of eating can be by consuming, or taking apart, but from some of the derivatives of No. 5, I am inclined to think the primary sense is to feed, to crowd, to stuff; the primary sense of the root applied to this particular act; for under the Chaldee root we find words which signify the root of a species of oak, the Gr. σαλασσόν, and a collection or crowd of people, [Gr. σαλσα], both of which are from collecting or pressing together.

The sense of containing, and looking is from reaching or casting and striking, or from holding or fixing the eyes.

The sense of trusting also seems to be that of holding to or resting on.

The English hold in behold is from this root.

The sense of calling, crowning, and thunder. On this root שָׁכָה is probably formed שָׁכָה, a word differently pointed in the Hebrew and Chaldee. This word signifies in Hebrew to pervert, to err, to understand, or to act wisely; and this is only a modification of the primary sense of שָׁכָה, to stretch or extend; that is, departure, separation. And the שָׁכָה has, in this sense, the force of a negative.

I am persuaded a vast number of instances of similar diversities in the application of prefixes may be found in the Semitic languages: and this will account for differences which otherwise seem utterly irreconcilable.

We find in our mother tongue, that the same word signifies to heal, and to conceal, Lat. celo; Saxon heal, health; helan, helan, to heal, to conceal; ge-helanon and ge-helan, to heal and to conceal; Old English helc. Hence we see that the English heal and the Latin celo are the same word, though applied to the radical meaning of healing, which is to make the body whole, strong or fast, or to hold, from the sense of pressing. Or perhaps the Latin celo may have this sense of holding, restraining; and heal may rather be from making perfect. No. 2. Supra.

But this is not all. In Greek, the verb ἣλθεν, ἥλθεν, ἥλθον, signifies to shut, or make fast. This is the Latin claudo, claudere, obserare, to shut, or shut up, or end; sūx, a castle; close, stop, conclude; G. schloss, a lock; schliessen, to close, conclude, finish, shut. The Teutonic dialects use the dental t, as the final radical, except the German which is the English shut, and the Dutch schut, shut. The Danish used k for the Greek x and the Latin c; and the German, which is the same as the English shut, and of the same root, is used the same way, to shut. Hence we see that the English heal and the Latin celo are the same word, which is the same as the Italian gridere; Sp. and Port. gritar; Saxon gridan; Sw. gräta; Dan. græder.

The Shemitic roots נַעְלָה, עֶשֶׂר, נַעְרָה, and מַעַמַע, all in some of the languages of that stock, coincide in sense and elements with the English grate, French gratter; and if the first letter is a prefix, they would seem to unite with the Latin rado. But this is a point I would not undertake to determine.

One fact more. The Welsh eri, above mentioned, signifies a cry; and as an adjective, rough, raw. Now this coincides with the English cruder, in sense; and cradus with the Welsh cyled, above mentioned.

The Dan. brygger, English to break, are probably connected with break, with bleak, and with rough. So under this root, the Welsh greadu, signifies to heat, scorch, parch, whence greedy, a griddle, from graid, that shoots in rays, heat, acidity, from gra, that shoots, or rises, as the nap or frieze of cloth. The latter is probably a contracted word, of the same family, but not the root; and it is so the root. But the radical sense implies a shaking, agitation and roughness.

Mect, mete, measure.

Saxon.—Metan, to put, to place; Fr. mettre, It. mettere, Sp. Port. mete, Lat. mitto.

Metan, metan, to find, to meet, or meet with; to paint; to dream; to meet, Lat. meetere, G. mess, messen, Lat. metanos, with a n, that, means, Fr. mesure.

Amelan, gometan, to meet, to find, to measure.

Gemeting, gemeting, a meeting.

Gemel, gemete, lit, useful, Eng. meet; also, painted or portrayed gemetogen, gemetian, to moderate; gemetie, moderate, modest.

Dutch.—Ontmoeten, to meet, to encounter.

Meeten, and toomeeten, to measure.

Meeter, a measure.

Gemoeten, to meet; gemot, a meeting.

German.—Mass, measure, meter; masse, moderation.

Messers, messers, to measure; messer, a measure.

Gemessn, mesure; also, of a person, suitable; Eng. meet, suitable; German gemussigt, temperate, moderate.

Swedish.—Mota, to meet, to fall on, to come to, to happen. [This is the sense of finding.] Music, a meeting.

Met, and emot, towards, against; as in motsfS, to stand against, to resist.

Mota, to measure; mitt, measure, meter, mode.

Mittellig, moderate, middling, frugal, temperate.

Gemel, to be sufficient, to satisfy, to clove.

Danish.—Moler, to meet, to converse; moderate, a meeting; med, contrary, opposite, against, to, towards, for, on, by, aside, abreast, as in modmeter, to set against, to oppose; modsiger, to say, against; contradi, to be contrary, contrary, against.

Mode, moder, ripe, mellow, mature. [Qu. Lat. mittu.]

Mod, manner, fashion. [Probably from the Latin.]

Mute, measure, form, style of writing, way, mode, manner, fashion. [This is the native Danish word corresponding to the Lat. modus.]

Mandelig, moderate, temperate.

Mete, enough, sufficient; metter, to satisfy, or safe, to glut.

From the same root are the G. mit, D. met, mete, Sw. and Dan. med, Gr. μετε, metere, to rub or scrape.

By the first signification of the Saxon meten, or meton, we find that this word, which is the English meet, is also the French mettre and Lat. mittu, the sense of which is to throw or send, to put, to lay. Meet is only a modified form of mittu, in the same sense, to come to, to tall, to reach, hence to find; as we say, fall on.

The sense of painting or portraying is peculiar to the Saxon. I am not confident that this sense is from finding; but we observe that metere is ren-
INTRODUCTION.

This application coincides with the English meet, but particularly with the Swedish and Danish senses of the word. 4. To make thin, to attenuate; probably from stretching. Among the Arabic nouns formed under this root, we find a measure, or modulus, showing that this verb is the same as the Chaldee and Hebrew; we find the notion of matter, of pus, and the other. In Chaldee, מוד, or מוד, signifies to come to, to happen, to reach, [to meet,] to be ripe or mature, to cause to come, to bring or produce. The first sense gives that of finding, and the latter gives that of maturing, and we observe that matter, or pus, is from the Arabic מ"ד madda, and the sense of mature from the Chaldee מוד, mita. Yet in the use of mature we connect the words, for to mature, is to ripen, and to generate matter.

In Syriac, this verb signifies the same as the Chaldee, to find, [to come to,] to happen. In Chaldee, this verb signifies, to be strong, to prevail; hence both in Hebrew and Chaldee, to be sufficient. Here we see the Danish and Swedish, matter, and mitte, to be sufficient. This is also meet, dialectically varied.

In Syriac also this verb signifies to be strong or powerful; also in Pahl. to bring or press out, to delate, which sense unites this word with the Hebrew מוד, to use force, to bruise. In Ethiopic, this verb signifies to come, to happen, to cause to come, to produce. Now it is evident that מודע, and the Chaldee מוד, are dialectical forms of the same word; the former coinciding with the German mas, in orthography, but with the other languages, in signification.

In Chaldee, מוד, signifies the middle, and as a verb, to set in the middle, to pass the middle, in Syriac, to be divided in the middle. Qu. Is not this a branch of the family of meet?

The Chaldee מודע, amad, to measure, is evidently from מודע, with a prefix or formative ק. This word, in Syriac, signifies like the simple verb, to escape, to be liberated. In Pahl., to liberate.

In Arabic, this verb מוד signifies to terminate, to end, whence the noun, an end, limit, termination, Latin meta, which, Ainsworth informs us, signifies, in a metaphorical sense, a limit. The fact is the reverse; this is its primary and literal sense, and that of a pillar and goal are particular appropriations of that sense.

In Hebrew, מוד signifies a cubit, a measure of length. The same in the Rabinic, from מוד, with a prefix.

In Chaldee, this verb signifies to be contracted, to shrink. Is not this sense from מוד, measure, modulus, a limit, or a drawing?

That the Semitic words, מוד, מודע, מודע, and מודע, are words of the same stock with meet, mete, Lat. metier, there can be no doubt, but it is not easy to understand why the different significations of meeting and measuring should be united in one word, in the Saxon language, where they are different words in the Semitic, and in most of the Teutonic languages.

We know indeed that in German a sibilant letter is often used, in words which are written with a dental in all the other kindred languages. But in this case the German mans, measure, Lat. mensura, and the Saxon meton, Dutch meten, Goth. metyan, Sw. metu, Dan. møde, and the Chaldee מודע, but not with the word מודע.

It may not be impossible nor improbable that all these words are from one stock or radix, and that the different orthographies and applications are dialectical changes of that root, introduced among different families or races of men, before languages were reduced to writing.

In the Latin mensus, from metier, the n is probably casual, the original being mensus, as in the French measure. I have reason to think there are many signs of this inscription in the following words. Lat. mitto, French mettre, English meet, to come to, meet, fit, and mete, to measure, Lat. metier, motor, mette, what proceeds or goes forward, hence what is good; and mod, the adjective, signifies, proceeding, advancing, progressive, good or beneficial.

This word then affords a clear proof of the radical sense of good. We have like evidence in the English better, best, and in prosperity, which is from the Greek ευπροσπόρετος, to advance.

In Welsh also we find maddres, matter, pus; madru, to dissolve, to putrefy, to become pus. That these words are from the same root as the Arabic

This sense of mete, to come to, points back to the common origin of the following words. Lat. mitto, French mettre, English meet, to come to, meet, fit, and mete, to measure, Lat. metier, motor, mette, what proceeds or goes forward, hence what is good; and mod, the adjective, signifies, proceeding, advancing, progressive, good or beneficial.

This word then affords a clear proof of the radical sense of good. We have like evidence in the English better, best, and in prosperity, which is from the Greek ευπροσπόρετος, to advance.
and if formed on the root of lay. is precisely the popular phrase, to lay on. desert, Amsworth says, is a compound of de and sero, 'ut sit desertum constituam, and in this, as in almost all cases, gives the sense of speaking. The sense of collecting, choosing, gathering, is from throwing, or drawing out, or separating by some such act; or from throwing together. The sense of lying down is probably from throwing oneself down. The sense of throwing is that of laying or depositing, which is the same as that of speaking in the Greek, unless it may be from collecting, that is, separating the letters, and uniting them in syllables and words; for in the primitive mode of writing, disarticulated points were not used. But the Greek, the Latin, and other languages, are evidently derived from the same root.

The phrases legere oram, legere littus, in Latin, may coincide with that of our seamen, to stretch or lay along the shore or coast, or to hug the land; especially if this word lay in Sanscrit signify to cling, as I have seen it stated in some author, but the which I cannot vouch. If this sense is attached to the word, it proves it closely allied to the L. ligio, to bind.

That the sense of throwing, or driving, is contained in this word, is certain from its derivatives. Thus, in Greek, αρέσσω signifies to select, to collect; and απορρέω, to reject, to repudiate, and to forbid; which imply throwing or thrusting away.

Now, if, in throwing, or sending, or driving, is the primary sense, then the Latin, in lego, to read, and lege, legare, to send, are radically the same word; the inflections of the verb being varied, arbitrarily, to designate the distinct applications, just as in pello, appel1o, appellare, to drive, and appelare, to call. And here it may be worth a moment's consideration, whether several words with prefixes, such as slay, hog; and the Latin plico, W. plyn, are not formed on the root of lay, that is, lato, ex lato, which, as sligan, slawn, is properly to strike, to beat; hence in Saxon, "Hog slagon heora wedd," they slew their league, or contract; that is, they struck a baton; and in this the same is also to throw, as to sing into prison; also to set; or lay; the sense of killing is derivative from that of striking a striking down.

Flog, Lat. flugo, signifies primarily to rush, drive, strike, Eng. to tickle; and, on the root of lay, is precisely the popular phrase, to lay on. If plico is formed from a prefix of meaning the same as in speaking, or speaking, it must have originally been pelico, that is, belico, behalf. Then to fold, would be to lay on or close; to lay one part to another. Now this word is the Welsh pylgu, to fold, which Gwen makes to be a compound of py and ly. The latter word must be a contraction of phlug.

We know that the word reply is from the French repliquer, the Latin replico. Now, reply, is not to fold back, but to send back, to throw back, as words, or an answer; and this gives the precise sense of lay, to throw, to send, which must be the sense of the radical word. It is no considerable evidence of the truth of my conjecture, that we constantly use the phrase to lay on, or lay to, as synonymous with ply; a word belonging to this family. To pledge, another of this family, is to Lay down; and the primary sense of play, Saxon plean, Dan. legere, Sw. leka, is to strike or drive.

In Welsh, luciae signifies to throw, fling, cast, or dart; to pelt; to drift; from lbue, a darting, a flash, glance, or sudden throw; hence luced, lighting raving. Ling signifies also, that breaks, or begins to open, a gleam, a breaking out in blatches; the plague. Ling also signifies, that is apt to break out, that is bright, a tumor, eruption. These words coincide with English light, Lat. lumen; the primary sense of which is to throw, shoot, or dart; and these words all contain the root elements of flug set of reading, in Latin.

In Welsh, flugen signifies to fall flat, to be extended, or to squat. This is evidently allied to lay and lie.

These sense agree also with that of buck, to fall, or come suddenly; that is, to throw, or be done.

In Russ. vlagnay is to lay, or put; equivalent to the German einlegen.

The Latin fluo is contracted from flugio; and the radical sense of Bflu is the same as that of that of light. So the river, cluar, in Europe, is doubtless from the same source as the Oriental θυρος, to thrust or force. And θυρος, which, in Hebrew, signifies to flow as water, as well as to shine, clearly signifies in Chaldee and Syriac, to shine.

To show the great importance, or rather the absolute necessity, of ascertaining the primary sense of any word, when we attempt to gain clear ideas of the sense of ancient authors, more particularly of different passages in dead languages, let the reader attend to the following remarks.

In commenting on certain parts of Isaiah xxxvii, Lowth observes in his Hebrew and Syriac Dissertation on the difficulty of determining the meaning of 3ir, in verse 15th. In our versions, as in others, it is rendered agreement; but, says Lowth, "the word means no such thing in any part of the Bible, except in the 18th verse following; nor can the lexicographers give any satisfactory meaning to it, except in that of the sense in this verse." Yet he agrees with Vitringa, that in these passages it must be understood more particularly in a signification; the difficulty, it seems, has arisen from not understanding the primary sense of seeing, for the verb generally signifies to see; and as a noun the word signifies sight, vision; and so it is rendered in the Latin version annexed to Vanderhooght's Bible. The seventy render it by estem, a covenant or league; and they are followed by the moderns. "Nous avons intelligence avec le sepulcre." French. "Noi habibam tutt' lega col sepulcro." Italian of Diodati.

Parkhurst understands the word to signify, to fasten, to settle, and he cites a Sam. xx. 9, "Isah took Amassa by the beard. Here the sense is obvious; and from this and other passages, we may infer with certainty, that the radical sense is to reach to, or to seize, hold, or fix. If the sense is to reach to, then it accords with covenant, conventions, coming to; to the assistance of; to fix, or fasten, to endow, to baptize, with pactum, pactum, from pango, to make fast; all from the sense of extension, stretching, straining. Hence the meaning of annexed, the breast, that is, the firm, strong part. And if the English gaze is the same word, which is not improbable, then the Latin, which carries the meaning of seeing in this word, to be fix, or to look or reach with the eye fixed.

But we have other and decisive evidence of the primary signification of this word in the obvious, undisputed meaning of 3ur, the same word with a prefix, which signifies to catch, or lay hold on; to seize, hence, behind, following, as if attached to, and hence drawn away in time, to delay.

Now it is not improbable that the Arabic j&d huz, haz, may be a word of the same stock; and this signifies among other senses, to collect, collect or draw together, to accumulate, to have intercourse or commerce with. The latter sense would give nearly the signification of the Hebrew word.

Lexicographers are often embarrassed to account for the different signification of words that are evidently derived from the same root. Thus, in Hebrew, 3ur is rendered to sing; to look, behold, or observe; and to rule; and its derivatives, a ruler, a wall, the novel-string, a chain or necklace, &c. How can a word signify to rule, and to sing, and to look? Nothing can be more easy or natural. The sense is in both cases to stretch, or to reach. To sing is to strain the voice; to rule is to restrain men; and to see is to look, or hold to hold in view.

In Latin, soro, signifies to sow, to plant, to begot, to spread; consero, to sow, and to close or join; desero, to leave off, to desert; assero, to plant by, and near, and to asser, affirm, and pronounce; dissero, to discourse; insero, to insert, to implant; resero, to unlock, to open, to disclose. Desero, the mode of being a desert, or wilderness, is from assero, sero, quod non situr nec collurit. And dissero he supposes must be a metaphorical use of the word. Now, on the principles I have unfolded, nothing is easier than an explanation of these words. The sense of soro is to throw, to thrust; its literal sense is applied to sowing and planting; consero is to thrust or drive together; desero is to throw from; asero is to throw, in words, or to throw out, as in appello; disero is to throw words or arguments, with the sense of spreading, expatiating; insero is to throw or thrust in; resero is to thrust or drive from, hence to unlock or open.

It is by resorting to the primary idea of words that we are able to explain applications, apparently, or in fact, diverse and even contrary. A very common example of this contrariety occurs in words which signify to guard or defend. For instance, the Latin ares signifies to drive off, and to protect, secure, hold, restrain, or keep from danger or expense; and asser is directly opposite. This is extremely natural; for asero signifies to thrust off, repel, drive back, and this act defends the person or object attacked. Or if we suppose the sense of straining to be anterior to that of repulsion, which is likewise from pango, to make fast, then it must have been from anambit, quod non situr nec collurit. And dissero he supposes must be a metaphorical use of the word. Now, on the principles I have unfolded, nothing is easier than an explanation of these words. The sense of soro is to throw, to thrust; its literal sense is applied to sowing and planting; consero is to thrust or drive together; desero is to throw from; asero is to throw, in words, or to throw out, as in appello; disero is to throw words or arguments, with the sense of spreading, expatiating; insero is to throw or thrust in; resero is to thrust or drive from, hence to unlock or open.

These examples illustrate the utility of extensive researches in language; as all cognate languages throw light on each other; one language often retaining the radical meaning of a word which the others have lost. Who, to the same sense, that is appropriated only with the English use of the verb to have, would suspect that this word and happen are radically one, and that the primary sense is to fall or rush, hence to fall on and seize? Yet nothing
is more certain. In the Spanish language the senses of both verbs are retained in haber; and the Welsh hapaw gives us the true original signification.

In like manner the primary sense of venio in Latin, cannot be certainly determined without resorting to other words and to kindred languages. In the Latin, the word signifies not only a coming or arrival, but an attack.

Venio coincides in origin with the English find; Saxon findan; German and Dutch vinden, to find, to fall or light on; Danish finde, to find, to discover, to meet, to strike against (offendere.) The primary sense of both verbs is to move with a driving force; and this sense is applicable to coming or going.

That the primary sense is to fall or rush, we have evidence in the Latin venire, and the English venus, both from the root of this verb. We have still further evidence in the Latin venire, which in Welsh is rhytrau; in Danish, and in its application, to rush on and seize.

So the Latin lapo, to seize, is in general, to move in any direction, and that the Latin sense, to come, is a particular appropriation of that sense.

That the primary sense is to fall or rush, we have evidence in the Latin venus, and English wind, both from the root of this verb. We have still further evidence in the Latin venire, which in Welsh is rhytrau; in Danish, and in its application, to rush on and seize.

INTRODUCTION.

In ascertaining the primary sense of words, it is often useful or necessary to recur to the derivatives. As it has been supposed that each word, particularly each verb, has an acquired or derived sense, the origin or primary sense of a word may be recovered by comparing the same word in different languages, that the fact is directly the reverse; that a word may have different senses, not only a coming or arrival, but an attack.

We find, however, on a close examination and comparison of the same word in different languages, that the fact is directly the reverse; that a word may have different senses, not only a coming or arrival, but an attack.

It appears that the Latin word, venio, signifies not only a coming or arrival, but an attack. Venio coincides in origin with the English find; Saxon findan; German and Dutch vinden, to find, to fall or light on; Danish finde, to find, to discover, to meet, to strike against (offendere.)

INTRODUCTION.

To begin is to come, or fall on; to thrust on. We have a familiar example in the Latin incipio, in and capio; for capio is primarily to fall or rush on an object. The Latin puto. The simple verb puto is rendered to prune, lop or dress, as vines; pooten, to plant; pool, a paw, a twig or shoot, Gr. (furov, sic. on and seize. See Begin in the Dictionary.

In attempting to discover the primary sense of words, we are to carry our reflections back to the primitive state of mankind, and consider how rude men would effect their purposes, before the invention or use of the instruments which the modern employ. The English verb to cut, signifies ordinarily to separate with an edged tool; and we are apt to consider this as the chief and original sense. But if we consider how we can cut, the stroke or cut up accounts, also to think or consider; to suppute; to deduce. Its compounds are amputo, to cut off, amputate, to remove; computo, to compute, to reckon, to think or deem; disputo, to make clear, to adjust or settle, to dispute or debate, to reason. As in the popular practice to place to account; reputedo, to consider, to resolve, to reckon up, to impe. The Latin deputo signifies to think, judge or esteem, to account or reckon, and to prune; but the Italian deputare, Spanish diputar, and French depuiter, from the Latin word, all signify, to send. How can the sense of think be deduced from the act of severing or cutting in the phrase to cut off? To prune is to separate, remove, or drive off; to force off; to cut about. We find the solution of this question in the verb to depute. The primary sense is to throw, thrust, or send, or lay down, or drive apart, like de. INTRODUCTION.

A crowd, a mass, a people, are from collecting or pressing, or some allied significance.

Steam, smoke, are usually from verbs which signify to exhale or throw off.

Stepping seems to be from opening, expanding, stretching. Thus passus in Latin is from paso, to open, but this agrees in origin with pato, and with the Greek φασσω. Gradus in Latin coincides with the Welsh rhawed, a way, and this, when traced to its root, terminates in the oriental ين, ين, Chaldean, to open, stretch or expand: in Syriac (ي) radah, to go, to pass. Walking may be sometimes from a like source, but the Welsh walk signifies primarily to roll, press, work and fall, as a hat, whence walker signifies a fuller.

Softness and weakness are usually named from yielding, bending, withdrawing, as is relaxing. Softness however is sometimes connected with smoothness, and nearly allied to roughness.

Sweetness seems to have for its primary sense, either softness or smoothness.

Roughness is from sharp points, wrinkling or breaking; and acidity is from sharpness or pungency, and nearly allied to roughness.

Death is expressed by falling or departure; life by fixity or continuance, or from animation, existence.

Selling is primarily, a passing or transfer. Sellan, in Saxon, signifies to give as well as to sell.

A coast or border, is usually the extreme point, from extending.

Law is from setting, establishing.

The primary sense of son, daughter, offspring, is usually a shoot, or as we say, issue. Hence in Hebrew עב, signifies both a son, a cion, a branch, and the young shoot of a plant, together with the young shoot of the human body, to build, and hence he infers that a son is so called, because he builds up or continues his father's house or family. But if so, how does the word apply to a branch, or an arrow? What do these build up? The mistake of this sense is, as we have seen, from the author, and he confuses the general meaning of the verb, which is not to erect, or elevate, but to throw, to set, to found; and this verb is probably retained in our word found. A son is that which is thrown or shot out, a cion or branch is the same, an offset, one in offset of the human body, the other of a plant, and an arrow is that which is shot or thrown. Hence probably the Hebrew אָבִין even or even, a stone.

W. maen, or maen, which is set, so named from its compactness or hardness.

And in Arabic اب, ab, signifies to think, Lat. opinor, that is, to set in the mind.

Few and small are senses often expressed by the same word. Thus, although few in English expresses merely a small number, yet the same word in French, peu, and in the Italian, poco, signifies little in quantity, as well as few in number.

Cause is from the sense of urging, pressing, impelling. Hence it well expresses what which produces an effect; and hence it is particularly expressive of that by which a man seeks to obtain a claim in law. A cause in court is properly a pressing for right, like action from ago; and prosecution from the Latin sequi, to follow, that the primary meaning of the word, which is not to erect, or elevate, but to throw, to set, to found; and the word is finally retained in our word founded.

But from such facts as have occurred to me, in my researches, I may venture to affirm with confidence, that most names of natural objects are taken from some obvious quality or action, or some supposed quality of the thing; or from the particular action or operation by which it is produced. Thus furnaces are named from pushing, or melting; and redness, or redness, from spreading, or expending, extending. Skin and bark are from peeling, stripping, &c.

The names of particular animals and plants cannot always be traced to their source; but as far as I have been able to discover their origin, I find that plants, and some birds, are usually named from some obvious quality or action, or some supposed quality of the thing; or from the particular action or operation by which it is produced. Thus furnaces are named from pushing, or melting; and redness, or redness, from spreading, or expending, extending. Skin and bark are from peeling, stripping, &c.

Thus plants were named from their qualities: some from their form, others from their color, others from their effects, others from the place of their occurrence. Hence we have many names in the Latin language for plants, which, of course, are derived directly from the original languages of the scriptures. In order to determine the significance of the Hebrew and Arabic names of plants, I was obliged to consult the Arabic language, and especially the Arabic grammar, in order to ascertain the primary or radical letters, and of course the family to which they belong. Numerous examples of such words occur in English, as in every other language.

The names of particular animals and plants cannot always be traced to their source; but as far as I have been able to discover their origin, I find that plants, and some birds, are usually named from some obvious quality or action, or some supposed quality of the thing; or from the particular action or operation by which it is produced. Thus furnaces are named from pushing, or melting; and redness, or redness, from spreading, or expending, extending. Skin and bark are from peeling, stripping, &c.

Thus plants were named from their qualities: some from their form, others from their color, others from their effects, others from the place of their occurrence. Hence we have many names in the Latin language for plants, which, of course, are derived directly from the original languages of the scriptures. In order to determine the significance of the Hebrew and Arabic names of plants, I was obliged to consult the Arabic language, and especially the Arabic grammar, in order to ascertain the primary or radical letters, and of course the family to which they belong. Numerous examples of such words occur in English, as in every other language.

Progress and Changes of the English Language.

It has been already observed that the mother tongue of the English is the Anglo-Saxon. The following are specimens of that language as it was spoken or written in England before the Norman conquest. The first is from the Saxon Chronicle. The original is in one column, and the literal translation in the other. The English words in italics are Saxon words.

The boat was wrought of two hides and a half [third half hide, i.e. in which they fared [came] and they took with them that they had for seven nights meat, and they came withdrew [bestole] because that they would, for God's love be [or live] where they should not be anxious—reck, care.

INTRODUCTION.

Laws of King Edggar.

We lаратh thaс cрelen man, his learn to christianize gonlimeli
wandise and him pater noster and creon tace.

We direct that a priest be not a hunter, nor however, nor a gamester;
but that he apply to his books, as it becomes his order.

We observe by these extracts that rather more than half the Saxon words
have been lost, and now form no part of our language.

This language, with some words introduced by the Danes, continued
to be used by the English, till the Norman conquest. After that event, great
numbers of Saxon words went into disuse, not suddenly, but gradually, and
French and Latin words were continually added to the language, till it be-
gan to assume its present form, in the fourteenth and fifteenth centuries.
Yet the writings of Gower and Chaucer cannot now be fully understood
without a glossary.

But it was not the loss of native Saxon words and the accession of French
and Latin words alone that the change of our language consisted. Most
important alterations were made in the sounds of the vowels. It is probable,
if not certain, that our first vowel a had usually or always the broad sound,
as we now pronounce it, or in some cases perhaps the Italian sound, as it is now
called, and as we pronounce it in ask. The sound of e was probably
nearly the same as it is in French and Italian, and in the northern
languages on the continent of Europe, which is nearly that of a in favor.
The Saxon sound of i was probably the same as it is still on the continent;
the sound of o or long e. The sound of u was that of our present oo,
French ou, the sound it still has in Italian, and in most countries on the Eu-
rogen continent. It is probable that the change of the sound of u happened in con-
squence of the prevalence of the French pronunciation after the conquest.

These changes, and the various sounds given to the same character, now
serve to perplex foreigners, when learning English; and tend, in no small
degree, to retard or limit the extension of our language. This is an unfor-
natural circumstance, not only in obstructing the progress of science, but of
christianity.

The principal changes in the articulations are the use of k for c, as in look
for lec; of h before i, as in hoof from hlof; lot for hot, lean for hlinnan;
and the entire loss of the prefix ge or ga, as in deal for get-datal,
deam for ge-deman; and of to as a prefix, as to-helpan to help; to-datal-
dan, to deal. In no instance do we feel more sensibly the change of sounds
in the vowels, than in that of i, which in French, Spanish, and Italian
is long; for in consequence of this, persons, who are not acquainted with these
foreign languages, mispronounce such words as marclo, Messina, Lima,
giving to its English sound, when in fact the words are to be pronounced
maceo, Messinae, Limae.

In grammatical structure, the language has suffered considerable altera-
tions. In our mother tongue, nouns were varied to form cases, somewhat
as in Latin. This declension of nouns has entirely ceased, except in the
possessive or genitive case, in which an apostrophe before s has been sub-
stituted for the regular Saxon termination es. Some of our pronouns retain
their declensions, somewhat varied. The plural termination in es has been
brought, in a number of words, and the regular plural termination been sub-
stituted, as houses for houses.

In most cases, the Saxon termination of the infinitive mode of verbs, has
been dropped, and for gyfan, we now write, to give. The variations of the verb,
in the several persons, have been materially changed. Thus for the Saxon—

le iuuge, leuifat, leuifath.
Thu uuafst, thu uufath.
He uufath.
I love, geuafth, geuafeth.
I love, geuafth, geuafeth.
I love, geuafth, geuafeth.
Theu I love, Theu I love, They love, They love.
They love.

In the Saxon plural however we see the origin of the vulgar practice, still
retained in some parts of England and of this country. We loves, they
loves, which are contractions of loath.
INTRODUCTION.

In a pamphlet now before me, there are no less than fifty of these incoherent attempts. If this representation of M. Neckar was false. Pitt.

If the prudence of reserve and decorum dictates silence. If an assembly is viciously or feebly composed. If any persons are to make good their vicious or nugatory efforts. Whether the system, if it deserves the name. The prince that acquires new territory, if he finds it vacant. If any person hath never examined this notion. "If a pen with the same marked distinction of tenses, which appears in the Greek and Latin, is not purely a single exception, unless in the use of the substantive verb, which is often used in the subjunctive form.

This fault runs through the whole English version of the scriptures, and a distinction of tenses clearly marked in the original languages, is generally neglected in the translation.

Now the most unlettered man in this country, would express the sense in English, with the same marked distinction of tenses, which appears in the Greek and Latin, and right give the first clause, does not correspond with that in the second clause.

So in German Ich bin. "If our conduct has been marked with vigor and wisdom." Fox.

The principle of the French has really deserved these consequences. In regard to this distinguished author, I would observe that, except the substantive verb, there is in his Rambler but a single instance of the subjunctive form of the verb in conditional sentences. In all other cases the use of the indicative is uniform.

Such also is the language of the most distinguished men in the United States, particularly of those who wrote their native language as they received it from the influence of Locke. If the soul doth think in sleep. "If one considers well these men's way of speaking. "If he finds his collection too small. "If he finds it as he has expected. "If it gives blind confidence to any executive government. "If such an opinion has gone forth.

"If his conduct has been marked with vigor and wisdom." Fox.

How, in this case, is a foreigner to understand the author, and how can such sentences be translated into another language without a deviation from the original? It will be our object to let us understand this condition of the language, and call all combinations are verbs, having not the least affinity to the class of words used to connect sentences. If in the Saxon gif, give, having lost its last letter; if for the ancient gift. The true original phrase was "If that the man knows his true interest, he will avoid a quarrel"—that is, that which is expressed in the following clauses: the man knows his interest, he will avoid a quarrel. That in this sentence is a relative, or demonstrative substitute for the following clause. This will more plenily appear by transposing the clause. The man knows his true interest; give that. INTRODUCTION.

ally called most improperly, the imperfect. Take the following sentences for examples. The conduct of Pelopidas towards Arcadia and its minister at the Persian court has scarcely been the result of mere caprice or resentment. If we still maintain that the time is past when the statesmen, he says, he acts, he wrote, is not properly named imperfect. This form of expressing the time would be good in French, but is very bad in English. Now, in the expression, whereas the words are quite correct, he acts, he wrote, is not properly named imperfect. But the error of calling the former tense imperfect has probably proceeded from a servile adoption of the Latin names of the tenses, without considering the difference of application.

The cases of this word in all the English Grammars, that have been derived to us from antiquity. Such is the arrangement of that among the conjunctions, like the Greek en, and the Latin et. Qua est odiumo tuum puero muno. It is merely a word of number, and no more an article than two, three, four, and every other number in the language. Take the following examples. Bring me an orange from the basket; that is, any one of the number. Bring me two oranges from the basket; that is, any two of the number. Bring me three oranges from the basket; that is, any three of the number; and so on to any number ad infinitum. When thus used, an, two, three, are all indefinite; that is, they are used without any reference to a particular person or thing, or expressing things not particularly designated. But this is not owing to the essential character of the adjectives, an, one, two, three; for any of them may be used with definite nouns; and an is continually thus used. The angel stood for an adversary against Israel. Make this fellow return, lest in the battle he be an adversary to us. Rezon was an adversary to Israel all the days of Solomon. And he spake a parable to them to this end. And there was a wind of the Lord. And seeing the multitude, he went up into a mountain. I will be a God to thee and thy seed after thee. Thou art a God ready to pardon. And he spake a parable to them; that is, any parable, indeterminate.

This mistake of the character of an is found in other languages; but I was gratified to find a French Grammar in Paris, recommended by the Institute, the author of which had discarded the indefinite article.

In English, an or a, is, for the most part, entirely useless. Used with a noun of a singular number, it serves no purpose, except that which the form of the word in the singular number, and its corresponding form of the word, in the singular number, is intended to answer. It expresses universality, and this is the province of the singular number. Were it not for habit, give me an orange, would express the sense of give me an orange, with precision and certainty. In this respect the Latin language has the advantage over the English. But the use of such a short word is not very inconvenient, and the usage cannot be changed. Other languages are subject to the same inconvenience; even the definite articles, or definitives, in Greek and in French, are very often useless, and were it not for usage, would be improper.

ORTHOGRAPHY.

From the period of the first Saxon writings, our language has been suffering changes in orthography. The first writers, having no guide but the ear, followed each his own judgment or fancy; and hence a great portion of the English words are written with different letters, by different authors; most of them are written two or three different ways, and some of them, fifteen or twenty. To this day, the orthography of some classes of words is not entirely settled; and in others, it is settled in a manner to confound the learner and mislead him into a false pronunciation. Nothing can be more disputable to the literary character of a nation, than the history of English orthography, unless it is that of orthoepy.

1. The Saxon diptong a, which probably had a specific and uniform sound or combination of sounds, has been discarded and e generally substituted in its place, as breath, breath. Now eo thus united have not a uniform sound, and of course they are no certain guide to pronunciation. In some instances, where the Saxon spelling was not uniform, the modern orthography follows the most anomalous and difficult, instead of that which is sound and good. Thus meaning of analogous is spelt meaning of analogous is spelt analogous, more generally the latter, and the moderns write feather.

2. The letter g in Saxon words, has, in many English words, been sunk in pronunciation, and either wholly lost, or it is now represented by y or w. The letter d has become d; gear is gear, bugan is bow, and feather is fair.

3. The Saxons who adopted the Roman alphabet, with a few alterations, used c with its hard sound like that of s. Thus tie, like; locian becomes losian. To remedy this
INTRODUCTION.

In this country, many of our best writers have rejected the use of k from all words of this class, and replaced the whole by ui. This is the reason the event; every rejection of an anomaly being a valuable improvement, which sound judgment approves, and the love of regularity will vindicate and maintain. I have therefore followed the orthography of General Washington, who, in his address to the United States, of Ash in his Dictionary, of Mitford in his History of Greece, &c.

8. INTRODUCTION.

The word tale is also ill-formed. The original word on the continent of Europe is talk or talk ; and the change of $k$ into $c$ is not merely needless, but necessary. Hence the word tale becomes talle, the origin of which we see the adjective used is taleke, an awkward compound of a Teutonic word with a Latin termination. This word should be written talk or talk, which would admit regular derivatives, tall, talk, talkless. In like manner, if we were to write a written wind, it would admit the regular adjective windly, as written by Kirwan.

In botany, as the sexual system of the celebrated Swedish naturalist is now generally received, it seems proper to make the new terms, by which branches and orders of plants are designated, a part of our language. Hence, the names of all the genera and species of plants are derived from the Latin language, or from some other classical language. The English and American writers have begun to form adjectives which are at variance with the analogies of our language. We see in books such words as herborizing, monogamous, polygamous, and syneugenesis. The writers who form these adjectives are usually destined to be received by the English and American writers, and they should therefore endeavor to form adjectives which are similar in form to the terminations of the Latin language.

In this case, I have determined to conform the orthography to established English analogies; and in this manner we should be able to form adjectives which are similar in form to the terminations of the Latin language.

In introducing words from other languages, it is desirable that the orthography should be conformed, as nearly as may be, to established English analogies; and in this manner we should be able to form adjectives which are similar in form to the terminations of the Latin language.
INTRODUCTION.

different sounds, in different languages, serve to embarrass the reader who understands only his own.

The irregularities in the English orthography have always been a subject of deep regret, and several attempts have been made to banish them from the language. The first attempt of this kind was made by Sir Thomas Smith, Secretary of State, to Queen Elizabeth; another was made by Dr. Gill, a celebrated master of St. Paul's School in London; another by Charles Butler; and the most elaborate was made by Elphinstone, in the last century; and lastly, another effort was made by Dr. Franklin. The latter gentleman compiled a dictionary on his scheme of reform, and procured types to be cast, which he offered to me, with a view to induce me to prosecute his design. This offer I declined to accept; for I was then, and am still convinced, that the scheme of introducing new characters into the language, is neither practicable nor expedient.

Any attempt of this kind must certainly fail of success. But that some scheme for expressing the distinct sounds of our letters by visible marks, ought to be adopted, is a point about which there ought to be, with a view to engage me to prosecute his design. This offer I declined to make by Dr. Franklin. The latter gentleman compiled a dictionary on his

Pronunciation.

As our language has been derived from various sources, and little or nothing was done to introduce the orthography to that regularity, the pronunciation of the language is subject to numerous anomalies. Each of our vowels has several different sounds; and some of the consonants represent very different articulations of the organs. That part of the language which has been received from the Latin, is easily subjected to a few general rules of pronunciation. The same is the fact with most of the derivatives from the Greek. Many words of French origin retain their French orthography, which leads to a very erroneous pronunciation in English; and a large portion of our monosyllabic words of Saxon origin are extremely irregular both in orthography and pronunciation.

If we can judge, with tolerable certainty, from the versification of Chaucer, the pronunciation of words must have been, in many respects, different in his age, from that of the present day: particularly in making a distinct syllable of e final, and of the termination ed. But no effort was probably ever made to settle the pronunciation of words, till the last century. In England, which was settled by various nations, there are numerous dialects, and consequently many different forms of pronunciation.

The first settlers of New England, were almost all of English origin, and coming from different parts of England, they brought with them some diversities of language. But in the infancy of the settlements, the people had many of their ideas preserved from the natives; and the male inhabitants of the first generation frequently assembled for the purpose of worship or for government. By the influence of these and other causes, particularly by that of common schools, the differs. Another most extraordinary innovation of Sheridan was, his rejection of the Italian sound of a, as in father, calm, ask, from every word in the language. Thus his notation gives ti in bar, the same as in barren, tuteur, tutelage, tumult, as if written txhootor, tshootelage, tshoomult, &c. This pronunciation of t is a cor-

who were in Eno-Ianil between the year 1785 and the revolution, that about that period, the changes into e or a had not taken place, to any extent. It began to prevail on the stage and among the younger barristers and members of parliament, before Dr. Johnson left England, just before the war with America, and Sheridan's Dictionary, published soon after, undoubtedly contributed to fix the pronunciation, which has been universally adopted in the acquisition of a language, whose anomalies were before frightfully formidable and perplexing. The favorers of innovation, seem not to reflect on the immense inconvenience of a correct notation of sounds in a language, by its present possessors. The diphthongs should be left unaltered, and the extensive evil of destroying or impairing the use of alphabetical writing. The man who perverts or changes the established sound of a single letter, especially of a consonant, does an injury to that language, and to the community using it, which fifty men of the same talents, can never repair.

In a few years after the publication of Sheridan's Dictionary, appeared Walker's, the author of which introduces the work to the public, with the following remarks, on the labors of his predecessor. Mr. Elphinston, who, in his principles of the English language, has reduced the chaos to a system, and laid the foundation of a just and regular pronunciation. But this gentleman, by treating his subject with an affected obscurity, and striving to alter the whole orthography of the language, has unfortunately lost his credit with the public, for the part of his labors which entitles him to the highest praise.

After him Dr. Kenrick contributed a portion of improvement, by his Rhetorical Dictionary, but that work is neither correct, nor is it generally imperfect, by entirely omitting a great number of words of doubtful and difficult pronunciation; those very words for which a Dictionary of this kind would naturally be consulted. Let it be noted, that the same objection lies in full force, of the works of Greville, both in England and America.

To him succeeded Mr. Sheridan, who not only divided the words into syllables, and placed figures over the vowels, as Dr. Kenrick had done, but by spelling these syllables as they are pronounced, seemed to complete the idea of a pronunciation, by leaving but little expectation of improvement. It must be confessed that his Dictionary is generally superior to every thing that preceded it, and his method of conveying the sound of words by spelling them as they are pronounced, is highly rational and useful. But the peculiar marks which he has given of impropriety, inconsistency, and want of acquaintance with the analogies of the language, sufficiently show how imperfect I think his Dictionary is, upon the whole, and what ample room was left for attempting another, that might better answer the purpose of a guide to pronunciation.

The first writer on this subject was Mr. Nares, who, in his elements of orthography, has shown a clearness of method, and an extent of observation, which deserve the highest encomiums. But he seems, on many occasions, to have mistaken the best usage, and to have paid too little attention to the first principles of pronunciation.

Soon after the publication of Walker's Dictionary, appeared the Dictionary of Stephen Jones, who undertakes to correct the errors of Sheridan and Walker. This author objects to Sheridan, that he has not introduced the Italian sound of a in father, and that of e in breast, which is so perfectly correct; but it is not correct. It is not correct, because the sound of a in father is nearer to the actual usage in England, than that of either of his predecessors before mentioned. His orthography also is more correct, according to present usage, than that of his predecessors; and it is certain that many irrational animals, without the power of articulation, do utter vowel sounds with great distinctness.

An articulate sound then is properly a sound preceded or followed by, or an articulation or juncture of the organs of speech, which proceeds and follows the vowels or open sounds, which partially or wholly cut off the formation of the mouth. Thus in sounding a or o, the mouth is opened in a particular manner, but without any articulation or closing of the organs. In strictness therefore, a simple vowel is not an articulate sound, as Lovell supposes; and it is certain that many irrational animals, without the power of articulation, do utter vowel sounds with great distinctness.

classes of words, he entirely rejects. He condemns, as a slovenly enunciation, the sound given to d, which, before i and u, Walker directs, in certain words, to be pronounced like j. He rejects also his notation of ch, or tsh, in congratulation, flatsulent, natural, and all similar words. He rejects also the affected pronunciation of Sheridan and Walker, in such words as the, an, and, &c.

Most of the other errors of Walker, he copies, as he does his antiquated orthography.

The English orthoepists have analyzed, and in general, have well defined or described, the sounds and appropriate uses of the letters of the alphabet. Sheridan's analysis, which appeared a few years before Walker's, is for the most part, correct; but in describing the sounds of what may be called the diphthongal vowel i, I think he has erred, in making it to consist of the broad a or aw and e. He admits indeed that the voice does not rest on the sound made by the lips, but this he considers as the result of the preceding one; and the same in the same position, as if it were going to sound aw; but before the voice can get a passage to the lips, the under jaw is drawn up to the position, for sounding e. On this it is justly remarked by Walker, that aw and e are words in the proper enunciation of the English a, and for that aw is pronounced, I would add, then i and ay must be pronounced exactly alike; and if aw is not pronounced, then it is not a component part of the diphthongal vowel.

But this is not the whole evil; this analysis of aw has led orthoepists to give our first or long u, two distinct sounds, or rather to make a diphthong and a vowel of this single letter. Thus they make it a diphthong in almost all situations, except after r, where they make it a vowel equivalent to ow or o in French ow. They represent i as being equivalent to he, and e as being equivalent to ah, which is not the case. The sound of e is not heard in debt, meht, and the e in debt, meht, is not heard in debt, meht. Let any man utter "tawem, awedle," and he will instantly perceive the different sound from that which we are accustomed to give it. The sound of e is not heard in debt, meht, and the e in debt, meht, is not heard in debt, meht.

INTRODUCTION.

culation constitutes the great difference between men and brutes; the latter being unable to articulate, can utter only vocal sounds. The imperfect articulations of the parrot and some other animals form no exception that deserves attention.

1 give the name articulation, to the act of joining the organs, and to the character or letter which represents the junction. In the latter sense, the word is equivalent to consonant; and articulation may be considered the pronunciation proper of the word. In this sense, the term articulation expresses the fact of closing the organs.

Human speech then consists of vocal sounds separated and modified by articulations of the organs. We open the mouth, in a particular manner, to utter a vowel; we then close the organs, interrupt that sound, and open the organs to utter a second vocal sound, and continue this operation accordingly, till the end of the word. This process is carried on with surprising rapidity.

Now in passing from an articulation or close position, to an open position for uttering a vowel, it happens often that a very slight sound of e is uttered, as to be perceptible to the ear, either below or after the utterance of the proper sound; and we are apt insensibly to utter a slight sound of e for r, for such is the nature of that letter, that bare, mire, more, parent, apparent, &c., cannot well be pronounced without a slight sound of e, between the two consonants.

The genuine sound of e long, detached from the influence of consonants, is the same in all the words above specified; and the reason why it has been made a distinct vowel after r, as in rude [rood], is, that the organs are open before the sound commences; whereas when it follows most of our consonants, the sound is commenced immediately after an articulation, or close position of the organs, as in mutable and infusion. For this reason, it has more distinctly its diphthongal sound after labials and palatals, than after r; but this accidental circumstance should not be the ground of radical distinctions, equivalent to the sounds of different letters.

There is, in Walker's analysis of the alphabet, an error peculiar to himself—This is, in making a distinction between the short i when it is followed by a consonant, and when it is not; as in ability. In this case, he calls the first i, in abil, short; but the second he calls open, and equivalent to e in equal. See principles 107, 544. He also makes the unaccented y at the end of a syllable, sound as if it were a vowel, according to his principles would be abilceter. Never was a grosser mistake.

The sound of i and y in unaccented syllables, whether followed by an articulation or not, is always the short sound of e long, that is, e shorten ed; as in city, by or y. The sound of y is equivalent to the sound of i, in all cases, except when they are subject to the diphthongal sound of i in certain words, as in by, city, and in all cases, the division of syllables should, as far as possible, be such as to lead the learner to a just pronunciation.

In consequence of this mistake, Walker has uniformly made a different notation of i when accented, and followed by a consonant in the same syllable, and when it stands alone in the syllable and accented. Thus, he had the first i in ability assigns a different sound from that of the second; and in article, he gives to i the sound of e long, artecke; but in articular, articu late, he gives it the short sound, tik. It is in consequence of this mistake, that he has not been able to distinguish Dictionary and Dictionary; and to i and y unaccented terminating words, the sound of e long; an error, which it is ascertained by actual enumeration, extends to more than eleven thousand vowels or syllables; and an error, which, if carried to the full extent of his principles, would make it impossible to learn English without the most inaccurate pronunciation.

If it should be said, that Walker did not intend to direct y in this case, to be pronounced as e long, but that his notation is intended only to mark the quality of the sound; it may be replied, he either intended the sound to be that of e long, or that of l, by which his accented dictionary would have been rendered entirely useless. If he did not intend his notation is not according to any good practice, either in England or the U.S. States, and by changing a short vowel into a long one, his notation would subvert the rules of metrical composition. If he did not, his notation is adapted to mislead the learner, and it does mislead learners, wherever his book is strictly followed. In truth, this notation is generally condemned in England, and universally rejected in practice.

In the notation of sounds, there is a mistake and inconsistency in all the orthoepists, from which I derive the name of its practical importance, so much, as to expose an error in syllabication or the division of words into syllables, which has been maintained by all writers in Great Britain, from time immemorial. The rule is that "a single consonant between two vowels, or a double consonant at the end of a word, makes it necessary, to break a syllable, detaching one of the letters essential to it, and giving it a place in the next?" In the words above mentioned, hab, bar, ten, are distinct syllables, which cannot be divided without violating the sound of the word, as in these, this syllable is the radix of the word, the other syllable being formative or adventitious. But where this is not the case, convenience requires that syllables should, if possible, be kept entire; and in all cases, the division of syllables should, as far as possible, be such as to lead the learner to a just pronunciation.

As in our language the long and short vowels are not distinguished by differences of character, when we see a single consonant between vowels, we cannot determine, from the preceding vowel character, whether the vowel is long or short. A stranger to the language knows not whether to pronounce habit, ha-bit or hab-it, till he is instructed in the customary pronunciation. It was probably to avoid this inconvenience that our ancestors wrote two consonants instead of one in a great number of words, as in ban-ner, dinner. In this respect however there is no uniformity in English; as we have generally retained the orthography of the languages from which we have received the words, as in tutor, rigor, silent, and the like.

Now it should be observed that although we often see the consonant doubled in some cases, the second consonant is never used in speaking. We close the organs but once between the first and second syllable, nor is it possible to use both the letters n, without pronouncing bau, then intermitting the voice entirely, opening the organs and closing them again. Hence in all cases, when the same consonant is written twice between vowels, as in banner, dinner, better, one of them only is represented by an articulation of the organs, the other is useless, except that it prevents any mistake, as to the sound of the preceding vowel.

In the second edition of this work, I have made it a rule to use the notation of vowels and syllables, that is, toaccord to each syllable only one accent, and to separate the syllables as far as possible. The want of system is observable in all the books which are offered to the public as standards of orthoepy.

A still greater fault, because it may lead to innumerable practical errors, and is not so easily remedied, is the want of uniformity in the pronunciation of the short and long vowels. There are indeed several rules from which, nothing is necessary but an attention to the manner in which the words have been received by us. The want of a uniform system of pronunciation is observable in all the books which are offered to the public as standards of orthoepy.

Walker pronounces the last vowel in natural and national, as a short; Sheridan, as e short, naturel; Jones, as a short, natural. Sheridan's notation may be a mistake, for he gives al in in national, the sound of ul. In the adjective deliberate, Walker and Jones give a in the last syllable its proper long sound; and Sheridan, the sound of e short, deliberate. Dignity is pronounced by Sheridan dignite, and Walker and Jones give to its short sound, as in at. The terminating syllable ness is pronounced by Walker and Jones ness, by Sheridan, as blessedness, blessedness. The same difference exists in their notation of less; Sheridan, pronouncing it lis, as in blinnes, and Walker and Jones,
INTRODUCTION

giving its proper sound. These differences, and many others, run through their works, and appear in a large portion of the all words in the language.
Now it is probable that all these gentlemen pronounced these words alike, or so nearly alike that no difference would be noticed by a bystander. The attempts are made to express minute distinctions or shades of sounds, so to speak, which cannot be represented to the eye by characters. A great part of the notations must, necessarily, be inaccurate, and for this reason, the notation of the letters as well as the sound of the vowels, will be attended with a carefful attention to this subject.
I am persuaded that all such notations are useless, and many of them mischievous, as they lead to a wrong pronunciation. In no case can the true pronunciation of the words in a language be accurately and completely expressed on paper; notions caught only by the ear, and by practice. No attempt has ever been made to mark the pronunciation of all the vowels, in any other language; and in our language it is worse than useless.
As Walker’s pronunciation has been represented to the people of this country as the standard, I shall confine my remarks to him, and a few examples of wrong notation, that the author had been accustomed to some local peculiarities, either in London where all kinds of dialects are heard, or in some other place. In this instance, he gives to these words a pronunciation according to good usage, and just according to our customary pronunciation. While in England, I did not hear a single word of this class pronounced according to Walker’s notation.
3. To the letters ch in bench, bunch, clove, drench, inch,rench, wrenched, and many other words, Walker gives the French sound, that is, the sound of sh in the word standard. I shall confine my remarks to this word, with a view to ascertain its merits, and correct any erroneous impressions which have been received from such representations.
1. The first class of words which I shall mention is, that in which a has the sound of a in fat, bat, fancy, when, in fact, the most respectable usage in England, or in this country.
2. The second class of words is that letter its Italian sound, as we pronounce it io father, psalm, calm. One continued series of differences between the long and short sound of oo is clear and manifest. In this class there are two or three hundred in number, in which Walker gives to a its short sound, and what is called, its Italian sound, as we pronounce it io father, psalm, calm.
3. To the letters ch in bench, bunch, clinch, drench, inch, tench, wrench, and many other words, Walker gives the French sound, that is, the sound of sh in the word standard. I shall confine my remarks to this word, with a view to ascertain its merits, and correct any erroneous impressions which have been received from such representations.
4. It has been already remarked, that Walker’s notation of the sound of i is long, in me, mete, is contrary to all good usage, and is rejected by every other orthoepist, except Jameson. Walker admits i to be short when followed by a consonant in the same syllable. The fact is not so; the broad sound of a is not the initial sound of this diphthong; but the true sound is, y in ability is long e, but ie in the plural is short i. And for this change of sound no provision is made in Walker’s scheme, nor in any other that I have ever seen.
5. In the analysis of the sounds of our letters, Walker adds the diphthong ow, on, to consist of the broad a, or aw, and the Italian sound of u. According to his scheme, about, abundant, round, now, are to be pronounced, aboaw, abowan, rounw, nowu. But whoever heard this pronunciation? It is absurd; for the same sound is uttered by good speakers, or any speakers in deliverance, debate, debar, declare, declare, elect, legitimate, meechanic, medicinal, mental, moral, necessity, peculiar, petition, rebuke, recant, relate, secure, select, velocity, &c. are to be pronounced become, beebeeek, beeebeeek, deebek, deedebeebe, legitegmate, meechanice, meemorial, necessity, peculiar, petition, rebuke, recant, relate, secure, select, velocity, &c.
According to this notation, the first vowel e in evil, even, and in event, that is, the sound of e in the word moderate, is pronounced by Walker as the sound of a. This notation is erroneous and mischievous, as it is inconsistent with the regular accent, which must necessarily be kept up, even in the most careless pronunciation; and in the last syllable of words, moderally, moderateness. In addition to this, the a in the verb to moderate is more distinctly pronounced than it is in the adjective, in which it has the sound of short; the least sound is more nearly the same sound, when an adjective, and when a verb, occurs in a multitude of cases; a distinction which for no provision is made in any system of orthoepists, that I have seen, and one which must be left to the cognizance of the ear alone.
There is another class of vowel sounds which comprises too many inaccu-
racies to be overlooked. This is the class in which the first syllable has an unaccented e, as in debate. In all words of this kind, Walker directs the vowel sound of a that is uttered by good speakers, or any speakers in deliverance, debate, debar, declare, declare, elect, legitimate, meechanic, medicinal, mental, moral, necessity, peculiar, petition, rebuke, recant, relate, secure, select, velocity, &c. are to be pronounced become, beebeeek, beeebeeek, deebek, deedebeebe, legitegmate, meechanice, meemorial, necessity, peculiar, petition, rebuke, recant, relate, secure, select, velocity, &c. are to be pronounced become, beebeeek, beeebeeek, deebek, deedebeebe, legitegmate, meechanice, meemorial, necessity, peculiar, petition, rebuke, recant, relate, secure, select, velocity, &c.
INTRODUCTION.

A great part of English words have an orthography sufficiently regular, and so well adapted to express the true pronunciation, that a few general rules only are wanted as a guide to the learner. Yet there are exceptions, and these are so numerous and important, that it cannot be expected that they will ever be entirely obviated. Any one who has given much attention to the English language, has been familiar with the fact, that the pronunciation of words is not the same in all parts of the country, and even in different families, when the same spelling is used. These variations are, in general, trifling, and have no important effect upon the meaning of the language; but there are exceptions, which, by their force and frequency, have given rise to much controversy. Among the chief of these are the pronunciation of the letters e and i, and the sound of the diphthongs ou and ow.

9. A remarkable instance of inconsistency occurs in the following words.

Armature, aperture, creature, feature, &c. Walker pronounces armature, aperture, creature, feature, overshoot; but forsooth is forsooth, and judicious is judicious. Now also when they make that one syllable in the primitive word, they make two syllables of these letters in the derivatives; partial is parshal, but partiality is parshality. Thus one error has led to another, and a large part of the English orthoepists have been involved in the same error. This is not, however, the only error that has resulted from this practice; there are many others, which, in the case of a single word, might be passed over, but which, when they are collected and examined, will be found to be serious and important. The pronunciation of these letters is, in general, incorrect, and the execution of the work is inconsistent with the rules. This is true of all words of this class, and the pronunciation of these words is, in general, incorrect. The pronunciation of the first vowel can be known from the spelling, but the pronunciation of the second vowel is uncertain, and the sound of the diphthong ou is variable. The pronunciation of the second vowel is uncertain, and the sound of the diphthong ow is variable.

10. Obedience and its family of words. Walker pronounces obedience, obejent, obejently, but disobedience, disobedial, as here written. Expecient is expected, according to his rule; but expectation without the alternative. Why this inconsistency?

11. Obdurate, obduracy, are marked to be pronounced obdurate or objurate, obduracy or objuracy; but obdurately, obdurateless, without an alternative. In these last words occurs another error, the e in the third syllable is made short, as if pronounced r; a deviation from all good usage. This notation of obdurate is inconsistent also with that of indurate, and with that of obdure; an inconsistency which appears to have no plausible pretext.

The conversion of d into j before i is rejected, I believe. In all words, by Jones, Perry and Jameson, and before u is rejected by Perry and Jameson, and in many words by Jones. It is a departure from orthography whollypicable.

12. Walker, Principles No. 92, lays it down as a rule, that when o is preceded by the gutturals hard g or c, [he has said palatal] it is, in polite pronunciation, softened by the intervention of a sound like e, so that cart becomes kert, heart becomes hert, gherard, reghard. Now it is remarkable that in the vocabulary or dictionary, the author has departed from his rule, for in one of the foregoing words, except guard, nor in a multitude of other words which fall within the rule, has he directed this sound of e before the following vowel. Had he conformed to his own rule, he must have perverted the pronunciation of car, carene, care, carcass, cardinal, cargo, garden, garner, discard, and a long list of other words, too long to be here enumerated. The English orthoepists now continue to pronounce guard, heard, heart, ghered, regherd, and a few others. The probable origin of this fault, has been already mentioned, in the case of the letter u. It is an affected pronunciation, which Nares calls "a monster, peculiar to the stage." Indeed this slender sound of e before r is peculiar to the English pronunciation, and is a pronunciation which is peculiarly suited to the genius of the language. Perry and Jameson have rejected it.

13. In the first edition of Walker's Dictionary, the author, under the word tripod, observes, that "all words of two syllables, with the accent on the first, and having one consonant between two vowels, ought to have the vowel in the second syllable pronounced as in ocean, social, circumstanci, &c." This is not consistent with the pronunciation of the words of this class. The exception destroys the value of the rule; and indeed there is, and there cannot be, an exception to words of this class. The pronunciation of the first vowel can be known only by the usage.

14. The derivatives of nation and ratio. Walker and Jones pronounce nashional, rashional. If this should be defended on the ground of the shortening power of the antepenultimate accent, then let me ask why we have not rashional from nation, deshional from devotion, shoushional from shoushory, from station? Why make rules and not apply them? Why indulge such palpable Whiggisms and multiply anomalies?

15. Possess is, by the English orthoepists, pronounced possez; but why not then pronounce assess, assist, assista, concession, obsession, with the sound of s? Can any good reason be assigned for making possess an exception to the pronunciation of this class of words? This utterance of sounds through the nose is always disagreeable to the ear, and should be restricted to words in which usage is established. Good taste should rather induce a limitation, than an extension of this practice. This remark applies also to some words beginning with dis, in which Walker goes beyond other orthoepists in giving to it this nasal sound.

16. Walker lays it down as a fact, that u has the sound of e and oo or yu. This is true in many words, as in union, unite, unanimity, &c. Hence from his notation he considers bent as pronounced bent, bent, but on his principles, would prefix yu to the pronunciation of this sound of e, i.e., the sound of yu. When we hear these words with y, we hear them with a sound that is pronounced uny, without the letter y prefixed. Yet he writes these and similar words with y, yunion, which upon his principles, would prefix y to the pronunciation of the sound of yu, and the pronunciation would be yuynique, or yuynuate. But if we apply this rule upon his principles, we should pronounce yueyrate, yooyrate, yuynimate, yooyrange, yuynur, yuynate, yuynicate, yuynnur, with y, though it must be as proper in the compound as in the simple word. The same inconsistency occurs between use, written yute, yuze, and disuse, disyze.

In this Walker's notation of a, when it has the sound of oo, French on. In the key, he marks o when it has this sound with the letter e. I give the word as a example. Then according to his key, o when thus marked, sounds as oo. But in the vocabulary, he thus marks both oo and ou. Therefore according to his notation, each of the vowels has the sound of oo, and book, look, are to be pronounced boo-look, loo-look. He certainly did not intend this; but such is precisely his direction, or the result of his notation; and a foreigner, without counter-direction, must be led into this pronunciation.

The same fault occurs in his notation of ee, as in meet and seek.

18. Volume, Walker and Jones pronounce volyme; why not then change column into colynm? Will it be said that in volume the u is long? This is not the fact; at least I never heard it thus pronounced either in England or America. It is always short in common usage, and so marked by Perry.

19. Ink, uncle, concord, concourse, concubine, are pronounced by Walker, inck, unckl, konckord, konkhor, konkhabine; and these odious vulgarisms are offered for our adoption. There can be no apology for such attempts to corrupt our language.

20. The words bravery, finery, knavery, nicey, scendency, slavery, arc by Walker and the other orthoepists, pronounced in three syllables, and imagery, in four; the final e of the primitive word being detached from it, and altered with an s before it. What is the origin of such a practice? I do not know. It is obvious that in negligent practice, these words have often been thus pronounced. But the most correct pronunciation is that which gives the original word entire in the derivative, the slight sound of e before r no more constituting a syllable, than it does in more and more. Take the following examples.

Of marble stone was cut
An altar carvd with cunning imagery
Rich carvings, portraiture, and imagery
Of silver, wrought with curious imagery
Spenser
Dryden
Dryden
Spenser

21. Formerly, the words puisness, puisant, had the accent on the second syllable; although the poets seem, in some instances, to have blended the four first letters into one syllable. But the modern change of the accent destroys the value of the rule. The noun is a transferred noun, untransferred, and unpronounced. The penal sound is inconsistent with the limited nature of this Introduction, to enter into an examination of every particular word of disputable pronunciation.

INTRODUCTION.
INTRODUCTION.

This table of words may perhaps be thought a burlesque on English ortho-
thephy. It certainly presents a phenomenon altogether novel in the history of
language.
Of these five authorities, the notation of Perry, with the exception of a
few words ending in ure, is most nearly accordant to the present usage in
England, as far as my observations, while in that country, extended. That
of Walker is by far the most remote from that usage. From an actual enu-
meration of the syllables in certain classes of words in which the vowel
is erroneously pronounced, we may prove that the number amounts to more than twelve thousand, without including several
classes of unaccented syllables, which would swell the number by some
thousands. Of this whole number, I did not, while in England, hear one
vowel pronounced according to Walker's notation. The zeal manifested
in this country, to make his pronunciation a standard, is absolute infatuation,
for the different notation of capitulate and recapitulate?

A remarkable instance of inconsistency in Walker's notation occurs in
words of more syllables than two, ending in ure. Thus we find ure con-
verted into chure [tshure] in

In this class of words, Sheridan and Jones are also inconsistent with them-
seves, though not to the same extent as Walker. Perry and Jameson re-
tain, in all these words, the true orthoepic pronunciation. In no words
also. Walker gives to u, in the last syllable, its first or long sound ; but
this is an inaccurate notation; the sound, in actual usage, is that of short u,
at least so far as my observation extends, either in England or the United States.

In the following classes of words, as pronounced by Walker, there is either
error or inconsistency, or both.

It would seem that, in a large part of these words, we may take our choice,
either to retain the proper sound of d, or to convert it into that of j. This
choice certainly makes an odd kind of standard. But why mediate should
retain the sound of d, while immediately and medium suffer a change; or
why radiate should be given in the alternative, radiate or rajete, while
infradiate and infradiance are not subjected to any change; or why obedi-
ence should be changed into obejence, and disobedience remain unchanged,

These classes of words exhibit a specimen of the modern orthoepy, so
called, of our language; it is indeed a brief and imperfect specimen, for I
have ascertained by actual enumeration, that a catalogue of all the differen-
tes of notation in these authors, would comprehend about one third of all the
words in their vocabularies. Amidst this mass of errors and contradictions,
our consolation is that the good sense of the English nation, a learned and re-
pectable people, is triumphing over the follies and caprices of fashion, and
turning on this most mischievous spirit of innovation.

In proportion as the importance of settled usages and of preserving invio-
late the proper sounds of letters, as the true and only safe landmarks of pro-
unciation, shall be appreciated by an enlightened people, just in that propor-
tion will all attempts of affected speakers to innovate upon such estab-
lished usages be resisted.

The intentions of the men who have undertaken to give a standard of pro-
unciation, have unquestionably been upright and sincere; but facts have
proved that instead of good they have, on the whole, done harm; for instead
of reducing the pronunciation of words to uniformity, they have, to a consider-
able extent, unsettled it, and multiplied differences. The whole process of
these attempts, from Sheridan's first publication, is within my memory,
and I am confident, that whatever has been the effect of these attempts in
Great Britain, the result of them in the United States, has been to multiply
greatly the diversities of pronunciation. And such is the present state of the
authorities, offered as standards, that it is impossible from books to gain a
correct knowledge of what is the general usage. If I had no other means of
knowing this general usage, than the English books, I should be utterly un-
able to ascertain it and should give up the attempt as hopeless.*

Some of the differences of notation, in the several books, may be rather ap-
parent than real; but with all due allowance for this imperfection of the
schemes, I am persuaded there are ten differences among these ortho-
pists, where there is one in the actual pronunciation of respectable people
in England and the United States; and in most of them, the notation, if strictly
followed, will lead to ten differences of pronunciation, where one only now
exists in the actual practice of the two countries.

This effect of multiplying doubts and diversities, has resulted from very
obvious causes.

1. The limited acquaintance of orthoepists with the general usage, and

*The multiplicity of books for instructing us in our vernacular language is an evil of no small magnitude. Every man has some peculiar notions which he wishes to propagate, and there is scarcely any peculiarity or abs-
surdity for which some authority may not be found. The facility of book-
making favors this disposition, and while a chief qualification for authorship is a dextrous use of an inverted pen, and a pair of scissors, we are not to ex-
pect relief from the evil.
INTRODUCTION.

I have availed of the means at my command for ascertaining the actual pronunciation of the words in this work, from my own personal observations in both countries, and of the observations of American gentlemen of erudition who have visited England. In selecting from a mass of contradictory authorities, I may not, in all cases, have adopted the pronunciation which proceeds from a due succession of accented and unaccented syllables. There are some words, differently pronounced by respectable people, in which no decisive reasons appear for preferring one mode of pronouncing them to another; either might be adopted, without any injury to melody or analogy. I see no particular reason, why patient should have its first vowel short, and malton, patron, and patriot, the first vowel long. Much less do I approve the reasons assigned for making the a short in matronal, and short in mild, or in mil, or in mildness, or in mildness; the reasons assigned by Walker appear to me to be absolute truism. The rule of uniformity is paramount to every other, excepting that of general undisputable custom; and when the practice is unsettled, it seems to be the duty of the lexicographer to be guided by that rule, for his authority may lead to the consequences it is designed to prevent.

In a few instances, the common usage of a great and respectable portion of the people of this country accords with the analogies of the language, but not with the modern notation of English orthoepists. In such cases, it seems expedient and proper, to retain our own usage. To remove a practice confessedly regular for one confessedly anomalous, out of respect to foreign usage, would hardly be consistent with the dignity of lexicography. When we have principle on our side, let us adhere to it. The time cannot come when a national language should be permitted to be wrested from the leading strings, and walk in their own strength; and the more we can raise the credit and authority of principle over the caprices of fashion and innovation, the nearer we approach to uniformity and stability in practice.

The English language is a nervous, masculine language, well adapted to popular eloquence; and it is not improbable that there may be some connection between the capacity for popular eloquence and the capacity for the language, as for as these can be definitely ascertained; having however been made by their favorites. The spirit is continually producing new books and new schemes of orthoepy, and every additional book serves only to increase the difficulty of uniting opinions and establishing uniformity.

This view of the subject is probably the most favorable that can be presented. The real fact seems to be this: these men have taken for the standard, what they were pleased to call the best usage, which, in many cases, is a local usage or some peculiarity of particular speakers: they may get up a set of rules and react upon each other mutually, as cause and effect, and each contribute to the preservation of the other. At the same time, the language is, by no means, incapable of such is directed in books of orthoepy, that no man can possibly acquire the meaning, with little or no aid from the strength and beauty of language. The language of popular eloquence should be neither the mooting stage of the stage, nor the making affectation of dandies, nor the baby talk of the nursery. Such was not the language of Demosthenes nor of Cicero; and such never was the language of the British Chatham, and of the American Ames.
INTRODUCTION.

which it has cost me more labor to unlearn than to learn; that if I can pre-
vent my fellow-citizens, who have the taste for this study, from being subject-
to the same evils, I shall think the advantage obtained more than a bal-
ance for any unmerited imputation.

The first example of etymology which I shall mention is, that of Josephus,
the historian of the Jews, who informs his readers, that the first man "was
the image, the likeness of God, after his own image, and after his likeness,
Not that God has any bodily shape of which man can be the image, but that
his knowledge of the origin of words did not extend beyond the most
obvious facts and principles. Thus I rely the characteristic concurrence of
words used in relation to the species, the image, the likeness of God, and
the generic name of the human species, and like man in English, signifies
root of oig-ej-, or the Greek αὐτός; hence, to obliterate, because the ancients
used to write on wax tablets, and I have no reason to doubt that the
word written hímer that hímera was written by the Sabines fresce, and herba,
felus.

Very different must be our opinion of the following etymologies. Futer, says Varro, is from puteo; ager vuulus is so called because in it
weeds coalesce or unite, with the fourth, referring ago to his description of
the root of aeg, or the Greek ἄγω. Campus, he says, was so named because
fruits were first gathered from the open field, because the root of oino, or it was so called because it pours forth [fundat] nwn. because
which appeared to be the foundation of cattle and money was called fundus,
next to this, were the hills, colles, so named colendo, from cola,
the mind flies instantly whither it will. Howlowmu-i; of
the same shape as the ancient scepter.

Distinguished for his achievements as a warrior; and this name must have
confounding words of different elements. Hercules then
which I have perused, began his work on a good plan, that of bringing to-
gothic and Teutonic origin, with industry and probably with judgment and a
lepremu, v. or to obliterate, because the ancients used to write on wax tables, and

* Of the full value of these encomiums we can hardly judge, as most of
Varro’s writings have perished, and some of those which survive appear in a
multiform state. But the greater his erudition, the more striking will ap-
ppear his ignorance of this subject.
INTRODUCTION.

The Hermetists Harris, according to Dr. Lowth, "is the most beautiful and perfect example of analysis, that has been exhibited since the days of Aristotle." This, in my opinion, is not the character of the work, which, for the most part, consists of passages from the works of Aristotle and other authors. A portion of the work is original. It is little more than a collection of the opinions of the ancient writers on philology, whose metaphysical subtleties rather obscure than illustrate the subject. To show how easily men may be misled by metaphysics, when applied to the plainest subject imaginable, let us examine an essay from the Hermes.

"A respects our primary perception, and denotes individuals as an unknown; the respects our secondary perception, and denotes individuals as known." [This is nearly a literal translation of a passage in Priscian, Lib. 17.]

"There is a beggar with a long beard"—indicating that the man had not been seen before; and therefore a denotes the primary perception. A week after the man returns and I say, "There goes the beggar with the long beard," the article here indicates the secondary perception, that is, that the man had been seen before. All this is very well. But let us try the rule by other examples, and see whether it is universal, or whether it is the peculiar and proper office of an or a to denote primary perception.

"The article a, says Harris, leaves the individual unasserted." Let us examine this position.

"But Peter took him, saying, stand up; I myself also am a man." Now, according to Harris, a here denotes the primary perception, and the individual is supposw. That is, this man is one, I have never seen before.

"He that cometh to God must believe that he is, and that he is a reward of them that diligently seek him." Whether a, in this sentence, denotes first perception, I cannot determine; but sure I am the individual is not less

A B says to me, "I have lately dismissed an old servant, who has lived with me for thirty years." Here an may present a primary perception to the hearer, but not so to the speaker. To both, the individual must be well

It appears then that this definition of an or a is incorrect, and the points of these metaphysical writers who form such perfect analyses of language, is little better than learned trifling. On testing the real character of an or a by usage and facts, we find it is merely the adjective one, in its Saxon or orthography, and that its sole use is to denote one, whether the individual is known or unknown, definite or indefinite.

Again Harris translates, and adopts the definition which Aristotle has given. An article is not an essential or part of speech devoid of signification by itself, but so formed as to help signification, by making two or more significant sentences to be one significant sentence.

This is so far from being true, that some of the conjunctions are verbs, equivalent to join, unite or add, in the imperative mode. In like manner, the prepositions called inseparable, and used as prelxxes, are all significant per se, although by custom, they sometimes lose their appropriate use.

But let us try the rule by other examples, and see whether it is universal, or whether it is the peculiar and proper office of an or a to denote primary perception.

"The article a, says Harris, leaves the individual unasserted." Let us examine this position.

"But Peter took him, saying, stand up; I myself also am a man." Now, according to Harris, a here denotes the primary perception, and the individual is unspecified. That is, this man is one, I have never seen before.

"He that cometh to God must believe that he is, and that he is a reward of them that diligently seek him." Whether a, in this sentence, denotes first perception, I cannot determine; but sure I am the individual is not less

A B says to me, "I have lately dismissed an old servant, who has lived with me for thirty years." Here an may present a primary perception to the hearer, but not so to the speaker. To both, the individual must be well

It appears then that this definition of an or a is incorrect, and the points of these metaphysical writers who form such perfect analyses of language, is little better than learned trifling. On testing the real character of an or a by usage and facts, we find it is merely the adjective one, in its Saxon or orthography, and that its sole use is to denote one, whether the individual is known or unknown, definite or indefinite.

Again Harris translates, and adopts the definition which Aristotle has given. An article is not an essential or part of speech devoid of signification by itself, but so formed as to help signification, by making two or more significant sentences to be one significant sentence.

This is so far from being true, that some of the conjunctions are verbs, equivalent to join, unite or add, in the imperative mode. In like manner, the prepositions called inseparable, and used as prelxxes, are all significant per se, although by custom, they sometimes lose their appropriate use.

For example, re, which denotes repetition, has lost its use in recommend, which is equivalent to command, without the sense of repetition. But still it has ord. and form, which is the root of all the derivatives, and can only be prefixed to a word. Let any person prefix this word to pronounce the first time, and direct a boy of fourteen years old to repronounce his oration, and he would perfectly well understand the direction.

Bryant, the author of "An Analysis of the Mythical Language," whose works I should have wished to consult, has given to the public a history of the Cuthites or descendants of Ham, a race of bold adventurers, who, as he supposes, made expeditions by sea and land, introducing arts, founding cities, and corrupting religion by the propagation of Sabulism. For proof of his opinions, he relies very much on etymology and the signification of names. Two or three examples of his deductions will be sufficient to show his manner of proof. Homo or Chamm, signifying heat and the sun, he deduces from DION to be hot, to heat. So far he may be correct. But he goes on to deduce from this root, also, as Castle had done before him, the Greek θαυμα, heat, not considering that this is from ws, to burn, in which μ is not radical, but probably s is the radical consonant, as this occurs in the derivatives. θαυμα has no connection with Θαυμα, heat or Chamm. From Cam or Chamm he then deduces the Hebrew קָבָל, kabal, with which our Chamar, though it is not easy to discover the connection between this word and heat, and from the same root, he de- duces קָבָל, קָבָל, and many other words, without any support for his opinions, but a mere similarity of orthography in the first syllable. In all this, he is certainly wrong.

The Greek θεός, God, he supposes most unwarrantably to be formed from the Egyptian θεός or Thoth, Mercury.

The sun he supposes to have been styled El-ες; El [α]ς and μ or ω, a title of honor among the Babylonians. This word, says Bryant, the Greco-Latin word for sun, and hence the Latin луне, luna, and hence the Latin θεός, the sun, and hence the Greek θεός, God, the Sun, and hence the Greek θεός, God, is a word directly distinct from all which the author has mentioned.

The author proceeds to say, "that the more common etymology for death, among all nations, is mor, mort or mot." But if either of these terms for death, is a native word among the great Greek, Latin, and Slavonic families, which constitute the bulk on two-thirds of all the inhabited parts of Europe.
INTRODUCTION.

I have not been able to find it. Besides, nor and mark are words radically distinct, and the origin of different families. "Sir," says the author, "is, in our language, the common title of respect; and the same term is employed in the same sense throughout every quarter of the globe. In the Saxon and Persian, it means the organ of the head itself." He finds the word in Arabia, Turkey, in Greek, among the Persians in South America, in Germany, Holland, and the contiguous countries. In some of the languages of these countries, I have found no such word; but if it exists, the author's inference, that the name of the head gave rise to this term of respect, (for this is what I understand him to mean,) is totally unfounded; and equally fanciful and unfounded is his supposition, that, by the loss of h from her, the pronoun her, and the German herr, lord, are to be deduced from sir. In all this, it is demonstrably certain there is no truth or even semblance of reality.

Men, the author deduces from the Hebrew צ"ל to discern or discriminate, [a sense I do not find in the Lexicons.] and hence he infers that the radical idea of man is that of a thinking or reasoning being. With this word he connects Menes, Menos, and men, mind; a sweeping inference made at random from the similarity of orthography, without a distant conception of the true primary meaning of either of these words. But what is worse, he appears, if I do not mistake his meaning, to connect with these letters, or a coincidence of cognates, in different languages; no affinity being certain unconnected with man. See the words father, m, mother, f, and still, a, in the Dictionary.

The author offers some other etymologies and affinities equally remote from truth, and even from probability.

The governing principles of the language are, first, the identity of radical letters, or a coincidence of cognates, in different languages; no affinity being admissible, except among words whose primary consonants are articulations of the same organs, as B, F, M, P, V, and W; or as D, T, Th, and S; or as G, K, H, R, and L. Some exceptions to this rule must be admitted, but not without collateral evidence of the change, or some evidence that is too clear to be reasonably rejected.

Second. Words in different languages are not to be considered as proceeding from the same radix unless they have the same signification, or one closely allied to it, or naturally deducible from it. And on this point, the knowledge of the primary sense of words, and of the manner in which collateral senses have sprung from one radical idea, is necessary to secure the inquirer from many mistakes. A competent knowledge of this branch of etymology cannot be obtained from any one, or from two or three languages. It is almost literally true, that in examining more than twenty languages, I have found each language to throw some light on every other.

That the reader may have more clear and distinct ideas of what is intended by commutable letters and the principles by which etymological deductions are to be regulated, it may be remarked that commutable or interchangeable letters are letters of the same organs; that is, letters or articulations formed by the same parts of the mouth. Thus b, m, and p, are formed immediately by the lips, the position of which is slightly varied to make the distinction between these letters. F and v are formed by the lips, but with the aid of the upper teeth. Now the difference of the joinings of the organs to utter these letters is so small, that it is easy for men in utterance to slide from one form into another.

The following examples will illustrate this subject.

Labial letters commuted for other labials.

Eng. bear, Lat. ferre, lat. pario, G. ippe, ippe, D. voeren, G. fuhren.

English bear, Lat. ferro, pario, G. ippe, ippe, D. voeren, G. fuhren.

Here is the same word written in different languages, with five different initial letters.

German urah, true, L. verus.

Celtic labh, the hand, Goth. lofha.

L. guberno, Fr. gouverner, Eng. govern.

Dental letters commuted for other dentals.

Eng. den, G. daun.

Eng. good, G. gut.

Eng. dare, Gr. ἀπάσσει.

Eng. dag, G. dag.

Eng. thank, Dr. thank.

Eng. brother, D. broeder.

Palatal letters commuted for other palatales.

Eng. tail, G. tail.

Eng. get, Lat. cattare.

Greek χεῖρ, L. hiems, winter.

Dentals converted into sibilants.

Eng. water, G. wasser.

Lat. dens, a tooth, G. zahn.

Eng. let, Fr. laisser.

Ch. θ, Heb. γτ.

Sax. tid, time, G. zeit.

regulated. And it is to be extremely regretted that these principles should not be in any instance, be neglected, or forced to yield to arbitrary reasons of derivation, or to a pedantic affectation of foreign pronunciation. When we know that the great mass of the words are naturally fall into a particular manner of pronounce a word, without any rule or instruction, we may rely upon this tendency as a pretty certain indication that their accentuation is according to the analogies of the language, by which their habits of speaking have been formed; and this tendency cannot be opposed without doing violence to these analogies and to natural habits.

Thus formerly, the word horizon was universally accented on the first syllable, and this accentuation was according to the settled analogy of the language. But the early poets had a fancy for conforming the English to the Greek pronunciation, and accentuating the last syllable; and the orthoepists followed them; and now we have this forced, unnatural pronunciation of the learned in collision with the regular, analogous popular pronunciation. By this affectation of the Greek accent, the flowing smoothness of the word is ruined.

In like manner, an imitation of the French pronunciation of confesseur, and successeur, led the early poets to accent the English words on the first syllable, in violation of analogy and euphony; and some orthoepists affect to follow them; but public usage frowns on this accentuation, and rejects their authority.

There are many words in the English language, indeed a large part of the whole number, which cannot be reduced under any general rule of accentuation, as the exceptions to any rule formed will be nearly as numerous as the words which the rule embraces. And in most instances, we shall find, in the structure of the words, satisfactory reasons for the difference of pronunciation.

Dissyllables.

No general rule can be given for the accentuation of words of two syllables. It is, however, worth observing that when the same word is both a noun or an adjective and a verb, it happens, in many instances, that the noun or adjective has the accent on the first syllable, and the verb on the last. Instances of which we have in absent, to absent; concert, to concert; export, to export. The reason is, the preterit and participles of the verbs require to have the same syllable accented, as the verb; but if the first syllable of the preterit and participles were to be accented, it would be difficult to pronounce the words, as may be perceived by attempting to pronounce obseving, conestablished, conducted, with the accent on the first syllable.

In a few instances, the word has a different accent when a noun, from that which it has when an adjective; as August, augst; gallant, gallant.

Trissyllables.

Words of three syllables, derived from dissyllables, usually retain the accent of their primitives. Thus:

Poet, pietses; pleas'ant, pleas'antly; gracious, graciously; relate, re- lated; pd'telle, pd'test.

In like manner, words of four syllables, formed from dissyllables, generally retain the accent of the primitives; as in collect'd from collect', ser- viceable from service.

In all cases, the preterit and participles of verbs retain the accent of the primitive.

Words ending in iating, lion, iariam, ions, iat, tiate, tient, have the accent on the syllable preceding that termination; as motion, christian, precious, erudition, patient, &c.

Trissyllables ending in ment, for the most part, have the accent on the antepenult; as gratuity, propriety, prosperity, insensibility.

The accent of all these words, as also, of many words in which the termination is -sion, -tion, -sion, -cious, -tious, -tious, -tial, -tiate, -tient, has been either wholly overlooked, or not sufficiently observed in practice. Hence the orthoepists accent the second syllable of all these words, as cellulose, demonstrating, compensating, &c.

There are some words which, in poetry and prose, must be differently accented, as the accent has been transferred from the first syllable to the second, as in the following:

The accent on the first syllable of iather, legislator, legislature, the accent on the first syllable can hardly be distinguished from that on the third; and if a speaker were to say the primary accent, the third syllable, his pronunciation would hardly be noticed as a singularity. Indeed there are some compound words, in which, if we wish for any extremely slight distinction of accent, that it is deemed unnecessary to mark either syllable or part of the word as accented.

As to a great part of English words, their accent must be learned from dictionaries, elementary books, or practice. There is no method of classification, by which they can be brought under a few simple general rules, to be easily retained by the memory; and attempts to effect this object must only burden the memory, and perplex the learner.

The words accessory, desolatory, exemplary and peremptory would all have the accent on the second syllable, were it not very difficult, with this accent, to articulate the last syllables of the derivatives, accessory, &c.

A method of classification, which the orthoepists incline to accent on the first syllable. But with regard to most of these words, their accentuation is contrary to common usage, and with regard to all of them, it ought to be rejected. The ease of pronunciation requires the accent on the second syllable, and no effort to remember it can ever succeed.

The mistakes in etymology are numerous; and the whole scheme of deducing words from their original is extremely imperfect.

8. The manner of defining words in Johnson, as in all other dictionaries, is susceptible of improvement. In a great part of the more important words, and particularly verbs, lexicographers, either from negligence or want of experience, have omitted to give the full sense of the word; and in those cases in which the definitions are imperfect, there is a primary sense of every word, from which all the other have proceeded; and whenever this can be discovered, this sense should stand first in order. Thus the primary sense of make is to enforce or produce; and of the word pass, the fifteenth definition; and this of facio in Ainsworth, the nineteenth.

9. One of the most objectionable parts of Johnson's Dictionary, in my opinion, is the great number of passages cited from authors, to exemplify his interpretations. Most English dictionaries are improperly supported by authority, perfectly understood, and the sense of them so little liable to be called in question, that they may be safely left to rest on the authority of the lexicographer, without examples. Who needs extracts from three authors, Knolles, Milton and Berkeley, to prove or illustrate the literal meaning of bound? Who needs extracts from Shakespeare, Bacon, South and Dryden, to prove hammer to be a legitimate English word, and to signify an instrument for driving nails? So under household, we find seven passages and nearly thirty lines employed to exemplify the plain interpretation, a family living together.

In most cases, one example is sufficient to illustrate the meaning of a word; and this is not absolutely necessary, except in cases where the significance is a deviation from the plain literal sense, a particular application of the term; or in a case, where the sense of the word may be doubtful. Johnson, however, has never been able to resist the temptation of making his definitionsserve to swell the size of a Dictionary, without any adequate advantage. But this is not the only objection to Johnson's exemplifications. Many of the passages are taken from authors now little read, or not at all; whose style is now antiquated, and by no means furnishing proper models for students of the present age.

1. The want of a great number of well authorized words belonging to the language. This defect has been in part supplied by Mason and Todd; but their supplemental list is still imperfect even in common words, and still more defective from the omission of terms of science.

2. Another great fault, that remains uncorrected, is the manner of noting the accent. It is now generally agreed that the accent must depend on public taste or the utility of the words; circumstances which govern the selection all new terras; as these are often necessary to express new ideas; and requiring a place in dictionaries, to terms given to things newly discovered.

The catalogue of obsolete words in Johnson has been considerably augmented by Mason and Todd. I have, though somewhat reluctantly, inserted all new terras; as these are often necessary to express new ideas; and requiring a place in dictionaries, to terms given to things newly discovered.

The principal faults in Johnson's Dictionary are

3. It is considered as a material fault, that in some classes of words, Johnson's orthography is either not correct upon principle or not uniform in the class. Thus he writes heedlessly, with s, but carelessly, with e; prose, with o; prose, with c; prose, with s; prose, with e. He has, however, the advantage of a more ancient orthography, in which the accent is laid uniformly on the vowel, whether it is long or short. It is surprising that such a notation should still be retained in that work.

4. It is also useful both to natives and foreigners, to be able, by opening a dictionary, to know when the final consonant of a verb is doubled in the participle. But the lexicographer is not answerable for the bad use of the privilege of exception, which are not within the lexicographer's control.

and perhaps, to ten thousand words. Most of these may be useful to the antiquary; but to the great mass of readers, they are useless.

I have also diversified many words which are local in England; being retained from the different languages that have been spoken in that country, but which are no more a part of our present language in the United States than so many Lapland words. These however occur in books which treat of agriculture and the arts; books which are occasionally read in this country.

Law-terms, which are not a part of the proper language of the U. States, and never can be, as the things they express do not exist in this country, are however retained, as it is necessary that the gentlemen of the bar should understand them; and it will be time to dismiss them from books, when they are obsolete in practice.

As toAmericism, so called, I have not been able to find many words, in respectable use, which can be so denominated. These I have admitted, and noted as peculiar to this country. I have fully ascertained that most of the new words which are in vogue, are either地方isms, or mere rote expressions, in imitation of foreign languages. In exhibiting the origin and affinities of English words, I have usually placed first in order the corresponding word, in the language from or through which we have received it; then the corresponding words in the languages of the same family or race; then the corresponding word in the languages of other families. Thus, for example, the word break we have from our Saxon ancestors; I therefore give the Saxon word first; then the same word in the other Teutonic and Gothic languages; then the Celtic words; then the Latin, and lastly the Hebrew, Chaldir and Arabic. This order is not followed in every instance, even of vernacular words, but in the more general course I have pursued. When there can be no rational doubt respecting the radical identity of words, I have inserted them without any explanation; but I have inserted any word without a corresponding word, or inserted an interrogative word, to inquire further investigation. Yet I am aware that many things, which, in my view, are not doubtful, will appear to persons not versed in this subject, and who do not at once see the chain of evidence, which lies of men, which use them, are to be considered as of the same antiquity with vernacular words in the English; they are offered as affinities, or the participle of a verb; not that our ancestors borrowed the word from the Chaldeans, Hebrews or other Semitic nation. This is the Latin pronunciation, or conizance, or conizance.

In noting the obsolete words which amount to some thousands, I may have committed mistakes; for words obsolete in one part of the British dominions, or in some part of the United States, may be words in common use, in some other part. In this respect, modern writers must be less trusty than we. I have generally observed has been to note as obsolete such words as I have not heard in colloquial practice, and which I have not found in any writer of the last century. The notation of such words as are disputed may be of use to those who are accustomed to a different class and retch the orthography of the ancient, and not so many Lapland words. These however occur in books which treat of agriculture and the arts; books which are occasionally read in this country.

In the orthography of certain classes of words, I have aimed at uniformity; not that our ancestors borrowed the word from the Arabic but as proceeding from a common radix. This is not the fact. It would be just as correct for the com-
In the year 1803, I received a Letter from Lindley Murray, with a copy of his Grammar. The following is a copy of the Letter.

"I take the liberty of requesting that the author of 'Dissertations on the English Language,' will do me the favor to accept a copy of the new edition of my grammar, as a small testimony of my respect for his talents and character. At the same time, I hope he will permit me to thank him for the pleasure and improvement, which I have derived from perusing his ingenious and sensible writings.

"If, on looking over the Grammar, any thing should occur to him, by which he thinks the work may be further improved, I will take the communication of it, as a particular favor; and will give it an attentive and respectful consideration. Should he prepare any remarks, he will be so good as to send his letter to my brother John Murray, jun., Pearl Street, New York, who will carefully forward them to me.

I am very respectfully, &c.

LINDLEY MURRAY."

Holdgate, near York, 1803."

Twenty years before the date of this letter, I had prepared and published a Grammar, on the model of Lowth's, with some variations, and on the same principles, as Murray has constructed his. This work passed through many editions, before Murray's book appeared in this country. But before this period, my researches into the structure of language had convinced me that some of Lowth's principles are erroneous, and that my own Grammar wanted material corrections. In consequence of this conviction, believing it to be immoral to publish what appeared to be false rules and principles, I determined to suppress my Grammar, and actually did so; although the public continued to call for it, and my bookseller urged for permission to continue the publication of it. As I had the same objections to Murray's Grammar, as I had to my own, I determined on the publication of a new work, which was executed in 1807; and with a view to answer Lindley Murray's request, but in a different manner, I sent him a polite letter; with a copy of my Grammar. I have understood from his friends in New York, that these never reached him; but he received a copy of my Grammar from his friends, and soon afterward prepared for publication a new edition of his own Grammar, in the octavo form. In the preface to this edition, dated in 1808, he informs his readers, that, "in preparing for the octavo edition, the author examined the most respectable publications on the subject of grammar, that had recently appeared; and he has, in consequence, been the better enabled to extend and improve his work." On carefully comparing this work with my own Grammar, I found most of his improvements were selected from my book.
ADVERTISEMENT.

In the first edition of this work, the compiler gave me credit for one passage only, (being nearly three pages of my Grammar,) which he acknowledged to be chiefly taken from my work. In the later editions, he says, this is in part taken from my book, and he further acknowledges that a few positions and illustrations, among the syntactical notes and observations, were selected from my Grammar. Now the fact is, the passages borrowed amount to thirty or more, and they are so incorporated into his work, that no person except myself would detect the plagiarisms, without a particular view to this object. It may be further observed that these passages are original remarks, some of them illustrating principles overlooked by all British writers on the subject.

This octavo edition of Murray's Grammar, has been repeatedly published in this country, and constantly used in our higher seminaries of learning; while the student probably has no suspicion that he is learning my principles in Murray's Grammar.

For the injustice done to me, by this publication, in violation of the spirit, if not of the letter of the law; for securing to authors the copy-right of their works, I have sought no redress; but while I submit to the injury, it seems to be my duty to bear testimony against this species of immorality. A man's reputation, and character, and writings, are as much his property, as his land, and it is to be hoped that correct morality will, in due time, place the protection of the former on as high ground as that of the latter.

Being perfectly satisfied that some principles of Lowth's Grammar, which constitutes the body of Murray's, are entirely erroneous, I have prefixed a brief Grammar to this Dictionary; which is committed to my fellow citizens, as the mature result of all my investigations. It is the last effort I shall make to arrest the progress of error, on this subject. It needs the club of Hercules, wielded by the arm of a giant, to destroy the hydra of educational prejudice. The club and the arm, I pretend not to possess, and my efforts may be fruitless; but it will ever be a satisfaction to reflect that I have discharged a duty demanded by a deep sense of the importance of truth. It is not possible for me to think with indifference, that half a million of youth in our schools are daily toiling to learn that which is not true. It has been justly observed that ignorance is preferable to error.

Some of the more prominent errors of the English Grammars, are,

1. The admission of the article, as a distinct part of speech, and an entire mistake respecting what is called the indefinite article. The word article signifies, if any thing, a joint; but there is no class of words, unless it may be the conjunctions, which can, with a shadow of propriety, be brought under that denomination. The words called articles, are, in all languages, adjectives; words limiting or in some way qualifying the sense of names or nouns. In most languages, they are varied like the nouns which they qualify, and attached to them like other adjectives.

2. The arrangement of words in a class to which they do not belong. Thus, that is called sometimes a pronoun, and sometimes a conjunction, when in fact it is always a pronoun or substitute, and never a conjunction. So also if, though, unless, notwithstanding, are called conjunctions; which is a most palpable mistake. Nevertheless, is placed by Murray among the conjunctions. But after he procured my Grammar, he inserted, under his twenty-first rule of Syntax, the following remark. “It is very frequent, when the word notwithstanding agrees with a number of words, or with an entire clause, to omit the whole, except this word; and in this use of notwithstanding, we have a striking proof of the value of abbreviations in language,” &c. The whole passage, taken from my Grammar, and the two subsequent passages, are too long to be here recited. The remark to be made here is, that the author, by attempting to patch a defective system, falls into the absurdity of making notwithstanding a conjunction, in one part of his book, and in another, he makes it a word agreeing with a number of words, or with an entire clause!

3. There is no correct and complete exhibition of the English verb in any British Grammar which I have seen. The definite tenses, which are as important as the indefinite, are wholly wanting; and the second future in Murray is imperfect. It seems that he had in his first editions inserted this form, thou shalt, or ye shall have loved, but in his octavo edition, he informs us that shall in the second and third persons is incorrectly applied. To prove this, he gives the following examples. “Thou shalt have served thy apprenticeship, before the end of the year.” “He shall have completed his business, when the messenger arrives.” Very true; but the author forgot that by placing when or after, as an introduction to the sentence, the use of shall is not only correct, but in many cases, necessary. When thou shalt or you shall have served an apprenticeship, after he shall have completed his business, are perfectly correct expressions. But in consequence of this oversight, Murray's second future is defective throughout the whole paradigm.
4. The Syntax of every British Grammar that I have seen, is extremely imperfect. There are many English phrases which are perfectly well established and correct, which are not brought within the rules; and of course they cannot be parsed or resolved by the student.

5. There are several false rules of construction which mislead the learner; rules which are in direct opposition to the practice of the best writers.

6. There are some phrases or modes of expression, frequently used by authors, which are not good English, and which it is the business of the Grammarian to correct, but which are not noticed in any British Grammar. Some of these have been considered in the preceding Introduction.

There is a great difficulty in devising a correct classification of the several sorts of words; and probably no classification that shall be simple and at the same time philosophically correct, can be invented. There are some words that do not strictly fall under the description of any class yet devised. Many attempts have been made and are still making to remedy this evil; but such schemes as I have seen, do not, in my apprehension, correct the defects of the old schemes, nor simplify the subject. On the other hand, all that I have seen, serve only to obscure and embarrass the subject, by substituting new arrangements and new terms, which are as incorrect as the old ones, and less intelligible.

On the subject of the tenses of the verbs, for example, we may attempt philosophical accuracy, and say that there are, and there can be three tenses only, to express the natural division of time into past, present, and future. But a language which should have words to express these three divisions only, would be miserably imperfect. We want to express not only the past, the present, and the future, with respect to ourselves or the time of speaking and writing, but the past with respect to other times or events. When we say, the mail will have arrived before sun-set, we express not only a future event, at the time of speaking, but an event to be past before another event, the setting of the sun. Hence I have given to that form of words, the denomination of the prior-future. So of the past time. He had delivered the letter, before I arrived, denotes an event not only past, as to the time of speaking, but past before another event, my arrival. This tense I call the prior-past. These denominations, like the terms of the new chemistry, define themselves. The old names of the latter tense, pluperfect or preterpluperfect, more than finished or past, or beyond more than finished or past, I have discarded. These small alterations of the old system will, I hope, be well received.

If it should be said, that our verbs have not tenses, because they have not variations of termination to express them; I would reply, that this may be considered as a mistake, proceeding from an early bias, impressed upon us by the Greek and Latin forms of the tenses. A tense is a term intended to denote a form of verbs used for expressing time or some division of it, and it is just as properly applied to a combination of words for that purpose, as to a modification of the simple verb. The use of it is entirely arbitrary. Locutus sum are not the less a tense, because two words are employed. It is the time and not the form of words used to express it, which stamps propriety on the denomination.

If we attempt to dispense with some of the English tenses, by analyzing them, and resolving them into their primary elements, that is, parsing the words composing them, each distinctly, we shall meet with insuperable difficulties. Let a man attempt to make out the sense of this phrase, he had been writing, by analysing it. Had alone denotes held, possessed, as in the phrase, “he had an estate in New York.” Then in the phrase above, it will signify, he held or possessed been writing.

It is alleged that the auxiliary verbs are not secondary, but the most important verbs in the language. The point of importance must be determined by this fact, that by themselves they do not make complete sense; they leave the sense or affirmation imperfect. He may, he can, he will, he shall, are incomplete sentences, without another verb expressed or understood. They express nothing definite which is intended to be affirmed. When I ask, whether you can lend me a sum of money, and you reply, I can, the verb lend is understood. Not so with the verbs considered as principal. When I say, I write, I walk, the sense or affirmation is complete without the use of another verb. Hence it is with perfect propriety, that such verbs as can be used only in connection with others, should be considered as of a secondary character, and being used to aid in forming the tenses, they may very justly be denominated auxiliaries or auxiliaries.

Some of our verbs are used either as principal or as auxiliary, as have and will; and will takes a different and regular form when principal; I will, thou wilt, he will, or he wills an estate or a legacy; but when auxiliary, thou wilt, he will bequeath his estate.
Will, indeed, in its primary use, expresses volition, as when we say, “I will walk or ride; but as an auxiliary, it often loses this signification. When it is said, “it will rain to-morrow,” what relation has will to volition?

To show the utter futility of attempting to explain phrases by the primary signification of the auxiliaries, take the following example. May and might express power, liberty or possibility; have and had express holding or possession. On this plan of explanation, resolve the following sentence. “He might have had more prudence than to engage in speculation;” that is, he was able, or had power, to hold or possess, held or possessed more prudence than to engage in speculation.

So the following. “It may have rained on the land.” That is, it has power or is possible, to hold or possess, rained on the land.

All attempts to simplify our forms of the tenses by such resolution, must not only fail, but prove to be perfectly ridiculous. It is the combination of words only that admits of definition; and these must be exhibited as tenses; forms of expression presenting to the hearer or reader the precise time of action. This is necessary for our own citizens; but for foreigners, indispensable, as they want to know the tenses in English which correspond with the tenses in their own languages.

Nor shall we succeed much better in attempting to detect the primary elements of the terminations which form the variations of the simple verb. We may conjecture any thing; we may suppose loved to be a contraction of love-did; but in opposition to this, we find in our mother tongue, this termination ed, was od, or odc. Ic lufode, I loved; we lufodon, we loved. Besides, if I mistake not, this termination is the same as that in the early Roman laws, in which esto was written estod; and I believe we have no evidence that do and did ever belonged to the Latin language. But what settles this question, is, that did itself is formed of do and this same termination, do-ed. Here the question may rest.

We may conjecture that the personal terminations of the verbs were originally pronouns, and this conjecture is certainly better founded than many others; but we find in our mother tongue, the verb love, in the plural number, is written, we lufath, ge lufath, thi lufath, all the persons having the same termination; but certainly the same word was never used to express we, you or ye, and they.

I have attentively viewed these subjects, in all the lights which my opportunities have afforded, and I am convinced that the distribution of words, most generally received, is the best that can be formed, with some slight alterations adapted to the particular construction of the English language. Our language is rich in tenses, beyond any language in Europe; and I have endeavored to exhibit all the combinations of words forming them, in such a manner that students, natives or foreigners, may readily understand them.

I close with this single remark, that from all the observations I have been able to make, I am convinced the dictionaries and grammars which have been used in our seminaries of learning, for the last forty or fifty years, are so incorrect and imperfect, that they have introduced or sanctioned more errors than they have amended; in other words, had the people of England and of these States been left to learn the pronunciation and construction of their vernacular language solely by tradition, and the reading of good authors, the language would have been spoken and written with more purity than it has been and now is, by those who have learned to adjust their language by the rules which dictionaries and grammars prescribe.
The Grammar of a language is a collection of principles and rules, taken from the established usages of the nation using that language; in other words, an exhibition of the genuine structure of the language. These principles and rules are derived from the natural distinctions of words, or they are arbitrary, and depend for their authority wholly on custom. A rule is an established form of construction in a particular class of words. Thus it is a rule in English that the plural number of nouns is formed by adding s or es to the singular, as hand, hands; cage, cages; fish, fishes. An exception to a rule is, the deviation of a word from the common construction. Thus the regular plural of man would be mans; but the actual plural is men. This word then is an exception to the general rule of forming plural nouns.

A syllable is a simple sound, or a combination or succession of sounds uttered at one breath or impulse of the voice. A word consists of one syllable or of a combination of syllables. A sentence consists of a number of words, at the pleasure of the speaker or writer; but forming complete sense.

E NGLISH ALPHABET.

The English Alphabet consists of twenty six letters or characters, viz: A b C d E f G h i j k l m n o p q r s t u v w x y z.

There are many combinations of vowels in English words, in which one vowel is followed by another vowel. This sound, rendered vocal, becomes eh, for which we have no character. It is heard in fusion, pronounced fez-in.

The letters ng in combination have two sounds; one as in sing, singer; the other as in finger, longer. The latter requires a closer articulation of the palatal organs, than the former, but the distinction can be communicated only by the ear. The orthophets attempt to express it by writing gh after the ng, as fing-ger. But the peculiar sound of ng is expressed, if expressed at all, solely by the first syllable, as will be obvious to any person, who will write sing for singer; for let sing in this word be pronounced as it is by itself, sing, and the additional letter makes no difference, unless the speaker pauses at sing, and pronounces ger by itself.

Phonetics treats of the sounds of letters, or of words, whether simple or in combination; and teaches the true mode of writing words, according to established usage.

Ethyology treats of the derivation of words from their radicals or primitive forms, and of their various inflections and modifications to express person, number, case, sex, time and mode.

The articulations in English may all be thus expressed: ch, ed, et, er, em, en, ep, er, es, et, ev, ez, uth, aspirate and vocal, ezh, ezh, ing. These articulations may be named from the organs whose junctions they represent—Thus Labials, or letters of the lips, ch, ed, et, er, em, en, ep, er, es, et, ev, ez.

A diphthong is a union of two vowels or simple sounds uttered so rapidly and closely, as to form one syllable only, or what is considered as one syllable, as of and oh in voice and joy, or in sound, and one in voice.

A triphthong is a union of three vowels in one syllable; as in adeu.

There are many combinations of vowels in English words, in which one vowel only is sounded: as ai, ea, ie, ei, ou, au, ey, ey, &c. These may be called digraphs. They can be reduced to no rule of pronunciation.

The combinations au and ow have generally the sound of the broad a, as in fraud, and law. The combination ew has the sound of w long, as in new, Never, cere; and sometimes at the beginning of words the sound of yu, as in euchariat, euphony.

The letters ch and sh, at the beginning of a word, are pronounced as th, as in clear. Gl at the beginning of words are pronounced as dl, as in glory.

DIVISION OF SYLLABLES.

The first and principal rule in dividing syllables, is not to separate letters that belong to the same syllable, except in cases of anomalous pronunciation.
GRAMMAR OF THE

The best division of syllables is that which leads the learner most easily to a just pronunciation. Thus, hab-it, ham-let, bat-ter, ho-ly, lo-cal, en-gage, an-i-mal, al-i-ment, pol-i-cy, eb-o-ny, des-ig-nate, lam-ent-a-ble, pref-er-ab!e.

An exception to this rule occurs in such words as vicious, ambition, in which the et and it are pronounced like sh. In this case, it seems preferable to divide the words thus, vicious, amb-i-tion.

In dividing the syllables of derivative words it seems advisable to keep the original entire, unless when this is, or might be, already divided into meaningful portions. Thus ac-tor, hel-per, op-pres-sor, may be considered as a better division than ac-tor, hel-per, op-pres-sor. But it may be eligible in many cases, to deviate from this rule. Thus op-pres-sion seems to be more convenient both for children in learning and for printers, than op-pres-s-ion.

RULES FOR SPELLING.

1. Verbs of one syllable, ending with a single consonant preceded by a short vowel, and verbs of more syllables than one, ending with an accented consonant preceded by a short vowel, double the final consonant in the participle, and when any syllable is added beginning with a vowel. Thus, Abet, Sin, Permut, Abetted, Smirned, Abetting, Sinner, Abetor.

2. When the final consonant is preceded by a long vowel, the consonant is usually not doubled. Thus, Seal, Repeal, Defeat, Sealed, Repealed, Defeated, Sealing, Repealing, Defeating, Sealer, Repealer, Defeater.

3. When the accent falls on any syllable except the last, the final consonant of the verb is not to be doubled in the derivatives. Thus, Bias, Quarel, Worship, Biased, Quarelled, Worshiped, Biasing, Quarrelling, Worshiping, Biaser, Quarlerder, Worshiper, Equaler.

The same rule is generally to be observed in nouns, as in jeweler, from jewel.

These are general rules; though possibly special reasons may, in some instances, justify exceptions.

CLASSIFICATION OF WORDS.

Words are classified according to their uses. Writers on grammar are not perfectly agreed in the distribution of words into classes. But I shall, with one exception, follow the common distribution. Words then may be distributed into eight classes or parts of speech. 1. The name or noun. 2. The pronoun or substitutive. 3. The adjective, attribute or attributive. 4. The verb. 5. The adverb. 6. The preposition. 7. The connective or conjunction. 8. The exclamation or interjection.

The participles exhibit a distinct part of speech; it is a derivativeness from the verb, and partakes of its nature, expressing motion or action. But it sometimes loses its verbal character, and becomes a mere adjectival, expressing quality or habit, rather than action.

Names or Nouns.

A name or noun is that by which a thing is called; and it expresses the idea of which the thing is the subject. Thus, a material substance, as man, horse, tree, table—of immortal things, as faith, hope, love. These and similar words are, by customary use, made the names of things which exist, or the symbols of ideas, which they express without the help of any other word.

Division of Names.

Names are of two kinds: common, or those which represent the idea of a whole kind or species; and proper or appropriate, which denote individuals. Thus animal is a name common to all beings, having organized bodies and endowed with life, digestion, and spontaneous motion. Plant and vegetable are names of all beings which have organized bodies and life, with vital motion or vegetative life. Flower is a name common to all those plants which have blossoms. But it may be eligible in many cases, to deviate from this rule. Thus opression seems to be more convenient both for children in learning and for printers, than opression.

Note.—When the sense of words is sufficiently certain, by the construction of the sentence, the definitive may be omitted; as, "Duty to your majesty, and regard for the preservation of ourselves and our posterity, require us to entreat your royal attention." It is also omitted before names whose signification is general, and requires no limitation; as, "Solomon built a temple." "The Lord God planted a garden eastward in Eden." London is a great commercial city. A decisive battle was fought at Marengo. The English obtained a signal naval victory at the mouth of the Nile.

Rule III.—The definitive is used before names which are definite and as specific as possible: as, "Solomon built a temple." "The Lord God planted a garden eastward in Eden." London is a great commercial city. A decisive battle was fought at Marengo. The English obtained a signal naval victory at the mouth of the Nile.

Rule IV.—The definitive is used before names which are definite and as specific as possible: as, "Solomon built a temple." "The Lord God planted a garden eastward in Eden." London is a great commercial city. A decisive battle was fought at Marengo. The English obtained a signal naval victory at the mouth of the Nile.

Rule V.—The definitive is used before names which are definite and as specific as possible: as, "Solomon built a temple." "The Lord God planted a garden eastward in Eden." The singular denotes an individual, or a collection of individuals united in a plural.  

1. When the singular is in a regular plural, the singular is formed by adding s to the singular, as, "Sister! I coalesce with the i  

2. When the letter s does not combine in sound with the word or last syllable of it, the addition of s increases the number of syllables; as, houses, houses; grace, icaces: pages, pages; rose, roses; voice, voices; name, names.

3. When the name-ending is th, sh, or ch with its English sound, the plural is formed by adding es to the singular, for a single s after those letters cannot be pronounced; as, fox, foxes; glass, glasses; church, churches. But after ch with its Greek sound, like k, the plural is formed by only; as, monarch, monarchies.

4. When a name ends with y after a consonant, the plural is formed by dropping y and adding ies; as, vanity, vanities.  

RULE 1. When the terminating letter of a noun will admit the sound of s to convey the name or the last syllable of it, s only is added to form the plural, as, sea, seas; hand, hands; pen, pens; grape, grapes; vase, vases; vow, vows.

Rule 2. After ay, ey, and oy, s only is added; as, delay, delays; valley, valleys.

Note.—A few English nouns deviate from the foregoing rule; but the following is the formation of the plural number:

Class 1.—In some names, f in the singular, is for the convenience of utterance, changed into v; as, life, lives; knife, knives; door, doors; leaf, leaves; call, calls; calf, calves; self, selves; sheep, sheaves; shelf, shelves; wolf, wolves; thief, thieves; calyces, calyces.

Class 2.—The second class consists of words which are used in both numbers, with plurals irregularly formed; as, child, children; foot, feet; man, men; ox, oxen; house, houses; goose, geese; bean, beans; thesis, theses; emphasis, emphases; antithesis, antitheses; worthy, worthies.

Other words of this class, though ending in s, are used either wholly in the singular number, or in the one or the other, at the pleasure of the writer. Amend, alms, belows, bells, galls, gallow, odds, means, pains, news, riches.

Of these, pains, riches, and wages, are more usually considered as plural—wages is always singular—odds and means are either singular or plural—the others are more strictly singular; for measles is the name of a disease, and in strictness, no more plural than gout or fever. Small pox, for pocks, is sometimes considered as a plural, but it ought to be used as singular.

Billiards has the sense of game, containing unity of idea; and ethics, physics and other similar names, comprehending each the whole system of a particular science, do not convey the ideas of parts or particular branches, but of a whole collectively, a unity, and hence seem to be treated as words belonging to the singular number.

Note—Mine, thine, his, hers, yours, and theirs, are usually considered as the possessive case. But the three first are either attributes, and used with nouns, or they are substitutes. The three last are always substitutes, used in the place of names which are understood, as may be seen in the next page.

Its and whose have a better claim to be considered as a possessive case; but as they equally well fall under the denomination of attributes, I have, for the sake of uniformity, assigned them a place with that part of speech.

That mine, thine, his, yours, theirs, do not constitute a possessive case, is demonstrable; for they are constantly used as the nominatives of verbs and as the objectives after verbs and prepositions, as in the following passages. "Whether it could perform its operations of thinking and memory, out of a body organized as ours is,"—Locke, b. 2, 27. "In referring our ideas of other such cases to the same name, ours may be false,"—Ibid., 39, 10. "It is for no other reason but that his agrees not with our ideas."—ibid., ch. 3, 9 and 10.

You may imagine what kind of faith theirs was."—Amb. 3, 9. "The day is thine, O Lord, is the greatness, the power and the glory."—1 Ch. xxix. 11.

You and we are always substitutes for persons, and never for things or substances. Whose is equally applicable to persons as to things.

Whoever is often employed as the nominative to two verbs; as, "Whoever expects to find in the scriptures a specific direction for every moral doubt that arises, looks for more than he will meet with."—Paley, Phil. ch. 4.

Note.—Mine, thine, his and her are equally well used as substitutes, or as attributes. "The silver is mine, and the gold is mine,"—Hag. ii. 8. "The day is thine, O Lord, is the greatness, the power and the glory."—Ps. xxxiv. 19. "The day is thine, O Lord, is the greatness, the power and the glory."—1 Ch. xxix. 11.

These words are also used as attributes of possession; as, "Let not mine enemies triumph,"—Ps. xiv. 2. "So let thine enemies perish,"—Ps. lxxviii. 16. "Thine, O Lord, is the greatness, the power and the glory."—Ps. xxvii. 11.

There is another class of substitutes, which supply the place of names, attributes, sentences or parts of a sentence.

In the following sentence, it is the substitute for a name. "The sun rules the day; it illumines the earth." Here it is used for sun, to prevent a repetition of the word.

In the following passage, it has a different use. "The Jews, it is well known, were at this time under the dominion of the Romans."—Porteus, Lect. 5. Here it represents the whole of the sentence, except the clause in which it stands. To understand this, let the order of the words be varied.

The Jews were at this time under the dominion of the Romans, it [all that] is well known.

If a testimony is as glorious to his memory, as it is singular, and almost unexampled in his circumstances, that he loved the Jewish nation, and that he gave a very decisive proof of it, by building them a synagogue. It then is a substitute for those clauses of the sentence. The second it refers to the same clauses. In the latter part of the sentence, he gave a decisive proof of it—of what? of what is related in a preceding clause—He loved the Jewish nation—that he gave a decisive and magnificent proof. Here it represents that member of the sentence.

As for the pulling of them down, if the affairs require it."—Bacon on Ambition. Require what? The pulling of them down—"for which part of the sentence, it is a substitute.

And how could he do this so effectually, as by performing works, which it utterly exceeded all the strength and ability of men to accomplish."—Porteus, Lect. 5.

What utterly exceeded? To what does it refer? Let us invert the order of the words—"as by performing works to accomplish which exceeded all the strength of men." Here we find to accomplish, a verb in the infinitive, is the nominative to exceeded, and for that verb, it is a substitute.

This inceptive use of it forms a remarkable idiom of our language, and is much more peculiar than what it stands as the substitute for a subsequent member or clause of a sentence; and is a sort of pioneer to smooth the way for the verb. Thuc. "It is remarkable, that the philosopher Seneca makes use of the same argument."—Porteus, Lect. 6. If we ask, what is this? What is the argument? The answer must be, the fact stated in the last clause of the sentence. That this is the real construction, appears from a transposition of the clauses. "The philosopher Seneca makes use of the same argument, that is remarkable." In this order we observe the true use of that, which

But it must be observed, that although it and who are real substitutes, never united to names, like attributes—it day—who yet its and whose cannot be resolved from a noun expressed or implied—as, its shape, whose face—whose work—are they? that is, whose works. These are therefore real adjectives.

In the use of substitutes, it is to be remarked, that I, thou, you, and we, are employed in two distinct senses. Where the name of the person are both employed, as they are in formal writings, oaths and the like, the pronouns precede the name; as, "I, Richard Roe, of Boston." In similar language, you and we also precede the name; as, "You, John Roe, of New-York."—We, Richard Roe and John Doe, of Philadelphia.

You is used by writers very indefinitely, as a substitute for any person who may read the work—the mind of the writer imagining a person addressed by the writer.

"He and they are used in the same indefinite manner; as, "He seldom lives frugally, who lives by chance." "Blessed are they that mourn, for they shall be comforted."—Lusted, B. 2.

Bolingbroke, Let. to Winham. "The reason is that his subject is generally things; theirs, on the contrary, is persons."

"Yours of the 20th Oct. I have received, as Camp. Rhet. b. 1. ch. 19. Wycherley to Pope.

"These return so much better out of your hands than they went from mine."—Bacon, Unity in Religion.

"You and I are kin."—Shakespeare, You may imagine what kind of faith theirs was."—Amb. 3, 9.
is also a substitute for the preceding clause of the sentence, and it becomes redundant. The use then of the inceptive it appears to be to enable us to begin a sentence, without placing a verb as the introductory word; and by the use of it as a substitute for subjunctive members of the sentence, the order is inverted without occasioning obscurity.

It is to be noticed also that this neuter substitute, it, is equally proper to begin sentences, when the name of a person is afterwards used; as, "It was John that I spoke of," or "It was I that was spoken of."]

But if we transpose the words, and place who or that, the substitute which has been used next after the inceptive word, we must use he for the inceptive—"He, who had exhibited such powers of eloquence, was John."

In inceptive sentences, the order of words is changed, and it follows the verb. Who is it that has been thus eloquent?

There is a sentence in Locke, in which the inceptive it is omitted. "Whereby comes to pass, that, as long as any unceasing remains in the mind, B. ch. 21. In strictness, this is not a defective sentence, for that may be to understand it as

part of a sentence; as, "They that are whole need not a physician, but they that are sick." There is always an inceptive it in the last sentence, which has been used next after the last named, or nearest in the order of construction; that and those to the most distant; as,

"Twas war no more, but carnage through the field,

Those lift their sword, and those their booms yield."

Hooke’s Tasso. b. 20.

"Nor less the rest, the intrepid chief retires;

These urged by threats, and those by force constrain’d;"

Bacon.

There is a peculiarity in the use of that; for when it is an attribute, it is always in the singular number; but as a substitute for persons or things, it is used in the plural, and in some cases, for persons as well as things more frequently than any word in the language; as, "I knew a man that had it for a by-word, when he saw men hasten to a conclusion, ‘Stay a little that we may make an end the sooner.’"

Boron on Dispatch.

"Here that is the representative of man, and it stands for the last clause of the sentence or by-word."

"Let states that aim at greatness take heed how their nobility and genius multiply too fast." Bacon.

Here that is a substitute for a plural name. So also in the following,

"That which are whole need not a physician, but they that are sick."

"That they had eaten were about four thousand"—"that they are in the flesh"—they must be taken; it is the inceptive who.

"Let the princes measure the danger of discontent by this, whether they be just or unjust: for they were to imagine people to be reasonable, who do often spurn at their own good; nor yet by this, whether the griefs whereupon they rise be in great or small part to the fault of their kings."

Bacon on Kingdoms.

"Here this, in each part of the sentence, is the representative of the clause in Ita ics succeeding."

"Can we suppose that all the united powers of hell are able to work such astonishing miracles, as were wrought for the confirmation of the christian religion? Can we suppose that they can control the laws of nature at pleasure, and that with an air of sovereignty, and professing themselves the lords of the universe, as we know Christ did? If we can believe this, then we deny, &c. We observe here, this represents a series of sentences.

In some cases, this represents a few words only in a preceding sentence, as in the following—"The rule laid down is in general certain, that the king only can convocate a parliament. And this, by the ancient statutes of the realm, he is bound to do, every year or diencr, if need be."

If we ask, what is the king bound to do? The answer must be, convocate a parliament; for which words alone this is the substitute, and governed by do.

The plurals, these and those, are rarely or never used as substitutes for sentences.

Such is the true construction of sentences—the definitive that, instead of being a conjunction, is the representative of a sentence or distinct clause, preceding that clause, and pointing the mind to it, as the subject which follows. And it is definite or demonstrative in this application to sentences, as it is applied to a name or noun, as if there can be only one way shown, how men may come to that universal agreement, in the things they do consent in, which I presume may be done." Locke on Und. b. 1. 2.

Which is also a substitute for a sentence, or part of a sentence, as when used for a single word; as, "if there can be any other way shown, how men may come to that universal agreement, in the things they do consent in, which I presume may be done."
ENGLISH LANGUAGE.

Which, in this passage, represents all which precedes or which all that is above related, may be done.

"Another reason that makes me doubt of any innate practical principles, is, that I think there cannot any one moral rule be discovered, nor any just demand a reason which would be perfectly ridiculous and absurd, if, were it innate, or so much as self-evident, every innate principle must needs be."—Im. Chap. 3.

In this passage, the first which represents the next preceding part of the sentence, a noun may demand a reason; which power of demanding reason would be ridiculous. The second which is a substitute for self-evident; which, that is, self-evident, every principle must be.

Judas declared him innocent, which he could not be, had he, in any respect, deceived the disciples."—Porto, Lec. 2. Here which represents the attribute innocent.

That would equally well represent the same word, with a connective.

"Judas declared him innocent, and that he could not be," &c.; &c.; &c.

We shall find the reason of it to be the end of language, being to communicate thoughts—that is, end of language, and for those words, is which the substitute.

What.

This substitute has several uses. First, it has the sense of that which; as, "I have heard what has been alleged." Second,—What stands for any indefinite idea; as, "He cares not what he says or does."—"We shall the better know what to undertake."—Locke on Und. 1. 6.

Thirdly,—What is an attribute, either in the singular or plural number, and denotes something uncertain or indeterminate; as, "In what character, Butler was admitted into that lady's service, is unknown."—John. Life of Butler.

"It is not material what names are assigned to them."—Camp. Rhet. 1. 1.

"I know not what impressions time may have made upon your person."—M.ckle. I. i. M.'s. Here which represents the next preceding part of the sentence.

"To see what are the causes of wrong judgment."—Locke 2. 21.

"What time the sun withdrew his cheerful light, and the sable caverns of the night."—Hoole's Tasso. b. 7.

That is, at the time when or in which.

"By what is to be asked questions; as, "What will be the consequence of the revolution in France?"—Locke 2. 8. Here what contains the object after in and the nominative to goes.

"What is used with a name as an attribute and a substitute; as, "It was agreed that what goods were aboard his vessels, should be landed."—Mickle's Discovery of India. 89. Here what goods, are equivalent to the goods which, for what goods include the nominative to two verbs, were and should be landed. This use of the word is not deemed elegant.

As.

As, primarily signifies like, similar; the primary sense of which is even, equal, or the same as; as, their prices, as good as great, as great as their price; the sense of which is like or equally good, great or probable. Hence it frequently follows such. "Send him such books as will please him." But in this similar phrases, must be considered as the nominative to will please, or we must suppose an elliptis of several words. "Send him such books as the books which will please him, or as those which will please him." So in the following sentences.

"We have been accustomed to repose on its veracity with such humble confidence as suppresses curiosity."—Johnson's Life of Cowley.

"All the punishments which God is concerned to see inflicted on sin is only such as answer the ends of government."—Johnson's Life of Cowley.

"Many wise men contented themselves with such probable conclusions as were sufficient for the practical purposes of life."—Eefield, Hist. Phil. 2. 11.

"The malcontents made such demands as none but a tyrant could yield."—Bolingbroke on Hist. Let. 7.

In the last example, if as is to be considered as a pronoun, or substitute, it is in the objective case.

These and similar phrases are anomalous; and we can resolve them only by supplying the ellipsis, or by considering as in the nature of a pronoun, and the nominative to the verb.

In the following case of expression, we may supply it for the nominative.

"Do everything as was said about mercury and sulphur."—Eury.

"As it was said."—Eury.

"In poetry, as supplies the place of such."—Eury.

It is from which might contest sprung and mutual rage. As would the camp in civil broils engage."—Hoole's Tasso.

In prose we would say, "such contest and rage as."—As sometimes refers to a sentence or member of a sentence, and sometimes its place may be supplied by which. "On his return to Egypt, as I learned from the same authority, he levied a mighty army."—Below, Herod.

"Which I learned. On his return to Egypt, he levied a mighty army, which [last] I learned from the same authority."—As often begins a sentence. "As to the three orders of pronouns already mentioned, they may be called prepositive, as may indeed all substantives."—Harris. That is, concerning, respecting the three orders, or to explain that which respects the three orders, &c.

Both.

"Both is an adjective, but it is also a number for names, sentences, parts of sentences, and for attributes."—Lker. p. 119.

"Abraham took shec, and gave them unto Abimelech, and both of them made a covenant."—Gen. xxxi. 27.

Here both is the representative of Abraham and Abimelech.

"He will not hear the loss of his rank, because he can be the loss of his estate; but he will hear both, because he is prepared for both."—Boling. on Ercil.

In the last example, both represents the parts of the sentences in italics. When it represents two attributes, it may and usually does precede them; as, "He endeavoured to render commerce both advantageous and infamous."—Micklep. p. 139.

"As an attribute, it has a like position before names; as, 'Tousa confessed he had saved both his life and his honor."—Im. 169.

"It is both more accurate, and proves no inconsiderable aid to the right understanding of things, to discriminate by different signs such as are truly different."—Campbell's Rhet. 1. 33.

In this passage, both represents more accurate, and the following member of the sentence; but the construction is harsh.

"Abraham, in this necessity which is under of suiting himself to his audience, both that he may be understood by them, and that his words may have an influence upon them."—Camp. Rhet. ch. 10.

Here both represents the two following clauses of the sentence. The construction is placed between both and its noun; as, "To both the preceding kings, the term borotque is applied."—Camp. Rhet. 1. 2.

Same.

The attribute same is often used as a substitute for persons and sentences or parts of a sentence; as, "Nothing appears so clearly an object of the mind or intellect only, as the future does, since we can find no place for its existence anywhere else." Not but the same, if we consider, is truly of the past.

In this ill constructed sentence, same has reference to all which is preceding the future tense—that is, that it is an object of intellect only, since we can find no place for its existence anywhere else. The same, all this, is true of the past also.

"For brave and generous ever are the same."—Lusit. 1.

Many, few, all, any.

These words we often find used as substitutes for names. "For many shall come in my name, saying, I am Christ, and shall deceive many."—Matt. xxiv. 5. "Many are called, but few chosen."—xx. 16. "All that come to me, I will receive, and will not cast out."—v. 23. "As it is, so it will be in the heaven; and that is the ten shall be under heaven seven days."—Acts xviii. 14. "If a soul shall sin against any of the commandments."—Lev. xxiv. 2. "Neither is there any, that can deliver out of my hand."—1 Pet. xxxii. 39.

First, last, former, latter, less, least, more, most, are often used as substitutes.

"The victor's laurel, as the martyr's crown, is the first hope, nor less the last I prize."—Hoole's Tasso. 6. 8

"The last shall be first, and the first last."—Matt. xx. 16.

"It will not be amiss to inquire into the cause of this strange phenomenon; that, even a man of discernment should write without meaning, and not be sensible that he hath no meaning; and that judicious people should read what hath been written in this way, and not discover the defect. Both are surprising, but the first much more than the last."—Comp. Rhet. 2. 7.

Here both represents the two clauses of the sentence, preceded by that—both of those prepositions are surprising. First and last stand in the place of the same clauses.

"Sensibility and vehemence are often confounded, the latter being considered as a species of the former."—Camp. Rhet. 1. 11.

"He refused to go forth with less than the appointed equipment."—Mickle. 1. 181. Here less supplies the place of equipment, and prevents the necessity of its repetition.

"To the relief of these, Noronha sent some supplies, but while he was preparing to send more, an order from Portugal arrived."—Mickle. 1. 180. Here more is sufficiently intelligible without a repetition of the name—supplies.

Self is never added to his, her, their, their own, but may be placed immediately after the personal substitute, as he himself wrote a letter to the minister, or immediately after the following verb or its object, as he wrote a letter to the minister himself. In such phrases himself not only gives emphasis to the affirmative, but gives to an implied negative, the force of one expressed. "He went himself to the minister," carries with it a direct negation that another person went. In negative sentences, it has a different effect. "He did not write the letter himself," implies strongly that he wrote it by an agent, or had an agency in procuring it to be written. These compound substitutes are used after verbs when reciprocal action is expressed; as, "They injure themselves.

"This is an invention of his own." — Prov. xxvii. 2.

"This is an attribute, denoting originally one thing severed from others." — Camp. Rhet. ch. 5.

Self is said to have been originally an attribute, but is now used as an intensive word to give emphasis to substitutes and attributes. Sometimes it is used as a noun. In the plural, it forms selves. It is added to the substitutes my, your, own, as myself, yourselves; and to him, her, them, as himself, herself, themselves. And though annexed to substitutes in the objective case, these words are indifferently in the nominative or objective. Self is never added to his, her, their, their own, but may be placed immediately after the personal substitute, as "he himself" wrote a letter to the minister, or immediately after the following verb or its object, as "He wrote a letter to the minister himself." In such phrases, himself not only gives emphasis to the affirmative, but gives to an implied negative, the force of one expressed. "He went himself to the minister," carries with it a direct negation that another person went. In negative sentences, it has a different effect. "He did not write the letter himself," implies strongly that he wrote it by an agent, or had an agency in procuring it to be written. These compound substitutes are used after verbs when reciprocal action is expressed; as, "They injure themselves.

"This is an invention of his own.” — Prov. xxvii. 2.

One is a distributive attribute, used to denote every individual of a number, whether considered separately, as, "The king of Israel and the king of Judah sat each on his throne." — Matt. vii. 24. "Thou also and Aaron, take each of you of the censer." — Exod. xxvii. 2. "I cannot go beyond the word of the Lord, my God, to do less or more." — Exod. xvi. 17. It is used in the plural as well as the singular number.

"Owen is sometimes a substitute; as, "He came unto his own and his own received him not." — John i. 11.

Every denotes all the individuals of a number considered separately. It is a distributive attribute, but sometimes a substitute, chiefly in the law style; as, "Every of the clauses and conditions." — Lev. xxvi. 6. It is generally followed by the name to which it belongs, or by the cardinal number one.

"Neither and nor are usually classed with the conjunctions; but in strictness, they are always attributes or substitutes. Their correlative or and and, though considered as conjunctions, belong to the latter class of words; or being merely an abbreviation of other, and nor being the same word with the Saxon negative prefixed, as will be hereafter shown.

"Either and or are therefore signs of an alternative, and may be called alternatives. Either is also used also for each; as, "Two thieves were crucified—on either side one." — John xx. 18. This use of the word is constantly condemned by critics, and is constantly repeated by good writers; but it was the true original sense of the word, as appears by every Saxon author.

"Neither is not either, from the Saxon ne-either; and nor is ne-other, not other. As either or and present an alternative of two things, so neither and nor deny both or the whole of any number of particulars; as, "Neither office is filled, but neither of the offices will suit the candidate." — Lev. xii. 1.

Self is said to have been originally an attribute, but is now used as an intensive word to give emphasis to substitutes and attributes. Sometimes it is used as a noun. In the plural, it forms selves. It is added to the substitutes my, your, own, as myself, yourselves; and to him, her, them, as himself, herself, themselves. And though annexed to substitutes in the objective case, these words are indifferently in the nominative or objective. Self is never added to his, her, their, their own, but may be placed immediately after the personal substitute, as "he himself" wrote a letter to the minister, or immediately after the following verb or its object, as "He wrote a letter to the minister himself." In such phrases, himself not only gives emphasis to the affirmative, but gives to an implied negative, the force of one expressed. "He went himself to the minister," carries with it a direct negation that another person went. In negative sentences, it has a different effect. "He did not write the letter himself," implies strongly that he wrote it by an agent, or had an agency in procuring it to be written. These compound substitutes are used after verbs when reciprocal action is expressed; as, "They injure themselves.

"This is an invention of his own.” — Prov. xxvii. 2.

The attribute the one or the other is a substitute; as, "One and another, a distributive attribute, but sometimes a substitute, chiefly in the law style; as, "every of the clauses and conditions." — Lev. xxvi. 6. It is generally followed by the name to which it belongs, or by the cardinal number one.

"Either and or are therefore signs of an alternative, and may be called alternatives.

"Either is also a substitute for a name; as, "Either of the roads is good." It represents a sentence or a clause of a sentence; as, "No man can serve two masters, for either, he will hate the one and love the other; other else he will hold to the one and despise the other." — Matt. xvi. 24. To understand the true import of either, let or be also reduced back to its original orthography, "for either, he will hate the one and love the other; other else he will hold to the one and despise the other. Here we are presented with the sentence as it would have stood had the words been used in the true signification of "either." — White.
ENGLISH LANGUAGE.

be used as a substitute; as, "The rich have many friends"—"Associate with the wise and good"—"The future will resemble the past"—"Such is the opinion of the learned."

Attributes or Adjectives.

Attributes or Adjectives, in grammar, are words which denote the qualities inherent in, or ascribed to things; as, a bright sun; a splendid equipage; a miserable hut; a magnificent house; an honest man; an amiable woman; liberal charity; false honor; a quiet conscience.

As qualities may exist in different degrees, which may be compared with each other, suitable modes of speech are devised to express these comparative degrees. In English, most adjectives admit of three degrees of comparison, and a few admit of four. There are therefore four degrees of comparison.

The first denotes the slightest or least degree of the quality, and is expressed by the termination -est or -est, and being not modified.

The second denotes such a degree of the attribute as to constitute an absolute or distinct quality; as, red, brown, great, small, brave, wise. This is called the positive degree.

The fourth denotes the least degree of a quality than exists in another object, with which it is compared; as, greater, smaller, braver, wiser. This is called the comparative degree.

The third denotes a greater or less degree of a quality than exists in another object, with which it is compared; as greater, smaller, braver, wiser. This is called the comparative degree.

The fourth degree is formed by adding -est to an attribute, as yellowest. Yellowishness may be thus expressed.

The comparative degree is formed by adding -er to adjectives ending with e, as, white, whiter; and by adding more or less to words ending with an articulation, as, cold, colder; or by prefixing more or less, as, more just, less noble.

The superlative degree is formed by adding -est to adjectives ending with e, as, wise, wiser; and est to those which end with an articulation, as, cold, coldest; or by adding most and least, as, most brave, least charitable.

Every attribute, susceptible of comparison, may be compared by more and least, and least.

All monosyllables admit of er and est, and dissyllables when the addition is not pronounced, may be easily pronounced; as, happy, happier, happiest; lofty, loftier, loftiest.

But few words of more syllables than one will admit of er and est. Hence, if the attribute ends in e, this vowel is omitted; as, white, whitish.

This may be denomina-

2d. To command, exhort or invite: as, go, attend, let us observe.

3d. To pray, request, entreat: as, O may the spirit of grace dwell in us.

4th. To inquire, or question; as, does it rain? Will he come?

From the various uses and significations of verbs, have originated several divisions of the class. The only one in English which seems to be correct and sufficiently comprehensive, is, into transitive and intransitive. To these may be added a combination of the verb be, with certain auxiliaries and participles, which is called a passive verb.

1. A transitive verb denotes action or energy, which is exerted upon some object, or in producing some effect. In natural construction, the word expressing the object, follows the verb, without the intervention of any other word, though the order may be sometimes varied. Thus, "ridicule provokes anger," is a complete proposition; ridicule is the agent or nominative word, which causes the action; provoke is the verb, or affirmation of an action; anger is the object or effect produced, following the transitive verb provoke.

2. An intransitive verb denotes simple being or existence in a certain state, as to be, to rest; or it denotes action, which is limited to the subject. Thus, "John sleeps," is an affirmation, in which John, the nominative, or subject, is the subject of the affirmation; sleeps is a verb intransitive, affirming a particular thing of John, which extends to no other object.

3. The passive verb in English is formed by adding certain auxiliaries and participles to the verb to be. It denotes passion or suffering; that is, that the subject of the affirmative or nominative is affected by the action affirmed; as, "John is convinced of a lie," is a complete proposition; convinced is the agent or nominative, affecting the subject of the affirmative, which is John.

To correspond with their nominatives, verbs are used in both numbers, and with the three persons in each.

As action and being may be denominated as present, past and future, verbs have modifications to express time, which are called tenses. And as action and being may be represented in various ways, verbs have various modifications to answer these purposes, called modes or moods. Hence verbs bring forward, number, tense and mood.

The persons, which have been already explained, are I, thou or you, he, she, it, in the singular number; in the plural, we, ye or you, they. The numbers have been before explained.

Tenses.

There are six tenses or modifications of the verb to express time. Each of these is divided into two forms, for the purpose of distinguishing the definite or precise time from the indefinite. These may be thus explained and exemplified.

Present Tense, indefinite.

This form of the present tense affirms or denies action or being, in present time, without limiting it with exactness to a given point. It expresses also facts which exist generally, at all times, general truths, attributes which are permanent, habits, customs, and the like, without reference to personal classes or individuals, or a specific time; as, God is infinitely great and just; man is imperfect and wretched; plants spring from the earth; birds fly; fishes swim.

Present Tense, definite.

This form expresses the present time with precision; usually denoting action or being which corresponds in time with another action; as, I am writing, while you are waiting.

Past Tense, indefinite.

This form of the past tense represents action which took place at a given time past, however distant and completely past; as, "In six days, God created the heavens and the earth," "Alexander conquered the Persians," "Scipio was as virtuous as brave." "The Earl of Chatham was an eloquent statesman."

Past Tense, definite, [imperfect]

This form represents an action as taking place and unfinished in some specified period of past time; as, "I was standing at the door when the procession passed."
Perfect Tense, indefinite.
This form of the perfect tense represents an action completely past, and often at no great distance, but the time not specified; as, “I have accomplished my design.” But if a particular time is named, the tense must be the past; as, “I accomplished my design last week.” “I have my friend last week,” is not correct English. In this respect, the French idiom is different from the English, for “J’ai vu mon ami hier” is good French, but “I have seen my friend yesterday” is not good English. The words must be translated, “I saw my friend yesterday.” No fault is more common than a mistranslation of this tense.

It is to be noted however that this perfect indefinite tense is that in which we express continued or repeated action; as, “My father has lived about eighty years.” The king has reigned more than forty years.” He has been frequently heard to haunt.” Life of Cooper. We use it also when a specified past time is represented, if that time is expressed as a part of the present period. Thus, although we cannot say, “We have been together at no great distance, but the time not specified; as, “I have accomplished my design last week.” “I have my friend last week,” is not correct English. In this respect, the French idiom is different from the English, for “J’ai vu mon ami hier” is good French, but “I have seen my friend yesterday” is not good English. The words must be translated, “I saw my friend yesterday.” No fault is more common than a mistranslation of this tense.

The future tense is formed by the present tense of shall and will; for, “I shall go,” he will go, are merely an appropriate use of I shall to go, I will to go. Such an application of these words under the head of auxiliaries.

We have another mode of expression, which does not strictly and positively assert an action, yet it implies a necessity of performing an act, and clearly indicates that it will take place. For example, “I have to pay a sum of money to morrow.” That is, I am under a present necessity or obligation to do a future act.

The substantive verb followed by a radical verb, forms another idiom expression of future time; as, “John is to command a regiment.” Emas writ in search of the seat of an empire which was, one day, to command the world.” The latter expression is a future past; that is, past to the narrator, but future as to the event, at the time specified.

3. It gives great life and effect to description, in prose or verse, to represent past events as present; to introduce them to the view of the reader or hearer, as having a present existence. Hence the frequent use of the present tense for the future, by the historian, the poet and the orator:

“Or any mode of expression, the mind is transported forward to the time, so as to conceive it present; as, “I cannot determine, till the mail arrives.”

Prior-Past Tense, indefinite, [pluperfect.]
This form of the prior past tense expresses an action which was past at or before some other past time specified; as, “he had received the news before the messenger arrived.”

Future Tense, indefinite.
This form represents an action as just finished; as, “I have been reading a history of the revolution in France.”

Prior-past, definite.
This form denotes an action to be just past, at or before another time specified; as, “I had been reading your letter when the messenger arrived.”

Future Tense, definite.
This form expresses an action which is to take place and be unfinished at a specified future time; as, “He will be preparing for a visit, at the time you arrive.”

Prior-Present, definite.
This form expresses an action which will be just past at a future specified time; as, “We shall have been making preparations, a week before our friends arrive.”

In the use of the present tense, the following things are to be noticed.
1. The present tense is customarily used to express future time, when by any mode of expression, the mind is transported forward to the time, so as to conceive it present; as, “I cannot determine, till the mail arrives.”

2. Another use of the verb is to affirm, assert or declare some action or existence, either positively, as he runs, or negatively, as you are not in health. This form is called the Indicative Mode.

3. Another use of verbs is to represent actions or events which are uncertain, conditional or contingent; as, if he shall go; if they would attend. This is called the Conditional Mode; but would better be denominated the Conditional. The Indicative and Potential become conditional, by means of certain words called auxiliaries, as may, can, must, &c. This form is called the Potential Mode; as, I may or can write; he must wait.

4. Another use of verbs is to represent actions or events which are uncertain, conditional or contingent; as, if he shall go; if they would attend. This is called the Subjunctive Mode, but would better be denominated the Conditional. Participles.
Participles are derivatives from verbs, formed by particular terminations, and having the sense of verbs, attributes or names. The verbs taring, turning, are taring, turning, or when the verb ends with e, by dropping that letter and adding iing, as place, placing. But e is

When a man expresses his own determination of mind, I will, we are ac-
customed to consider the event, or act willed as certain; for we naturally
connect the power to act, with the intention; hence we make the declara-
tion an act of profound of confidence, and by an easy association of ideas, we
connect the declaration, with an obligation to carry the determination into
effect. Hence will expressed by a person himself, came to denote a promise.

But when a person declares the will of another, he is not supposed to pos-
sess the power to decide, or to carry the determination into effect. Hence
will expressed by a person himself, came to denote a promise.

May conveys the idea of such or permission; as, "he may go, if he will." 

This participle often loses its verbal character, and becomes an attribute;  
and sometimes is used as an adjective, to denote the perfect tense; as, the 
burning of London in 1666." In this capacity, it takes the plural form as, 
the "overflows of the Nile;" "he seeth all his goings." And sometimes 
the plural is used when a modifier is attached to the participle; as, 
the "goings out, the coming in." Ezek. xiii. 11. But this use of the partici-
ple is not esteemed elegant, nor is it common.

In a few instances, the participle in -ing becomes a name by receiving 
the termination -ness; as, willingness, from willing.

The other species of participle is formed from the verb, by adding ed or ed, 
and in regular verbs, it corresponds exactly with the past tense; as, loved, 
preceded. This may be called the participle of the perfect tense.

This participle also becomes an adverb or modifier by receiving the 
term ly, as lovingly, laughingly; and this species of modifiers admits of 
comparison, as more lovingly, most charmingly.

as a concealed plot, a painted house. In this character it admits of compari-
nation, as more lovingly, most charmingly.

Do is also used in negative and interrogative sentences; the present
and past tenses of the Indicative Mode being chiefly formed by this auxiliary:
as, "I do not reside in Boston." "Does John hold a commission?"

Have is also a principal and transitive verb, denoting to possess; but much
used as an auxiliary, as "He has lately been to Hamburg." It is often used to 
supply the place of the principal verb, or participle, preventing a repetition 
of it, and the object after it; as, "I have not seen Paris, but my brother has;"
that is, "I have seen Paris." Equally common and extensive in the use of be, denoting existence, and

Participle of the Present Tense.- Having.

Conditional or Subjunctive Mode. The Conditional or Subjunctive Mode is the same as the Indicative, with some preceding words expressing condition, supposition or contingency. These words are, if, though or although, unless, except, whether, lest, albeit.

If is a corruption of gif, the imperative of gifan, the Saxon orthography of give. Though, the Saxon though, signifies permit, allow. Although is a compound of all and though, give or allow all. The old word tho, still used in some parts of England, is the imperative of the Saxon tho, to allow. Unless is the imperative of the Saxon unmay, to loose or dissolve. Except is the imperative of that verb. Lest is from lessan, to lease or dissolve. Albeit is a compound of all, be and it, let it be so.

These words, if, though, answer in signification and use to the following: admit, grant, allow, suppose, as signs of a condition or hypothesis. If you shall go, is simply, give, you shall go; that is, give that condition or fact; allow or suppose it to be so.

It has been, and is still customary for authors to use, though, as though, as if and as though, with second and third persons of the verb in the present tense, to form the subjunctive mode; if thou go, if he write.

The correct construction of the subjunctive mode is precisely the same as that of the indicative; as it is used in popular practice, which has preserved the true idiom of the language; if thou hast, if he or he hath; to denote present uncertainty. But a future contingency may be expressed by the omission of the personal terminations; if he go, that is, if he shall go.

Be is a verb denoting existence, and therefore called the substantive verb. It is very irregular, being derived from different radicals, and having undergone many dialectical changes.

In the subjunctive mode, there is a peculiarity in the tenses which should be noticed. When I say, if it rains, it is understood that I am uncertain of the fact; on the contrary, it is understood that I am certain, it does not rain at the time of speaking. Or if I say, if it did not rain, I would take a walk, I convey the idea that it does rain at the moment of speaking. This form of our tenses in the subjunctive mode has never been the subject of much notice, nor ever received its due explanation and arrangement. For this, the verbal verb is actually a present tense, or at least indefinite—certainly it does not belong to past time. It is further to be remarked, that a negative sentence always implies an affirmative. "It if did not rain," implies that it does rain. On the contrary, an affirmative sentence implies a negative. — "If it did rain," implies that it does not.

In the past time, a similar distinction exists; for example, "If he had not been loved," denotes uncertainty in the speaker's mind—but "if it had not rained yesterday," implies a certainty, that it did rain.

The potential mode becomes conditional by means of the modals, if, though, unless, &c. to the indicative, in its several tenses. With this exception, however, that in the future tense, the auxiliary may be and often is suppressed. Thus instead of If I shall or will love, we shall or will love. We shall or will love. Ye shall or will love. You shall or will love. They shall or will love.

It is usual to place after do, and contracted into don't.

The future is often elliptical, the auxiliary being omitted. Thus instead of If I shall be loved, &c. are used the following forms: 
ENGLISH LANGUAGE.

All verbs whose past tense and perfect participle do not end in ed are deemed irregular. The number of these is about one hundred and seventy seven. They are of three kinds.

1. Those whose present tense, and participle of the perfect are the same as the present; as, beat, burst, cast, cost, cut, hit, hurt, let, put, reach, rest, set, shed, shed, shout, slit, split, spread, thrust, twist, wet. Where sometimes is used.

2. Verbs whose past tense and participle are alike, but different from the present; as, meet, met; sell, sold.

3. Verbs whose present tense and participle are all different; as, know, knows, known.

A few English verbs have ch, ch, x, p, l, ess, though regular, suffer a contraction of ed into t; as, snatch, snatched, checked, checked, snapped, snapp, mixt for mixed, dealt for dwelt, past for passed. Others have a digraph shortened; as, dream, dreamt; feel, felt; mean, meant; sleep, slept; deal, dealt. In a few, e is changed into a, as become, became.

As some of the past tenses and participles are obsolete or obscenest, it is deemed proper to set these in separate columns for the information of the student.

Prior-future, indefinite.

Shall I have loved? Shall we have loved? Shall or will thou have loved? Shall or will ye have loved? Shall or will he have loved? Shall or will they have loved? Shall or will we have loved? Shall or will ye have loved? Shall or will thou have loved? Shall or will ye have loved? Shall or will he have loved? Shall or will they have loved?

The definite form of this tense is little used.

Will, in this tense, is not elegantly used in the first person.

The interrogative form is not used in the imperative mode; a command and a question being incompatible.

It is not necessary to exhibit this form of the verb in the potential mode. Let the learner be only instructed that in interrogative sentences, the nominative follows the verb when alone, or the first auxiliary when one or more are used; and the sign of negation not, (and generally never) immediately follows the nominative.

**Note 1.**—The old forms of the past tense, *sang, spoke, sprung, forgot,* &c., are here placed among the obsolete. That, in ordinary practice, whether popular or polite: and it seems advisable not to attempt to revive them. In addition to this reason for omitting them, there is one which is not generally understood. The sound of *a* in these and all other like cases, was originally the broad, *or o*; which sound, in the Gothic and Saxon, as in the modern Scotch, corresponded nearly with *o* in *spoke, swore.* *Spoke* is therefore nearer to the original than *spake,* as we now pronounce the vowel *a* with its first or long sound, as in *sake.*

**Note 2.**—In the use of the past tense and participles of some of these verbs, there is a diversity of practice; some authors retaining those which others have rejected as obsolete. Many words which were in use in the days of Shakspeare and Lord Bacon are now wholly laid aside; others are used only in books, while other, are obsolete, being occasionally used, and a few of the old participles, having lost the verbal character, are used only as adjectives. Of the last mentioned species, are *fraught, drunken, molten, behelden, thorn, clad, bownden, queen.* *Holpen* is entirely obsolete. *Holpen*, *gotten*, and *forgotten*, are nearly obsolete in common parlance. *Wrought* is evidently obsolete. *Stricken* is used only in one phrase, *stricken in age or years,* which we learn from the bible; but in every other case, is inelegant and pedantic.

Bishop Lowth has attempted to revive the use of many of the obsolete present and past participles, for which he had, and I think, deservedly, incurred the severe animadversions of eminent critics. "Is it not surprising," says Campbell on Rhetoric, b. 2, ch. 2, "that one of Lowth's penetration should think a single person entitled to revive a form of inflection in a particular word, which had been rejected by every good writer of every denomination, for more than a hundred and fifty years?" This writer declares that Lowth has advanced on the use of the past tense and participle, to be inconsistent with the very first principles of grammar. He observes truly that all authority for laying aside the participles ending with *en,* and for removing the differences between the past time and participle, is to obviate, in a degree, this inconvenience. This is recommended by another circumstance—it will so far reduce our irregular verbs, by analogy with the regular, whose past tense and participle of the perfect are alike.

Independent of authority however, there are substantial reasons in the language itself for laying aside the participles ending with *en,* and for removing the differences between the past time and participle, to the opinion of Lowth, who regrets that our language has so few inflections. "If it is not surprising," says Bishop Lowth, "that one of Lowth's penetration should think a single person entitled to revive a form of inflection in a particular word, which had been rejected by every good writer of every denomination, for more than a hundred and fifty years." This writer declares that Lowth has advanced on the use of the past tense and participle, to be inconsistent with the very first principles of grammar. He observes truly that all authority for laying aside the participles ending with *en,* and for removing the differences between the past time and participle, is to obviate, in a degree, this inconvenience. This is recommended by another circumstance—it will so far reduce our irregular verbs, by analogy with the regular, whose past tense and participle of the perfect are alike.

In a number of words, the dropping of *it* in the participle, will make a convenient distinction between the participle and the adjective; for in the latter, we always retain *en*—we always say, "a silver treasurse, a spoken language, a hidden mystery;—though the best authors write, a "mystery hid from ages;" "the language spoken in Bengal."

Besides, whenever we observe a tendency in a nation to contract words, we may be assured that the contraction is found to be convenient, and is therefore to be recommended. Indeed if I mistake not, we are indebted to such contractions for many real improvements; as "write from gewrite; slain from ofslagen; fastened from gefastnode; men from manman; holy from haligan, &c."

And as a general remark, we may be assured that no language ever suffers the loss of a use, or syllable. If a word or syllable is ever laid aside in national practice, it must be because it is not wanted, or because it is harsh and inconvenient in use, and a word or syllable more consonant to the general taste of a nation or state of society, is substituted.
ENGLISH LANGUAGE.

Such is the fact with our participles in en; the being suppressed in pronunciation, we have the words spoken, written, held, in actual practice. Nothing can be more weak, inefficient and disagreeable than this nasal sound of the half vowel n; it is disagreeable in prose, licelie in verse, and in music, more than in all other language. From this kind of defects, the language, the change would be desirable. At any rate, when people in general have laid aside any of these sounds, writers, who value the beauties of language, should be the last to revive them.

Defective Verbs.

Verbs which want the past time or participle, are deemed defective. Of the two, the last is worse. The auxiliary, do, can, will, shall, must, having no participle, belong to this class. Ought is used in the present and past tenses only, with the regular inflection of the second person only — / ought, thou owest, he ought. We, you, they ought. Ought is wholly obsolet, except in the infinitive, to introduce an explanation or enumeration of particulars; as, "There are seven persons, to wit, four men and three women." Wot and lest are entirely obsolete.

Adverbs or Modifiers.

Adverbs are a secondary part of speech. Their uses are to enlarge, restrict, limit, define, and in short, to modify the sense of other words. Adverbs may be classed according to their several uses.

1. Those which qualify the actions expressed by verbs and participles; as, "a good man lives piously;" a room is elegantly furnished. Here piously, elegantly denotes the manner of living; manner of being, elegantly denotes the manner of being furnished.

In this class may be ranked a number of other words, as when, soon, then, where, whence, hence, and many others, whose use is to modify verbs. In these uses, these words modify or change the sense of the verb, and when prefixed, are united with the verb in orthography.

A few modifers admit the terminations of comparison; as soon, sooner, soonest; often, oftener, oftenest. Most of those which end in ly, may be prefixed, as more, most, with, without, better, worst, across.

We have a number of particles, which serve to vary or modify the words to which they are prefixed, and which are sometimes called inseparable prepositions, because they are never useless, but as parts of other words. Such are a, be, con, mis, pre, re, sub, in, abside, become, conjoin, mistake, prefer, return, subsist, &c. These may be called prefixes.

Connectives or Conjunctions.

Connectives are words which unite sentences and conceptions in construction, joining two or more simple sentences into one compound one, and continuing the sentence at the pleasure of the writer or speaker. They also begin sentences after a full period, manifesting some relation between sentences in the general tenor of discourse.

The connectives of most general use, are and, or, either, nor, neither. To which may be added because, for, because, for in, since, for of, for in, let, to, whereas, or, or, or, for, and but, and but, and but, and but, and but, and but, and but.

We have a number of particles, which serve to vary or modify the words to which they are prefixed, and which are sometimes called inseparable prepositions, because they are never useless, but as parts of other words. Such are a, be, con, mis, pre, re, sub, in, abside, become, conjoin, mistake, prefer, return, subsist, &c. These may be called prefixes.

Their use is to express an alternative, and I shall call them alternatives. Thus, "Either John or Henry will be at the Exchange," is an alternative sentence; the verb or predicate belonging to one or the other, but not to both; and whatever may be the number of same or propositions thus united by or, or the relative of any of the particulars. Thus, "For I am persuaded that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor high, nor depth, nor any other creature shall be able to separate us from the love of God." Rom. viii. 38, 39. Here neither is used instead of for, and denotes the same idea, namely, that all, all of which it denies to be able to effect a certain purpose — not either of these which follow shall separate us from the love of God. It is laid down as a rule in our grammars, that nor must always answer to neither, but this is a great mistake, for the negation of neither, not either, extends to every one of the following.

In the latter sense, or that of buttom, it is used in this passage, "He hath not grieved me, but in part." 2 Cor. ii. 5. That is, "He hath not grieved me, except in part". The first assertion is a complete negation ; the word not signifies opposition, as is usually supposed, but some addition to the sense of the verb, and denoting sufficiency, compensation, more, further, or something additional, by way of amendment; and buttom or button, equivalent to without or except.

In the former sense, we have the word in this sentence; "John resides at York, but Thomas resides at Bristol." The primitive sense here is, John resides at York; more, add, supply, Thomas resides at Bristol. It does not signify opposition, as is usually supposed, but some addition to the sense of the verb.

In the latter sense, or that of buttom, it is used in this passage, "He hath not grieved me, but in part." 2 Cor. ii. 5. That is, "He hath not grieved me, except in part." The first assertion is a complete negation; the word not signifies opposition, as is usually supposed, but some addition to the sense of the verb.

The history of this word but should be, as Johnson expresses the idea, "a guide to reformers, and a terror to innovators." The first blunder or innovation blended two words of distinct meanings into one, in orthography and pronunciation. Then the sense and etymology being obscured, authors proceeded to a further change, and suppressed the negation, which was essential to the buttom. We have now therefore one word with three different and unalloyed meanings; and to these may be reduced the whole of Johnson’s eighteen definitions of but.

Let us however trace the mischief of this change a little further. As the word but is now used, a sentence may have the same meaning with or without the negation. For example: "he hath not grieved me, but in part," and "he hath grieved me, but in part," have, according to our present use of these sentences, precisely the same meaning, and precisely the same effect. To compare different passages of scripture, as they now stand in our bibles.

He hath not grieved me, but in part.

Our light affliction is for a moment.

This however is not all; for the assertion being directed neither by knowledge, nor judgment, is not extended to all cases, and in a large proportion of phrases to which but belongs, it is used in its original sense with a preceding negation, especially with nothing and none. I am no good, but one, that is God. Matt. xix. 17. This is correct—there is none good, except one, that is God. "He saw a fig-tree in the way, and found nothing thereon but leaves only." Matt. xxii. 19. This is also correct—"he found nothing, except leaves:" the only is redundant. "It amounts to no more but this." Locke, Und. b. 1. 2. This is a correct English phrase, and answers to nothing except this; but it is nearly obsolete.

Hence the propriety of these phrases. "They could not, but be known before." Locke, 1. 2. The reader may be, may cannot choose but be
very fallible in the understanding of it." Locke, 3. 9. Here but is used in its true sense. They could not, except this, be known before. That is, the contrary was not broad alone, but by every word which proceeded out of the mouth of God." Matt. iv. 4. Here the word but is expressed by the connective at all, but always by the following sentence or phrase. "They have mouths, but they speak not; eyes have they, but see not." Psalm exv. 5. Let but be omitted. "They have mouths, they speak not; eyes have they, they see not." The omission of the connectives makes not the smallest alteration in the sense, so far as opposition or difference of idea in the members of the sentence is concerned. Indeed the Bishop is most unfortunate in the example selected to illustrate his rule; for the copulative and may be used for but, without the least alteration in the sense—"You and I rode to London, and Peter staid at home." In this sentence the opposition is as completely expressed as if but was used; which proves that the opposition in the sense has no dependence on the connective. Nor is it true that an opposition in the sense always follows but. "Man shall not live by bread alone, but by every word which proceedeth out of the mouth of God." Matt. iv. 4. Here the last clause expresses no opposition, but merely an additional fact. The true sense of but when used for but, is supply, supply, further, something additional to complete the sense; it may be a matter of personal, historical, or historical; it is not, generally, however, the word but is appropriately used before a clause of a sentence, intended to introduce a new and somewhat different idea, by way of modifying the sense of the preceding clause. This use is very naturally deduced from the original sense of the word, something further which is to make complete or qualify what has preceded.

"Then is a connective of comparison; "John is taller than Peter." Because is a mere compound of by and cause—by cause. It is the case of some to contrive some false periods of business, for they may seem men of dispatch. Bacon on Dispatch. See also Apoth. 7. 6. This is a correct English idiom. Dr. Lowth's criticism to the contrary notwithstanding; but it is now obsolete.

Exclamations.

Exclamations are sounds uttered to express passions and emotions; usually those which are violent or sudden. They are called interjections, words thrown in between the parts of a sentence. But this is not always the case; and the name is insignificant. The more appropriate name is, exclamations; as mere irregular sounds, uttered as passion dictates and not subject to rules. A few of these sounds however become the customary modes of expressing particular passions and feelings in every nation. Thus in English, joy, surprise and grief are expressed by oh, uttered with a different tone and countenance. Alas expresses grief or great sorrow—pish, pshaw, express contempt. In this and similar cases, names and attributes are uttered by way of generalization or abbreviation, implied in the term. An exclamation in a detached manner; as, Hail! Welcome! Bless me! Gracious heavens!

In two or three instances, exclamations are followed by nouns and substantives in the nominative and objective; as, O thou, in the nominative; oh me, in the objective. Sometimes that follows O, expressing a wish; "O that the Lord would guide my ways." But in such cases, we may consider wish or some other verb to be understood.

Derivation.

However numerous may be the words in a language, the number of radical words is small. Most words are formed from others by addition of certain words or syllables, which were originally distinct words, but which have lost their distinct character, and are now used only in combination with other words. Thus er in lover, is a contraction of er, a Saxon word denoting man; [the Latin vir] used denotes state or condition; ly is an abbreviation of like or likewise; fy is from facio, to make, &c. A compound sentence consists of two or more simple sentences, joined by connectives. The divisions of a compound sentence may be called members or clauses.

Sentences are declaratory, as, I am writing, the wind blows—impersonal, as, go, retire, be quiet—interrogative, as, where am I? who art thou?—conditional, as, if he should arrive.

The rules for the due construction of sentences fall under three heads:

First, connect or agree—Neouad, government—Third, arrangement and punctuation.

In agreement, the name or noun is the controlling word; as it carries with it the verb, the substitute and the attribute. In government, the verb is
ENGLISH LANGUAGE.

Rule 1.—A verb must agree with its nominative in number and person.

Examples.

In solemn style. "Thou hast loved righteousness." Heb. i. 9. Commandment.

Thou shalt not steal." Exod. xx. 15. A young levitical tribe, having inherited a large estate from his father. His father harassed with competitions, and perplexed with a multiplicity of business, recommended the quiet of a private station. Let the question be asked, who inherited a large estate.

In familiar language. I write; John reads; Newton was the first of astronomers.

Note 1.—The nominative to a verb is found by young learners, by asking who, where, or what is referred to. "Every man was washed, but we are sanctified." I Cor. vi. 11. "A young man of great endowments, a young man of great endowments, inherited a large estate from his father. His father harassed with competitions, and perplexed with a multiplicity of business, recommended the quiet of a private station. Let the question be asked, who inherited a large estate.

The answer is: "All of those whom the king had given a card, who recommended the quiet of a private station! His father, which is therefore the nominative to the verb recommended."

Note 2.—Let the following rules be observed respecting the position of the nominative.

1. The nominative usually precedes the verb in declaratory phrases; as, "God created the world!" "The law is a rule of right!" But the nominative may be separated from its verb, by a member of a period; as, "Liberty, say the favorers of popular power, can only be found in democracy." Anarchists, ch. 62.

11. The nominative often follows an intransitive verb, for such a verb can have no object after it, and that position of the nominative creates no ambiguity; thus, "Above it stood the Seraphim!" Is. vi. "Gradual makes the figure complete.

111. When the verb is preceded by here, there, hence, hence, then, thus, yet, so, nor, neither, such, the same, herein, therein, where, and perhaps by some other words, the nominative may follow the verb, especially be, as, "Where there is no smoke, there was a man sent from God!" But such were the facts! "The same was the fact!" "Herein consists the excellence of the English government." Blackstone's Comm. 6. 1.

IV. When an emphatical attribute introduces a sentence, the nominative may follow the verb; as, "Give me the Lord, gracious!" his works, and his happiness is the man who has an interest in his favor.

V. In certain phrases, which are conditional or hypothetical, the sign of the condition may be omitted, and the nominative placed after the auxiliary; as, "If he did but know my anxiety," for if he did but know — knew the facts! "If for I had known! Would they consent! for if they would, &c.

VI. When the words whose, his, their, her, mine, your, &c. precede the verb with a governing word, the nominative may follow the verb; as, "Our whose modifications have been made most complex modes.

VII. In interrogative sentences, the nominative follows the verb when alone, or the first auxiliary; as, "Believeth thou! Will he consent! He be base, or his pride high!" When such questions are expressed in the imperative mood; as, go thou; "be ye warm and filled! But after a single verb, the nominative is commonly omitted; as, arise, flee.

Note 3.—In poetry, the nominative is often omitted in interrogative sentences, in cases where in prose the omission would be improper; as, "Live there who loves his pain! Milton. That is, lives there a man or person.

Note 4.—In the answer to a question, the whole sentence is usually omitted, except the name, which is the principal subject of the interrogative; as, who made the chief discoveries concerning vapor? Black. Poetry, John is such a man the name. He had, or is, the name. No!" for to whom the name? for to whom the name? that is, said or replied.

Note 5.—When a verb is placed between two nominatives in different numbers, it may agree with either, but generally is made to agree with the first, and this may be considered as preferable; as, "His ment was locusts and wild honey." "It [piracy] is the remains of the manners of ancient Greece." Anarch. ch. 38.

Note 6.—Verbs follow the connective then, without nominative expressed; as, "Not that any thing occurs in consequence of our late loss, but more afflictive than reason to be expected." Life of Conquer, Let. 62.

"He felt himself addicted to philosophical speculations, with more ardor than consisted with the duties of a Roman and a senator." Murphy's Tucitus, 4. 57.

All words that lead the mind to any other ideas, than are supposed really to exist in that thing.

Loeke, 2. 25. "More elliptical the that which was to be expected." That which or those which will generally supply the ellipsis.

Note 8.—We sometimes see a nominative introducing a sentence, the sense suddenly interrupted, and the nominative left without its intended verb. The name of a person or thing set up in the midst of a discourse and without the verb, is often a mere introduction, to attract attention, and call the mind to the subject of the sentence. Note 8. This form of expression is often very striking in animated discourse. The first words being the subject of the discourse and the following words being the verb, are made to union in the discourse, and the mind of the speaker, in the fervor of animation, quitting the trammels of a formal arrangement, rushes forward to a description of the thing mentioned, and presents the more striking ideas in the form of explanation.

Rule 4.—When a name, nominative, or pronoun associated with a participle of the present tense, may stand in construction without a verb, forming the case absolute, or clause independent; as, "Jesus had conveyed himself away, a multitude being in that place." John x. 13. Here a single word is enough; as, Jesus had, a multitude being in that place. The last word, a participial, with a participle of the present tense, may stand in construction without a verb, forming the case absolute, or clause independent; as, "Jesus had conveyed himself away, a multitude being in that place." John x. 13. Here a single word is enough; as, Jesus had, a multitude being in that place.

"By memory we conceive heat or light, yellow or smell, the object being removed." Locke, 2. 10.

I have, notwithstanding this discouragement, attempted a dictionary of the English language. In no other case, does notwithstanding follow the sentence. But this position makes no difference in the true construction, which is, "any law or custom to the contrary notwithstanding." Locke, 2. 27, 28.

The penalty shall be fine and imprisonment, any law or custom to the contrary notwithstanding.

The latter phraseology is peculiar to the technical law style. In no other case, does notwithstanding follow the sentence. But this position makes no difference in the true construction, which is, "any law or custom to the contrary notwithstanding." Locke, 2. 27, 28.

"Whatever substance begins to exist, it must, during its existence, necessarily be the same." Locke, 2. 27, 28.

The penalty shall be fine and imprisonment, any law or custom to the contrary notwithstanding.

GRAMMAR OF THE

1. Noting a definite substitute, pointing to the following sentence—that which follows being provided.

2. It is not uncommon for authors to carry the practice of abridging discourse so far as to obscure the common regular construction, and to place substituti in the nominative, because both the substitute and the participi in the case independent. For example: "Conscious of his own weight and importance, his conduct in parliament would be directed by nothing but the constitutional duty of a peer."—Jumus, Let. 19. Here is no noun expressed to which conscious can be referred. We are therefore to supply the necessary words, to complete the construction—"He being conscious"—forming the clause independent.

RULE I. A sentence, a number of words, or a clause of a sentence may be changed into another, in which the verb is always in the third person of the singular number; as, "All that is in a man's power in this case, is, only to observe what the ideas are which take their turns in the understanding."—Locke 2. 14. Here the whole clause in italics is the nominative to is.

RULE II. The infinitive mode may be the nominative to a personal verb; as, "to see is desirable."—Cicero, de Senec. ca. 10. Sometimes an attitude is joined with a personal verb; as, "to be blind is calamitous."—Blackstone's Comm. Intro. In this case the attribute has no name expressed to which it refers.

RULE III. "To attack vices in the abstract, without touching persons, may be safely fighting with shadows."—Pope, Let. 48. The construction is abstract, and applicable to any human being, but not applied to any.

RULE IV. In some cases the imperative verb is used without a definite nucleus; as, "I will not take anything that is thine, save only that which the young men have eaten."—Gen. 24. 25. 26.

RULE V. "Israel burned none, save Hazor only."—Josh. xi. 13.

RULE VI. "I would that all were such as I am, except these bonds."—Acts xxvi. 29.

RULE VII. "Our ideas are movements of the nerves of sense, as of the optic nerve in recollection."—Darwin, Zoon. sect. 39.

RULE VIII. "It is not the distributive effect of either and every, such as to demand a singular verb? So in the following: "The judicial and every other power is accordable to the legislative."—Paley, Phil. 6. 8.

RULE IX. "The names and substitutes belonging to different persons, are thus joined, the plural substitute must be of the first person in preference to the second and third, and of the second in preference to the third. I, you, and he are represented by we and you, by he. Pope in one of his letters makes you or I be represented by you or I. Either you or I are not in love with the other."—Locke 2. 14. 21. The sentence is an awkward one, and not to be imitated.

RULE X. Substitutes for sentences, whether they represent a single clause, or the parts of a compound sentence, are always in the singular number; as, "It is true indeed that many have neglected opportunities of raising themselves to honor and to wealth, and rejected the kinder offers of fortune."—Rambl., No. 58. Here it and that refer to the clauses which follow—"It is true that, many have neglected opportunities of raising themselves to honor and to wealth, and rejected the kinder offers of fortune."—Blair.

Note 1. Provided that, says Johnson, is an adverbial expression, and we sometimes see provided numbered among the conjunctions, as its corresponding word is in French. Strange work has been made with Grammar! 1

1 In this last example an evidence that mine is in the possessive case! This is the very common practice with the best Greek and Roman writers. "Mens omnia, et ratione, et eos qui ex se habeant."—Cicero de Senec, ca. 19. "Sed etiam ipsae terrae vis as natura selecta."—Rom. 15.

2 The Romans used a greater latitude in joining plurals with collective names than we can. "Magna pars in ipsius capitanei mecum esse."—Lit. 2. 20. Horace makes it an attribute of the masculine gender, agreeing with a noun in the singular of the feminine gender.
ENGLISH LANGUAGE.

"Mine answer to them that do examine me is this." 1 Cor. iv. 13.

"These are not the children of God." John vii. 45. A verb or verbs belonging to a subject, and their number, which is omitted, but the same name in the plural immediately follows after a connecting particle, as "a man declares in autumn, when he is eating them, or in spring when they are none, that he loves grapes." Locke, 2. 29. But this arrangement is usually awkward and seldom allowable.

Rule XII. When a new clause is introduced into a sentence, with two nominatives or infinitives, uniter of which person is the representative of the whole of the last part of the sentence, and its natural position is after that clause. The substitute what combines in itself the offices of two substitutes, one the nominative to the verb, and the other is governed by the substitute for a noun, to which the substitute is related. Exception 1. When some word or words are dependent on an adjective, they are separated from nouns by a; as, "such a character is known to me." Paragraph. No. 83. "He who suffers not his faculties to be torpid, has a chance of doing good." An adjective which, if expressed, would be the nominatives to two verbs, each in distinct clauses, as "who sometimes used as the substitute for things, but must unwarrantably. "Who and whom are exclusively the substitutes for persons; whose of all genders, and as correctly applied to things as to persons.

Rule XIV.—The definitive adjectives, this and that, the only attributes which are varied to express number, must agree in number with the names to which they refer; as, this city, that church; these cities, those churches.

Rule XV.—Adjectives are usually placed before the nouns to which they belong; as, a wise prince; an obedient subject; a pious clergyman; a brave soldier.

Exception 1. When some word or words are dependent on an adjective, it follows the noun; as, knowledge requisite for a statesman; furniture convenient for a family.

Exception 2. When in adjective becomes a title, or is emphatically applied to a proper name. "Great" Henry the First; Lewis the Great; Wisdom incomprehensible.

Exception 3. Several adjectives belonging to the same noun, may precede or follow the noun to which they belong; as, a learned, wise and martial prince, a learned, wise and martial prince.

Exception 4. The word often separates the noun from its adjective; as, war is expensive; gaming is ruinous.

Exception 5. An emphatical adjective is often used to introduce a sentence, in which case it precedes the noun which it qualifies, and sometimes follows the noun, as "Great is the Lord;" "many a time;" "fortunate" is that young man who escapes the snare of vice.

Exception 6. The adjective all may be separated from its noun by the, which never precedes it in construction; as, "all the nations of Europe." But the adjective are is separated from nouns by a; as, "such a character is rare;" "many a time.

All adjectives are separated from nouns by a, when preceded by so and as, as "so rich a dress," "as splendid a retinue;" and they are separated by or, when preceded by how and however, as "how distinguished an
set of bravery; "how brilliant the prize;" "however just the complaint;" the word sooner may be interposed between the adverb and the noun; as, "how clear sooner this idea of infinity;" "how remote sooner it may seem;"

Double is separated from its noun by the; as "double the distance;" in such cases, never preceding double. But a precedes double, as well as other adjectives.

All and singular precede the before the noun in these phrases—"All and singular the articles, clauses and conditions;" "All and every of the articles;" phrases of the law style.

Rule XVI.—Adjectives belong to verbs in the infinitive mode; as, "to see is pleasant;" "to ride is more agreeable than to walk;" "to calumniate is detestable."

What is agreeable to this? The answer is found in the whole of the last clause of the sentence.

"Antiscio—to verify the character prophetically given of him by Daniel, act the part of a vile and most detestable person, agreeable to what hath been aforementioned of him." Prideaux, part 2. b. 3.

"Her majesty signified her pleasure to the admiral, that as soon as he had left a squadron for Dunkirk, agreeable to what he had proposed, he should proceed to Harwich." Burchel's Nave Hist. 459.

"Independent of his person, his nobility, his dignity, his relations and friends may be urged;" &c. Guthrie's Quintilian.

"No body can doubt but that these ideas of mixed modes are made by a voluntary collection of ideas put together in the mind, independent from any original patterns in nature." Locke, 3. 5.

"The perceptions are exalted into a source of exquisite pleasure independently of every particular relation of interest." Studies of Nature, 12.

In the first of these examples, relatively is used very awkwardly for as relative, or as relating, or as it relates, or in relation; for the word has a direct reference to government.

In the second example, independently is used as if it had been intended to modify the verb alone—the perceptions are independently excited. But the manner of exciting is not the thing described. It is not that the perceptions are excited in an independent manner, nor in a manner independent of a relation to interest; but the fact, that the perceptions are excited into the sense of exquisite pleasure, is a result of every relation of interest. Equally faulty is the following sentence—

"Agreedly to this law, children are bound to support their parents." Paley, Phil. Vol. xv. 8.

We observe in this passage, that while, the attribute of hand, has a connection with the verb open; for it is not "open thy hand," but the attribute is supposed to be the effect of the act of opening. Nor can the modifier, widely, be used; for it is not simply the manner of the act which is intended, but the effect.

"Open wide a leaf."

"A southerly wind succeeded blowing fresh."

ENGLISH LANGUAGE.

When two qualifying words are wanted, the latter may be an adjective, though applied to a verb; as, "He beat time tolerably well."-Goldsmith, An. Nat. ch. 12.

"The air will be found diminished in weight exactly equal to what the iron has gained."-Lavoisier, ch. 3.

"Horses are sold extremely dear."-Murray's Grammar.

"And greatness is added."-Thomson, Springs.

"This was applying a just principle very ill."-Volut, Trans. 2. 7.

It will be remarked that we have no adverbial form of the adjective in the comparative and superlative degrees, except that of more and most, less and least, which is applied to the regular terminations, in these degrees, to qualify verbs. Examples:

"To hands that longer shall the weapon yield."-Holde's Tasso, 7.

"Now, then the pleasing race of duties, and their dear and parental care, Warther'd us sing."-Hanside, Pious, of Imag. 1. 323.

"So while we taste the fragrance of the rose, Glow not her blush the fairer?"-Ibn. 2. 77.

"When we know our strength, we shall the better know what to undertake with hopes of success."-Locke, 1. 6.

"But he that can most inform or best understand him, will certainly be welcomed."-Rambler, No. 99.

"I have dawnt the longer on the discussion of this point."-Junius, Let. 17.

"The next contains a spirited command and should be pronounced much higher."-Murray's Grammar.

"Leviathan, which God of all his works Created biggest that swim th' ocean's stream's."-Milton. 1. 201.

"But mercy first and last shall brightest shine."-Ibn. 3. 134.

"Such opinions as seemed to approach nearest [to] the truth."-Locke, Eth. Phil. 2. 59.

"Her smiles, amid the blushes, lovelier show; Amid her smiles, her blushes lovelier grow."-Holde's Tasso, 15.

Authors, misguided by Latin rules, and conceiving that every word which is qualified by an adjective is used to modify a noun, have pronounced many of the passages here recited and similar ones to be incorrect; and in such cases, where it is well established to bear censure, they call the adjective an adverb. Were it not for this influence in early education, which impresses a notion on all languages must be formed with the like idioms, we should never have received an idea that the same word may not modify a noun, an adjective and a verb.

So far are the words here used from being adverbs, that they cannot be changed into adverbs, without impairing the beauty, weakening the force, or destroying the meaning of the passages. Let the sentences be put to the ear, in which the sign of comparison is pronounced differently, after the same noun; as, "The blushes, being lovelier, glow—this is not the sense; nor will it answer to express the utmost extent of the quality."

"And lake every man his censer."-Aum. xvi. 17.

"And every one that findeth me, shall slay me."-Gen. iv. 14.

"And take every man his censer."-Num. xvi. 17.

"Neither of the ways of separation, real or mental, is compatible to pure equality."-Locke. 2. 13.

Errors. "Let each esteem others better than himself."-It ought to be, "Let each esteem others as better than himself."-There are bodies, each of which are so small."-Locke, 2. 8. It ought to be, "There are bodies, each of which are so small."-Note. A plural verb, which affirms something of a number of particulars, is often followed by a distributive which assigns the affirmation to the particular objects or individuals. Thus, "If metals have, each a peculiar earth," it is more proper to say, "If metals have, each a peculiar earth." There is no other way of resolving the phrase. This manner of expression is common, though quite useless; as the last clause, "Each metal has," is sufficient. It has not the merit of an abbreviation. This phrase, "Let us love one another," is of a similar construction, but it is not easy to find a substitute of equal brevity.

"Rambler, ch. 2. 11."

Note 2. — In English, two nouns are frequently united to form a new noun of a second degree, and of a different signification from either of the two first terms. Thus, gray turns white—objects may be seen double—may rise high—fall low—grow strait, or thick, or thin, or fat, or lean—one may speak loud —the sun shines clear—the finer a substance is pulverized—to grow reiser, to plough reiser-and similar expressions without number, constitute a well established idiom, as common as it is elegant.

"Full many a gem of purest ray serene."-Gray.

"Great is the vices which enter deeper or more atiof, whether the physical force acts upon the body is more imo a, or most, least perfect."-Rambler. No. 78.

"In great terms one does not feel the heat of the sun;"-Thomson, Thetis's Minstrel.

"In expressing the last attribute belongs more immediately to the noun expressing its quality; and the first attribute qualifies the second. Not unfrequently two attributes are used to modify a third, or the principal one; as, "The manner in which external force acts upon the body is very little altered; but the city was very bravely defended; the soldiers were most amply rewarded; a donation more benevolently bestowed; a house less elegantly furnished; a man the least pell-mell disturbed."-We have a few other words which are often used to modify adjectives as well as verbs; as, a little; a great deal; a trifle. "Many letters from persons of the best sense—do not a little encourage me."-Spectator, 124. "It do not hurt at all;"—a trifle stronger; the last of which expressions is colloquial.

"The air will be found diminished in weight exactly equal to what the iron has gained."-Lavoisier, ch. 3.

"Great is the vices which enter deeper or more atiof, whether the physical force acts upon the body is more imo a, or most, least perfect."-Rambler. No. 78.

"In great terms one does not feel the heat of the sun;"-Thomson, Thetis's Minstrel.

"In expressing the last attribute belongs more immediately to the noun expressing its quality; and the first attribute qualifies the second. Not unfrequently two attributes are used to modify a third, or the principal one; as, "The manner in which external force acts upon the body is very little altered; but the city was very bravely defended; the soldiers were most amply rewarded; a donation more benevolently bestowed; a house less elegantly furnished; a man the least pell-mell disturbed."-We have a few other words which are often used to modify adjectives as well as verbs; as, a little; a great deal; a trifle. "Many letters from persons of the best sense—do not a little encourage me."-Spectator, 124. "It do not hurt at all;"—a trifle stronger; the last of which expressions is colloquial.

"The air will be found diminished in weight exactly equal to what the iron has gained."-Lavoisier, ch. 3.

"Horses are sold extremely dear."-Murray's Grammar.

"And greatness is added."-Thomson, Springs.

"This was applying a just principle very ill."-Volut, Trans. 2. 7.

Note 2. — In English, two nouns are frequently united to form a new noun of a second degree, and of a different signification from either of the two first terms. Thus, gray turns white—objects may be seen double—may rise high—fall low—grow strait, or thick, or thin, or fat, or lean—one may speak loud —the sun shines clear—the finer a substance is pulverized—to grow reiser, to plough reiser—and similar expressions without number, constitute a well established idiom, as common as it is elegant.

"Full many a gem of purest ray serene."-Gray.

"Great is the vices which enter deeper or more atiof, whether the physical force acts upon the body is more imo a, or most, least perfect."-Rambler. No. 78.

GRAMMAR OF THE

 Worth not only follows the noun which it qualifies, but is followed by a denoting price or value; as, a book worth a dollar or a guinea; it is used in the same way. 

 Erato, 98. If a substitute is used after worth, it must be in the possessive case. 

 It is worth them or it. 

 But worthy, the derivative of worth, follows the usual construction of adjectives, and may precede the noun it qualifies; as, a worthy man. 

 Regimen or Government.

 RULE XXVII. One noun signifying the same thing with another, or descriptive of it, may be in apposition to it; that is, may stand in a like character or case, without an intervening verb; as, Paul, the apostle; John, the Baptist; Newton, the philosopher; Chatham, the orator and statesman. 

 Note 1. In the following sentence, a noun in the plural stands in apposition to two nouns in the singular, joined by an alternative; "The terms of our law will hardly find words that answer them in the Spanish or Italian, no scanty languages." Locke, 3. 5. 8. 

 Note 2. Nouns are not infrequently set in apposition to sentences; as, "whereby if a man had a positive idea of infinite, either Baratarian or Empyrean, he could add two infinites together, may, make one infinite infinitely bigger than another; absurdities too gross to be confuted." Locke, 2. 17. 20. 

 Here the absurdities are the whole preceding propositions. 

 "You are too humane and considerate; what things few people can be charged with." Pope. 

 Here things is in opposition to humane and considerate. Such a construction may be justified, when the ideas are correct, but it is not very common. 

 Men's bravery; England's fleet; a Christian's hope; Washington's prudence. 

 the other the thing possessed, the name of the possessor precedes the other. 

 Note 3. When of is used before the possessive case of nouns, there is a noun with whatever, whatsoever or whichever, preceding, is placed before the governing verb; as, "whatsoever positive ideas we have." Locke, 2. 17. 

 Note 1. We have some verbs which govern two words in the objective case; as, "Did I request thee, maker, from my clay To mould me man?" Milton, 10. 744. 

 "God seems to have made him what he was." "Ask him his opinion." "You have asked me the news." 

 Will it be said that the latter phrases are elliptical, for "ask of him his opinion? I apprehend this to be a mistake. According to the true idea of the sentence, ask of him his opinion, must be the object of the phrase in the objective case, as much as in this, "Ask him for a guinea;" or in this, "Ask him to go." 

 This idiom is very ancient, as we often see it in the Latin. "Interrogatis sentientia." Liv. 26. 35. 

 "So is Scipionem orae." Rom. 27. 17. 

 "Auxilia reginae erat." Rom. 19. 5. The idiom in both languages had a common origin. 

 Note 2. Some verbs were formerly used as transitive, which are now no longer considered as such; as, "he repented him"—"flee they away"—"the sea swerved"—"the sun was amounted," &c. which are held improper. 

 Cease, however, is used as a transitive verb by our best writers. "Cease this impious rage." Milton, 10. 744. 

 "Her lips their music cease." Hoole's Tasso. 

 RULE XV. Intensive verbs are followed by the name of the action or effect, which the verb expresses in action; as, "to live a life of virtue;" "to do the death of the righteous;" "to dream dreams;" "to run a race;" "to sleep the sleep of death;" "to ascend or descend a flight of stairs, a ladder, or a mountain." 

 We observe, in these examples, life is the name of being supposed to be complete, as race is the name of the act of running when accomplished. 

 Note.—Nearly allied to this idiom is that of using, after verbs transitive or intensive, certain nouns which are not the objects of the verb, nor of any transitive or intensive verb, but which are either the names of the result of the verb's action, or closely connected with it. Examples: "A guinea weighs five penny weight, six grains;" "a crown weighs nineteen penny weight;" "a piece of cloth measures ten yards;" "he died on his hinges great hard thunder;" "And rivers run potable gold;" "The crisp green leaves of trees were nimble odorous gums and balm;" "Grin a ghastly smile." Milton. 

 "Her lips blush deeper sweets;" "To ascend or descend a flight of stairs, a ladder, or a mountain." 

 "To cost a guinea." 

 Under this rule or the following may be arranged these expressions. "Let them go their way." "When matters have been brought this length." 

 "We turn our eyes this way or that way." "Reckoning away from ourselves, a yard, a mile, &c." Locke, 2. 17. 

 Similar to this idiom are the phrases, to go west or east—pointing north or south, north-west or south-east, and the like, which I find to be Saxon phrasal and very frequent. 

 In some instances verbs of this sort are followed by two objects; as, "a ring cost the purchaser an eagle." 

 RULE XVIII. Names of certain portions of time and space, and especially words denoting continuance of time or progression, are used without a governing word; as, "Jacob said, I will serve thee seven years for Rachel." 

 "And dust shalt thou eat all the days of thy life." "And he abode with..." 

 The radical idea of weight is carry, bear or sustain, from the Saxon weog, a balance. The idiom in question has its original in that idea—a guinea weighs five penny weights, six grains—that, is carries or sustains that weight in the scales. How much of the propriety, and even of the beauty of language is lost, by neglecting to study its primitive state and principles!
ENGLISH LANGUAGE.

In the sense in which they are called conjunctions or adverbs, have an objection, would have required after it the objective else. But both to these rules there are exceptions.

RULE XXIX.—The verb he has the same case after it as before it; or two substitutes connected with be in construction are in the same case. It is, I, be not afraid. "Then art she?" It is he. "Who was he?"

If he do men say that I am, Whom do they represent to be? But "Who do I say that I am," is incorrect.

RULE XXX.—Transitive verbs and their participles admit of a sentence, a clause or number of words as their object; as, "He is surprised so much, as to consider how much nearer he approaches to his end." Rambler, No. 78.

Consider what? The whole following clause, which is the object of the verb.

If he escapes being banished by others, he fear he will banish himself.

Here being banished stands in the place of a noun, as the object after escapes.

Add to this, what, from its antiquity is but little known, how from that every circumstance, the recommendation of novelty. Hermes, Preface.

In this sentence the whole of the clauses in italics, is what is to be added, and is an actual phrase as used adverbially; for the fact excepted is after the verb, and in the construction present tense.

Note.—It may be here observed that in some of the passages cited the verb has a definite nominative; the verbs save, except, suppose, add, etc. are in the imperative mood, but the address is not made to any particular person or persons. And this probably has led authors to class save and except as auxiliaries, and other verbs or adverbs, or to consider them as used adverbially; for it has been alter observed that the class of adverbs has a sort of common sink to receive all words which authors have not been able to comprehend.

This no change that suppose, add, admit, allow, and other verbs, which are constantly used in the same manner, should have hitherto escaped the same doom! In the passages above cited from Paley, suppose is used precisely in the same manner, as except and save in others. Indeed nothing but the most inexusable negligence could have led critics to this classification of save and except—for in many passages of scripture, those very words are used in the sense in which they are called conjunctions or adverbs, have an object following them, like other transitive verbs; as, "Israel burned none of the young men, women, or children."

He will not raise to attack his adversary. "You have dared to throw more than a suspicion upon me."

The same remark may be extended to the future tense. "He will not dare to attempt the nefarious design.

In like manner, need, when a transitive verb, is regular in its inflections, as, "A man needs more prudence"—"The army needed provisions." When intradvice, it more generally drops the personal terminations, and is used as an auxiliary, and is followed by a verb, without the prefix to; in short it has the form of an auxiliary, and in the German, it is classed with the auxiliaries. Examples: "I dare engage.

He may go, can go, must go, shall go, will go." Locke.

There need be no difficulty in this verb, when used as an auxiliary, and is followed by a verb, without the prefix to; as, "Nobody need be afraid he shall not have scope enough." Locke, 2.22.9.

Dare and need are irregular in their inflections. "A man need not fear he shall not have scope enough." Locke, 2.22.9.

"I dare not go any farther." "I need not go any farther." "I dare not go any farther." "I need not go any farther." "I dare not go any farther." "I need not go any farther."

The past tense, when regular, is followed by the infinitive with the usual prefix. "We have to dare to throw more than a suspicion upon me." "He need not be anxious." "We heard him relate the story." "We felt the earth tremble." "Which he did not know." "He did not know where he was going."

In the use of this verb, there is another irregularity, which is peculiar, the verb being without a nominative, expressed or implied. Whereof he needs no account. Milton, P. I. 4. 285. "There is no evidence of the fact, and there needs none."

This is an established use of need.

Note 2.—The infinitive mode has, in its sense and use, a near affinity to a noun and often has the construction of one. It is much employed to introduce sentences which are the nominatives to verbs, as well as the objects following them; as, "To will is present with me, but to perform that which is the object after found.

Note 3.—A common mistake in the use of the infinitive is, to use the perfect tense after another verb in the past time, when in fact one of the verbs in the past time would correctly express the sense; thus, "I would have an anomaly, the noun must be singular in the German, it is classed with the auxiliaries. Examples: "I dare engage." "Peter's Works Letter to Gay." "I dare not confess." "Swift to Gay." "I dare say." Locke. But Edition, 28. "Durst I venture to deliver my own sentiments." Hume, Esq.

But to make this form of expression correspondent to the other clause, that ought also to be varied, and a definite person introduced; thus,—"it does not appear (to us) possible to act otherwise, considering the weakness of our nature being considered." But this amendment would be of no advantage."

It is not possible for John or Thomas to act otherwise, he considering the weakness of his own nature being considered. Hence considering is left without a direct application to any person. Whenever foundation there may be for this explanation, the idiom is common and well authorized.

ENGLISH LANGUAGE.

Fifthly. When adverbs are emphatical, they may introduce a sentence, and be separated from the word to which they belong; as, "How completely this most amiable of human virtues had taken possession of his soul!"

Part. Lect. 8. This position of the modifier is most frequent in interrogative and exclamatory sentences.

The adverb always is usually placed before a verb.

"Never commonly precedes a single verb," except as, which it follows; as, "We are never absent from Church on Sunday." It is sometimes placed before the verb, as, "The church has been at court," but it is more correctly and elegantly placed after the first auxiliary, as, "He has never been into town," "he has never been intoxicated."

This word has a peculiar use in the phrase; "Ask me never so much money;" there is a very just reason for the change of order so as to have the verb before the adverb, as, "Ask me never so much money, but don't destroy the cabinet," "Ps. lix. The sense is, "Ask me so much money as never you asked before," an abbreviation singularly expressive of the idea of asking any amount or extent. Authors not understanding it, have substituted ever for never, which implies an absolute term, only to destroy the cabinet, of the phrase. The word both is now common, but never is preferable. "Some agreements indeed, though never so expressly made, are deemed of so important a nature, that they ought not to rest in verbal promise only."

The use of here and there, in the introduction of sentences before verbs, forms an authorized idiom of the language; though the words may be considered as redundant. The practice may have originated in the use of the hand in pointing, in the early stage of society.

Here and there, in enumerating places, are now used in reference to words, subjects and various ideas of which place is not predicable. "It is not so with respect to volitions and actions; here the coalescence is intimate." Hermes, ch. 8. "We feel pain, in the sensations, where we are never absent from Church on Sunday." It is sometimes placed before a verb to express the idea of an unbroken connection; as, "I have never so wisely judged," "The voice of charmers, charming never so wisely, animates the whole army with courage." Fielding's Socrates, p. 188.

Rule XL. — In polite and classical language, two negatives destroy the negation. The consequence is, we have two modes of speaking directly opposite; as, "If his son ask bread, will he give him a stone?" "If his son ask bread, will he give him a stone?" "If his son ask bread, will he give him a stone?"

Locke, 2. 7. 8.

A separation of the preposition to such a distance from the word with which it is connected in construction, is perplexing and inelegant.

Rule XLI. - Prepositions govern sentences and clauses or members of sentences; as, "Without seeking any more justifiable reasons of hostility."

Hume, 1. 5. 21. Blair, Sermon.

"Besides making an expedition into Kent."

"From what has been said."

"To the general history of these periods will be added, &c."

"By observing these rules and precautions."

"In comparing the proofs of questionable facts."

"For want of carefully attending to the preceding distinction."

"After men became Christians."

Enfield. Edin. ch. 1.

"Before you were placed in the world."

Jenius. Let. 8.

"Personal bravery is not enough to constitute the general, without he animates the whole army with courage."

Fielding's Socrates, p. 195.

"Pray, get these verses by the tongue I see you."

Cheslet's Let.

"After having made believe that I possessed a share in your affection."

Pope. Let.

Note. — We observe, in the foregoing passages, the preposition has two uses. One is to preclude a word to which other words are annexed as necessary to complete the sense — about the beginning. Here the sense is not complete in the time is not designated. To define the time which the object of the preposition about, it is necessary to add the words — of the eleventh century — about that time. So that the whole clause is really the object after the preposition.

The other use of the preposition is to precede nouns, verbs or other words which are not objects of the preposition, but which have a construction independent of it; as, "after men became Christians." Here men is the nominative to become; yet the whole clause is as really the object of the preposition governed by after, as the word hour, in the phrase, after that hour. "Against a person" is in the phrase of the same word is an object in the objective case after against; but the whole affirmation is the object. "Without we can possess ourselves," has a like construction, and though superceded, in a degree, by unless, a word of similar import, is a true English phrase. "After [this fact] men became Christians — Against [that time when] I see you — Without [this fact] we can possess ourselves.

Rule XLI. — Prepositions of numbers, if, though, unless, and lest, may be followed by verbs in the future tense, without the usual auxiliaries, shall, will, or should; as, "If his son ask bread, will he give him a stone?" "If he ask a fish, will he give him a serpent?" "Though he say me, yet will I trust in him." "He shall not eat of the holy things, unless he wash his flesh with water." "Lest thou say I have made Abram rich." "Except he have rather he shall not see the land which I gave him." "Then his master shall curse him."

"Whether he has been numbered also among the conjunctures, which require the conditional mode, but by an egregious mistake. It is not a connective, nor does it imply a condition or hypothesis, but an alternative.

Rule XLI. — Connectives join two or more clauses or members in a compound sentence; as, "Keep thy tongue from evil, and thy lips from speaking guile."

Here are two clauses united by and, which continues the sense and preserves the repetition of the verb keep.

I sought the Lord, and he heard me, and delivered me from all my fears. Here are three clauses combined into a sentence or period by the help of and; but a new verb is introduced in each, and the second connecting pronoun the repetition of the substitute he only.

"A wise son heareth his father's instruction, but a scorner heareth not rebuke." Here but joins the two clause, but a new character is the nominative to a distinct verb, in the second clause, which exhibits a contrast to the first, and no word is omitted.
A simple sentence or clause contains an affirmation, a command or a question, that is, one personal verb, with its nominative and adjuncts. By one personal verb is understood any single verb added by way of modifying or qualifying the primary words. Thus when it is said, "Greco was an orator of a diffusive style," the latter words, of a diffusive style, are the adjunct of orator, and the whole forms a complete simple sentence, with one noun or affirmation.

A phrase contains no assertion, or does not amount to a proposition.

**Comma.**

Rule I. In general the parts of a simple sentence or clause are not to be separated by any point whatever; as, "Hope is necessary in every condition of life." But when a simple sentence is long, or contains a distinct accessory or preterit notion, it may be divided by a comma; as, "To be very active in laudable pursuits, is the distinguishing characteristic of a man of merit." By revenging an injury, a man is but even with his enemy. In most cases, where a short pause will give distinctness to a clause, a comma is well placed after an important word; as, To mourn without measure, is folly: not to mourn at all, insensibility. The envoy, having accomplished his business, has returned.

Rule II. The sentence independent or case absolute, detached affirmations or phrases involved in sentences, and other important clauses, must be separated from the other parts of a sentence, by a comma; as, "The envoy has returned, his business being accomplished." The envoy, having accomplished his business, has returned.

Rule III. Two or more simple sentences closely connected in sense, and dependent on each other, are separated by a semicolon; as, "The revenues of poverty, of sickness, of captivity, would, if issued from a combined and irresistible power, be an engine bringing in its train the death of every nation, and causing the blind to see, the lame to walk, the deaf to hear, the lepers to be cleaned." Paley. "He who loves, serves and obeys his master, is a prince; industry steadily, prudently and vigorously pursued, leads to wealth; David was a brave, martial, enterprising prince."

The most innocent pleasures are the most rational, the most delightful and the most durable.

Rule IV. The sentence independent or case absolute, detached affirmations or phrases involved in sentences, and other important clauses, must be separated from the other parts of a sentence, by a comma; as, "The envoy has returned, his business being accomplished." The envoy, having accomplished his business, has returned.

Rule V. A comma is often required to mark contrast, antithesis, or marks of points in a sentence, and sometimes very properly separates words closely dependent in construction; as, "The envoy, having returned, his business being accomplished." The envoy, having accomplished his business, has returned.

Rule VI. A single name in apposition is not separated by a comma; as, "the Apostle Peter," but when such name is accompanied with an adjunct, it should be separated; as, "Parmenio, a friend of Alexander's, hearing the great offers that Darius had made, said, "Were I Alexander, I would accept them."

Rule VII. Terms of address, and words of others repeated, but not introduced as a quotation, are separated by a comma; as, "Wherefore, Sirs, be of good cheer." "My son, hear the counsel of thy father." "Thus shalt thou say unto the children of Israel, I AM hath sent me unto you."

Rule VIII. Modifying words and phrases, as however, may, hence, besides, in short, finally, formerly, etc. are usually separated by a comma; as, "It is, however, the task of criticism to establish principles." "Rambler.

**Semicolon.**

The semicolon is placed between the clauses of a period, which are less closely connected than such as are separated by a comma. A period is a stop or pause that separates sentences and not connect ed in construction with what follows. The pause after the period is marked by a comma; as, "a comma [:] a semicolon [:] or a colon [:]

The comma is the shortest pause, and is often used to mark the construction, where very little interruption of voice is allowable.

**Punctuation.**

Punctuation is the marking of the several pauses which are to be observed, in reading or speaking a sentence or continued discourse. By means of pauses, a discourse is divided into periods or complete sentences, and periods into clauses or simple sentences, and these, into phrases. A period is a stop or pause that separates complete sentences and not connected in construction with what follows. The pause after the period is marked by a comma; as, "a comma [:] a semicolon [:] or a colon [:]

The comma is the shortest pause, and is often used to mark the construction, where very little interruption of voice is allowable.
ENGLISH LANGUAGE.

period in itself, and might have been closed with a full point; but the author has added another division, by way of inference, and this is dependent on the first division. The author proceeds—"The one has all that perfection requires, and more, but the excess may be easily retrenched; the other wants the qualities requisite to excellence." Here the first division makes a complete proposition; but the antithesis begun by the numeral one, is not complete, without the last division.

"Economy is no disgrace; for it is better to live on a little, than to outlive a great deal."

"A friend cannot be known in prosperity; an enemy cannot be hid in adversity."

In general then, the semicolon separates the divisions of a sentence, when the latter division has a dependence on the former, whether the former has a dependence on the latter or not.

Secondly. When several members of a sentence have a dependence on each other, by means of a substitute for the same principal word, and the clauses, in other respects, constitute distinct propositions, the semicolon may be used; as, "Wisdom hath builded her house; she hath hewn out her seven pillars; she hath killed her beasts; she hath mingled her wine; she hath also furnished her table." Prov. ix.

Colon.

The Colon is used when the sense of the division of a period is complete, so as to admit of a full point, but something is added by way of illustration; as, "A brute arrives at a point of perfection that he can never pass: in a few years he has all the endowments he is capable of, and were he to live ten thousand more, would be the same thing he is at present." Spectator, No. 111.

Period.

The Period or full point marks a completion of the sense, a cadence of the voice, and the longest pause used between sentences. It closes a discourse also, or marks a completion of a subject, chapter or section.

To these may be added,

The dash [—] which marks a break in the sentence or an abrupt turn; as, "If thou art he—but O how fallen!"

The interrogation point (?) which closes a sentence which asks a question; as, "How long, ye simple ones, will ye love simplicity?"

The exclamation point (!) which is used after sudden expressions of surprise, or other emotions; as, "O happiness! Our being's end and aim!"

The parenthesis () and hooks [ ] include a remark or clause not essential to the sentence in construction, but useful in explaining it or introducing an important idea. They mark a moderate pause, and the clause included is read with a depressed tone of voice; as,

"Know then this truth (enough for man to know)

Virtue alone is happiness below." Pope.

It will be readily seen that the sentence is not at all dependent on the parenthetical clause; but the converse is not true, for that clause has a dependence more or less remote on the sentence. Thus, enough for man to know, is not intelligible without connecting it with the parts of the sentence preceding and following. So in this passage; "If any one pretends to be so sceptical, as to deny his own existence (for really to doubt of it, is manifestly impossible) let him enjoy his beloved happiness." Locke, 4. 10. 2. The included clause here is connected with the preceding part of the sentence, and it is a substitute for existence.

With regard to the duration of the pauses, it may be observed that the comma, semicolon, colon and full point, may bear to each other the proportion of one, two, four and six; and the interrogation point and exclamation point may be considered each as equal in time to the colon or period. But no precise rule can be given, which shall extend to every case; the length of the pauses must depend much on the nature of the discourse, and their respective proportions may be often varied to advantage by a judicious speaker.
DIRECTIONS

FOR THE

PRONUNCIATION OF WORDS.

The principal sounds of the vowels are the first or long, and the second or short.

**Examples of the first or long sound.**

- a in make, fate, grace.
- e in me, mete, bread sound like a in at.
- i in pine, bind, strike.
- o in note, hold, port.
- u in true, duty, rude.
- y in dry, defy, imply.

The principal things to be regarded in learning the pronunciation of English words are the accent and the sound of the vowel of the accented syllable.

**Rule I.** This mark ' called an accent, designates the accented syllable.

**II.** The accent placed immediately after a vowel indicates the vowel to have its proper sound; as in renew', devour', avow', appoint'.

**III.** A horizontal mark or point over a vowel shows it to be long, and when no accent is found in the word, this mark designates the accented syllable; as in discourse, encroach, bestow, enroll, cousin, suitable.

**IV.** An accent placed immediately after a consonant, or combination of consonants in the same syllable, indicates that the vowel of that syllable, if unpointed, is short; as in habit', tenet', conduct', ufeer', symbol'; adapt', intend', predict', depend', abrupt'.

1. A pointed vowel has the sound designated by the point or points; as in fullness, alterable, bookish, convey'.
2. A before II, ld and lk in monosyllables or accented syllables, has its broad sound like aw; as in befall', baldness, walking.

**V.** An accent immediately after a diphthong, or after a syllable containing one, designates the accented syllable, but the diphthong has its proper sound; as in renew', devour', avow', appoint', annoy'.

**VI.** This mark ' called in Greek the grave accent, placed before a vowel, indicates that vowel to have its broad sound like aw; as in renew', devour', avow', appoint', annoy'.

1. The letter y unaccented and terminating words of more syllables than one has two sounds: its proper sound as in see, and that of z as in his. It

In a few words of foreign origin, e final forms a syllable; as in syncope, simile. These are noted in their place.

**X.** E final is silent after l in the following terminations, ble, cle, cle, gle, kle, ple, tle, zle; as in able, monacle, cradle, ruffle, mangle, wrinkle, supple, rattle, puzzle, which are pronounced abl, manacel, cradl, ruffl, mangl, wrinlk, suppl, puzzl.

**XI.** In the termination ous is usually silent; as in token, broken, pronounced tok, brok.

**XII.** The termination ous in adjectives and their derivatives is pronounced as; as in gracious, pains, pimply.

**XIII.** The combinations ee, ci, ti, before a vowel, have the sound of sh; as in cecacious, gracious, motion, partial, gratiate, pronounced catasius, gradus, miss, marsh, ingratiate.

But it after a consonant have the sound of ch; as in christian, bast, Bastian, pronounced chrishan, baschian, nishchun.

So in combustion, digestion.

Si after an accented vowel are pronounced like zh; as in Ephesman, confusion, pronounced Ephezhan, confuzhan.

When ci or ti precede similar combinations, as in pronunciation, negotiation, they may be pronounced ce, instead of she, to prevent a repetition of the latter syllable; as pronunciation, instead of pronounced shun.

**XIV.** Gh, both in the middle and at the end of words, are silent; as in caught, bought, fright, night, sigh; pronounced caut, baut, fright, ni, si.

**XV.** Exceptions. In the following words gh are pronounced as f—
ough, clough, clough, enough, bough, loug, though, through.

When wh begin a word, the aspirate h precedes w in pronunciation. as in what, whiff, whale, pronounced hwat, hwif, hwale; having precisely the sound of oo, French our.

In the following words, w is silent—who, whom, whose, whoop, whole, whose.

**XVI.** H after r has no sound nor use; as in rheum, rhyme, pronounced rum, rhyme.

**XVII.** K and g before w are silent; as in know, gnaw, pronounced no, naw.

**XVIII.** W before r is silent; as in wright, wrenched, pronounced ring, reath.

**XIX.** After m, and closing a syllable, is silent; as in hymn, condemn.

**XX.** P before s and t is mute; as in baulk, walk, talk, pronounced bauk, wauk, talk.

**XXI.** Ph have the sound of f; as in philosophy.

**XXII.** The combination ng has two sounds: one, as in sing, singer; the other, as ininger, linger, longer. The latter is the more close palatal sound; but the distinction can only be learned by the ear.

**XXIII.** The letters cl answering to kl are pronounced as if written tl; clean, clear, are pronounced clear, tlem.

Gl are pronounced as dl; glory is pronounced glory.

**XXIV.** After m, and closing a syllable, is silent; as in hymn, condemn.

**XXV.** P before s and t is mute; as in psalm, pseudepigrapha, pronounced psalm, sylludomy, tarmigan.

The letter y unaccented and terminating words of more syllables than one is short, like i in pity and ability. This letter, in the plural number of nouns and in the third person singular of the present tense of verbs, is dropped, and is substituted and followed by y. The termination th is pronounced iz; as from vanity, is formed vanities, pronounced vanitize; from the verb to pity is formed pityes, pronounced pity.

But when y in monosyllables and accent y in other verbs ends the word, the termination ies in the third person is pronounced ize; as in flies from fly, defies from defy.

So cries, both the verb and noun, is pronounced cryes.
has its proper sound after the following consonants f, p, t, k, C, and th as in a aspirate, whether they end the word or are followed by e final; as in chief, caps, streets, franks, hates, hopes, fates, flakes, breaths, wreaths. It has the sound of z, after b, c followed by e final, d, g, gh, l, m, n, r, s and ss, e, v, au, ay, cw, ey, ew, o, ow, sh, ag, th, nasal, ch, ae, ie, both in nouns and verbs, and whether these letters end the word or are followed by e final; as in robes, races, reds, rides, rages, toils, dreams, sighs, rates, bases, waves, roses, passes, mazes, laws, days, news, preys, vows, joys, brushes,
ings, breaths, churches, foes, goes, flies.

So before c, s and y, have only the sound of the single letter c or y. Thus scene is pronounced sene; secolist, sidist.

S before m, in the terminations, asm, eam,ism, has the sound of z; as in spasm, telasm, baptism.

The pronunciation of the word which is radical or primitive in English is to be observed in the derivatives. Thus the letter a is directed to be pronounced as in bruise, and this direction is to be observed in all its derivatives. Earth being directed to be pronounced erth, all its derivatives and compounds are to follow the same direction. So freight is pronounced freight.

**POINTED LETTERS.**

A has the short sound of au as in alter, what.

E [e] is the same as e; as in cape, access.

I whether by itself or followed by i, or y, has the sound of a long; as in where, there, reign, survey.

O has the sound of o as in machine.

U has the sound of u as in full, pull.

CH have the French sound, like sh; as in chance.

G has the sound of j.

TH have their vocal sound; as in thon, thin.

U has the sound of yu; as in unique, use, pronounced yutriangle, yuse.

In digraphs or combinations of vowels, of which one only is pronounced, the mark over one vowel designates the sound, and the other vowel is quiescent; as in bear, boat, course, soul, blood, bow, low, crow, bestow. The digraphs or e, ee, e as have uniformly the sound of long e; as in meat, feet, wise, siege.

Before the letter r, there is a slight sound of e between the vowel and the consonant. Thus bare, parent, apparent, mere, mere, more, pure, pyre, are pronounced nearly bare, parent, apparent, meer, meer, meer, pyer.

This pronunciation proceeds from the peculiar articulation r, and it occasionally a slight change of the sound of a, which can be learned only by the ear.

The vowels in unaccented syllables are either short, or they have their first sound slightly pronounced. Thus in the words produce, domestic, o has its first sound, but pronounced rapidly and without force. In syllables which have a secondary accent, the vowel is often long, and little distinguishable from that in syllables having the primary accent; as in legislation, in which a in the third syllable has its long sound. In syllables wholly unaccented, the sounds of the vowels are so rapidly uttered, that they cannot be designated by written characters; they are all sounded nearly alike, and any attempt at a proper notation of such evanescent sounds serves only to perplex or mislead the learner.

Words of anomalous pronunciation, not falling under the foregoing rules, are printed in an orthography which expresses their true pronunciation.

The Welsh z has the sound of the vocal th, in thou.

In the expression of the sounds of foreign words in English characters, there is often an insurmountable difficulty, as there are sounds, in some languages, which English characters, according to our use of them, will not express with precision. But in regard to etymology, such exact expression of sounds is not necessary. For example, in regard to the affinities of words, it is wholly immaterial whether the Hebrew a is expressed by b, v, or bh; whether i is expressed by d, th, or dh; whether n is expressed by h or ch; and whether p is expressed by k, g, or qu. So in Arabic it is immaterial whether a, is expressed by th or ds, and o by g or kh.

The Arabic vowel fathe, I am informed, is differently pronounced by the Persians and Arabians; the one nation pronouncing it as the English a in mine; the other, generally, as a in fall. I have expressed it by a or awe.

It was desirable that the Russ, Saxon, Swedish, and German words should be printed with the appropriate types; but the utility would have hardly compensated for the expense of suitable fonts, and no essential inconvenience can result from the want of them; the English characters being sufficient to express the sounds of the letters, with all the exactness which etymology requires.

Note.—In the foregoing alphabets, the order of the Arabic and Ethiopic letters is conformed to that of the Chaldee and Hebrew. The reader will observe two or three defects, which are owing to the imperfection of the fonts of type.
AN

AMERICAN DICTIONARY

OF THE

ENGLISH LANGUAGE.

A

is the first letter of the Alphabet in most of the known languages of the earth; in the Ethiopic however it is the thirteenth, and in the Runic the tenth. It is naturally the first letter, because it represents the first vocal sound naturally formed by the human organs: being the sound uttered with a mere opening of the mouth without constraint, and without any effort to alter the natural position or configuration of the lips. Hence this letter is found in many words first uttered by infants; which words are the names of the objects with which infants are first concerned, as the breast, and the parents. Hence in Hebrew, הונ, is mother, and א, is father. In Chaldee and Syriac, א is father; in Arabic, ا; in Ethiopic, እ; in Malayan and Bengalese, እ; in Welsh, an; whence we retain doddy; in Old Greek and in Gothic, ἄ; in Irish, air; in Cantabrian, ata; in Lapponian, ati; in Abyssinian, ab; in Amharic, ab; in Shillie and Melindane, African dialects, hba; and popa is found in many nations. Hence the Latin mamma, the breast, which is, in popular use, the name of mother; in Swedish,amma, is a nurse. This list might be greatly extended; but these examples prove א to be the first natural vocal sound, and entitled to the first place in alphabets. The Hebrew name of this letter, 알ף, signifies an ox or a leader.

A

has in English, three sounds: the long or slender, as in place, fate; the broad, as in wall, fall, which is shortened in salt, what; and the open, as in father, glass, which is shortened in rather, fancy. Its primitive sound was probably an. א is also an abbreviation of the Saxon an or on, one, used before words beginning with an articulation; as a table, instead of an table, or one table. This is a modern change; for in Saxon an was used before articulation, as well as vowels, as, on tid, a time, an year, a year [See An.]

This letter serves as a prefix to many English words, as in asleep: awake: asleep: aground: aging. In some cases, this is a contraction of the Teutonic ge, as in escepe: aware, from the Saxon geatusan, to sleep; geverian, to beware; the Dutch gewaar. Sometimes it is a corruption of the Saxon on, as again: from overse: aware: from onucian, to watch or wake. Before participles, it may be a contraction of the Celtic ag, the sign of the participle of the present tense; as, ag-radh, saying; a saying, a going. Or this may be a contraction of on, or what is equally probable, it may have proceeded from a mere accidental sound produced by negligent utterance. In some words, a may be a contraction of at, of, in, to, or an. In some words of Greek original, א is privative, giving to them a negative sense, as in anonymous, from ανόητος. Among the ancients, א was a numeral denoting 500; and with a dash א 5000. In the Hebrew, Syr. Ch. Sam. and Ar. it denotes in quantities of the same weight or measure.

In music, א is the nominal of the sixth note in the natural diatonic scale—called by Guido Ia. It is also the name of one of the two natural moods; and it is the open note of the 2d string of the violin, by which the other strings are tuned and regulated. In pharmacy, א or aa, abbreviations of the Greek ana, signify of each separately, or that the things mentioned should be taken in quantities of the same weight or measure.

In chemistry, אאא stand for amalgama, or amalgamation.

In commerce, א stands for accepted, as in case of a bill of exchange. Merchants also number their books by the letters—א, ב, ג. Public officers number their exhibits in the same manner; as the document א, or ב. In mathematics, letters are used as representatives of numbers, lines, angles and quantities. 1. The modulation of the voice in reading or speaking, as practiced by the ancient Greeks, which rendered their rehearsal musical. More strictly, in English,

2. A particular stress or force of voice upon certain syllables of words, which distinguishes them from the others. Accent is of two kinds, principal and secondary; as in aspiration. In uttering this word, we observe the first and third syllables are distinguished; the third by a full sound, which constitutes the primary accent; the first, by a degree of force in the voice which is less than that of the primary accent, but evidently greater than that which falls on the second and fourth syllables.

When the full accent falls on a vowel, that vowel has its long sound, as in word; but when it falls on an articulation or consonant, the preceding vowel is short, as in habit. Accent alone regulates English verse.

3. A mark or character used in writing to direct the stress of the voice in pronunciation. Our ancestors borrowed from the Greek language three of these characters, the acute (') the grave (') and the circumflex (" or '). In the Greek, the first shows when the voice is to be raised; the second, when it is to be depressed; and the third, when the voice is to be uttered with an undulating sound.

6. Poetically, words, language, or expressions in general. Words, on your wings, to heaven her accents bear. Such words as heaven alone is fit to hear.

7. In music, a swelling of sounds, for the purpose of variety or expression. The principal accent falls on the first note in the bar, but the third place in common time requires also an accent.

2. Agreement; relation; conformity; resemblance; connection; as, the affinity of

3. In chemistry, attraction; elective attraction; that tendency which different species of matter have to unite, and combine with certain other bodies, and the power that disposes them to continue in combination. There are two kinds of affinity.

1. Affinity of aggregation, which is the power of homogeneous bodies to tend towards each other, unite and cohere, as two drops of water, which unite in one. 2. Affinity of composition, which is the tendency of bodies of different kinds to unite and form new combinations of bodies with different properties. Such is the affinity which unites acids and alkalies, the results of which combination are neutral salts.

The operations of this principle are various. When heterogeneous bodies have mutually an equal attraction, it is called compound affinity. When one substance decomposes a combination of other bodies, and parts of one with the other and precipitates the other, the power is called the affinity of decomposition. When bodies will not unite, but by means of a third, which enables them to combine, this is affinity by means of a medium.

Double affinity is when by means of four bodies, two decompositions and two new combinations are effected.

ALKALINES, a. Tending to the properties of an alkali; slightly alkaline. Encyclic.

ALKALI, n. plu. Alkalis. [Ar. یک ka-li, with the common prefix, the plant called glass wort, from its use in the manufacture of glass; or the ashes of the plant, which seems to be its primitive sense, for the verb signifies to fry.] In chemistry, a term applied to all bodies which possess the following properties: 1. a caustic taste; 2. volatilizable by heat; 3. capability of combining with acids, and of destroying their acidity; 4. solubility in water, even when combined with carbonic acid; 5. capability of converting vegetable hues to green. Thomson.

The term was formerly confined to three substances: 1. potash or vegetable fixed alkali, generally obtained from the ashes of wood; 2. soda or mineral fixed alkali, which is found in the earth and procured from marine plants; and 3. ammoniacal or volatile alkali, an animal product. Modern chemistry has discovered many new substances to which the term is now extended.

The alkalis were formerly considered as elementary substances; but it is now ascertained that they are all compounds. The alkalis are used in the manufacture of glass and soap, in bleaching and in medicine.

This word signifies then, the whole or entire thing, or all the parts or instances, all is incorporated into words, as "all in all" is a phrase which signifies, all things to a person, or every thing desired. Thou shalt be all in all, and I in thee.

When the words, and all, close an enumeration of particulars, the word all is either applied to persons or things, or very great numbers.

When the words, and all, close an enumeration of particulars, the word all is either applied to persons or things, or very great numbers.

This word is prefixed to many other words to enlarge their signification; as, all so long, this word retains its apposition.

This word, not only in popular language, but in the scriptures, often signifies, indefinitely, a large portion or number, or a great part. Thus, all the cattle in Egypt died; all Judea and all the region round about Jordan; all men held John as a prophet; are not to be understood in a literal sense, but as including a large part or very great numbers.

This word is prefixed to many other words, to enlarge their signification: as, already, always, all-prevailing.

ALLIGATOR, n. [Properly allagarto, from the Spanish and Portuguese lagarto, a lizard; L. lacerta. The Latin word seems to be connected with lacertus, the arm; and the animal may be named from the resemblance of his legs to arms.]
The American crocodile. This animal is of the lizard genus, having a long naked body, four feet, with five toes on the fore feet, and four on the hind, armed with claws, and a serrated tail. The mouth is very large, and furnished with sharp teeth; the skin is brown, tough, and, on the sides, covered with tubercles. The largest of these animals grow to the length of seventeen or eighteen feet. They live in and about the rivers in warm climates, eat fish, and sometimes catch hogs, on the shore, or dogs which are swimming. In winter, they burrow in the earth, which they enter under water and work upwards, lying torpid till spring. The female lays a great number of eggs, which are deposited in the sand, and left to be hatched by the heat of the sun.

AMBACIOUSLY, adv. In an amatory manner; by way of love. In German, Dutch, Swedish and Danish, it has the name of burnstone.

A hard semi-pellucid substance, tasteless and without smell, except when pounded or heated, when it emits a fragrant odor. It is found in alluvial soils, or on the sea shore, in many places; particularly on the shores of the Baltic, in Europe, and at Cape Sable, in Maryland, in the U. States. The ancient opinion of its vegetable origin seems now to be established, and it is believed or known to be a fossil resin. It yields by distillation an empyreumatic oil, and the succinic acid, which sublimes in small white needles. Its color usually presents some tinge of yellow. It is highly electrical, and is the basis of a varnish.

Vol. I.
Thus a plant is said to have life, because its growth resembles in some degree, that of an animal. In life and growth, then, there is an analogy between a plant and an animal. Learning enlightens the mind, like light to the mind, enabling it to discover things before hidden. When the things which have an analogy follow a preposition, that preposition must be between or betwixt; as there is an analogy between plants and animals, or between customs. When one of the things precedes a verb, and the other follows, the preposition used must be to or with; as, a plant has some analogy to or with an animal.

With grammarians, analogy is a conformity of words to the genus, structure, or general rules of a language. Thus the general rule in English is that the plural of a noun ends in es; therefore all nouns which have that plural termination have an analogy, or are formed in analogy with other words of a like kind. Johnson. Encyc.

1. The separation of a compound body into its constituent parts; a resolving; as, an analysis of water, air or oil, to discover its elements. Johnson. Encyc.

2. A consideration of any thing in its separate parts; an examination of the different parts of a subject, each separately; as, the words which compose a sentence, the notes of a tune, or the simple propositions which enter into an argument. It is opposed to synthesis. In mathematics, analysis is the resolving of problems by algebraic equations. The analysis of finite quantities is otherwise called algebra, or specious arithmetic. The analysis of infinites is the method of fluxions, or the differential calculus. Encyc.

4. Pertaining to analysis. Encyc. ANALYTICAL, a. Analogy; reasoning from some similitude in which things known bear to things unknown. An analogical word is one which carries with it some relation to the original idea. Thus the word "first" primarily denotes solidity or compactness in a material body; and by analogy, when used of the mind, it conveys the idea of qualities having a similitude to the solidity of bodies, that is, fixedness or immovability. Watts.

5. Analogy; reasoning from a similitude, in which things known bear to things unknown. Analogy, in a material body; and by analogy, when used of the mind, it conveys the idea of qualities having a similitude to the solidity of bodies, that is, fixedness or immovability. Watts.

6. Analogy; reasoning from a similitude, in which things known bear to things unknown. Analogy, in a material body; and by analogy, when used of the mind, it conveys the idea of qualities having a similitude to the solidity of bodies, that is, fixedness or immovability. Watts.

7. Analogy; reasoning from a similitude, in which things known bear to things unknown. Analogy, in a material body; and by analogy, when used of the mind, it conveys the idea of qualities having a similitude to the solidity of bodies, that is, fixedness or immovability. Watts.

8. Analogy; reasoning from a similitude, in which things known bear to things unknown. Analogy, in a material body; and by analogy, when used of the mind, it conveys the idea of qualities having a similitude to the solidity of bodies, that is, fixedness or immovability. Watts.

9. Analogy; reasoning from a similitude, in which things known bear to things unknown. Analogy, in a material body; and by analogy, when used of the mind, it conveys the idea of qualities having a similitude to the solidity of bodies, that is, fixedness or immovability. Watts.

Ant, in our vulgar dialect, as in the phrases, an ant eater, we ant, &c., is undoubtedly a contraction of the Danish ur, the substantive verb, in the present tense of the Indicative Mood, and not, I er-not, we ere-not, he er-not, or of the Swedish ar, the same verb, Infinitive case, to be. These phrases are doubtless legitimate remains of the Gothic dialect.

Ant, n. [Sax. anet, anet, contracted into ant; Germ. anise.] An enemt; a pismire. Ants constitute a genus of insects of the hymenopterous order, of which the characteristics are; a small scale between the breast and belly, with a joint so deep that the animal appears as if almost cut in two. The females, and the neuter or working ants, which have no sexual characteristics, are furnished with a hidden sting; and both males and females have wings, but the neuters have none. These insects meet together in companies, and maintain a sort of republic. They raise hillocks of earth, in which they live. In these there are paths, leading to the repositories of their provisions. The large black ants, in the warm climates of America, to avoid the effects of great rains, build large nests on trees, of light earth, roundish and plastered smooth.

Ant beam or Ant eater, a quadruped that feeds upon ants. This animal has no teeth, but a snout or muzzle, with a hidden sting; and both males and females have winged antennae, which are vernacular, or tapped in a fum, composed of a sticky substance spung like a spirit in an Ephraim. Ant egg, n. Little white balls found in the hillocks of ants, usually supposed to be their eggs, but found on examination to be the young brood, in their first state. They are vermiculated, wrapped in a film, composed of a sticky substance spung like a spirit in an Ephraim.

APOLOGUE, n. ap'olog. [Gr. orxoyoj, a long speech, a fable.] A moral fable; a story or relation of fictitious events, intended to convey useful truths. An apologue differs from a parable in this: the parable is drawn from events which pass among mankind, and is therefore supported by probability; an apologue may be founded on supposed actions of brutes or inanimate things, and therefore does not require to be supported by probability. Esop's fables are good examples of anapologues.

APOLOGY, n. [Gr. orxos, of orx and xélos, discourse.] An excuse; something said or written in defense or extenuation of what appears to other parties wrong, or unjustifiable; or of what may be liable to disapprobation. It may be an extenuation of what is not perfectly justifiable, or a vindication of what is or may be disapproved, but which the apologist deems to be right. A man makes an apology for not fulfilling an engagement, for publishing a pamphlet. An apology then is a reason or reasons assigned for what is wrong or may appear to be wrong, and it may be either an extenuation or a justification of something that is or may be disproved, by those who are not acquainted with the reasons.

APONEUROSIS, n. [Gr. arxos, of orx and xélos, discourse.] A problem or question; as, the problem of Apollonius, the problem of the tangent.

APHORISM, n. [Gr. appo/orx, from and orxos, form of speech.] A saying or maxim; a short, sententious, instructive remark, uttered on a particular occasion, or by a distinguished character. As that of Cyrus, "He is unworthy to be a magistrate, who is not better than his subjects;" or that of Cato, "Honories nihil agendo, discant male agere." Spenser.

APOLLOGETICALLY, adv. By way of apology; as, "I will not mention another argument, which, however, if I should, you could not refute." Smith. Johnson.

ARTIFICE, n. [See Art.] An artful or ingenious device, in the plan or arrangement of speech, applied to sound. An articulate sound is made by closing and opening the organs of speech. The junction or closing of the organs forms a joint or articulation, as in the syllables ab, ad, ap; in passing from one articulation to another; or organs may be opened, and a vowel is uttered, as in altitude; and the different articulations, with the intervening vocal sounds, form what is called articulate sounds; sounds distinct, separate, and modified by articulation or jointing. This articulation constitutes the prominent difference between the human voice and that of brutes. Brutes open the mouth and make vocal sounds, but have, either not at all, or very imperfectly, the power of articulation.

ARTICLE, n. [Gr. ἀρτική, from ἄρτος, bread; hence, a part, portion, piece; or, in grammar, an adjective used before a noun, to limit or define its application; as, the, this, that, in English; le, la, les, in French; il, la, to, in Italian. The primary use of these adjectives was to convert an indeterminate name into a specific one, and to express the purpose of letting blood.

ASSE T S , n. plu. [Fr. asse, enough; It. asse, enough, or many; fr. sath, sufficient; susadh, satisfaction; L. sat, satis, enough.]

Goods or estate of a deceased person, sufficient to pay the debts of the deceased. But the word sufficient, though expressing the original signification of assets, is not with us necessary to the definition. In present usage, assets are the money, goods or estate of a deceased person, subject by law to the payment of his debts and legacies. Assets are real or personal; real assets are lands which descend to the heir, subject to the fulfillment of the obligations of the ancestor; personal assets are the money, or goods of the deceased, or debts due to him which come into the hands of the executor or administrator, or which he is bound to collect and convert into money.

Blackstone.

ATTACH, v. t. [Fr. attacher; Arm. attachare; L. attingere, to touch, reach or strike; in the mountains of Sicily.

ATTACK, v. t. [Fr. attaquer; Arm. attackare; L. attackare, to fasten, to engage in battle; attacco, a sticking; Sp. atacar, to assault, to fasten or make close, to cram; Port. atacar, to attack, to seize, to fasten; Heb. and Ch. ָעַ֫וָּה, to thrust, to drive, to strike. It seems to be allied to attach; but the latter verb agrees better with the Eth. ָעַ֫וָּה to press, whence ָעַ֫וָּה ָעַ֫וָּה to press, to make close; and the Ch. ָעַ֫וָּה, to accuse, to unite. Class Dg:]

1. To assault; to fall upon with force; to assail, as with force and arms. It is the appropriate word for the commencing act of hostility between armies and navies.

2. To fall upon, with unfriendly words or writing; to begin a controversy with; to attempt to overthrow or bring into disrepute, by satire, calumny or criticism; as, to attack a man or his opinions in a pamphlet.

Dict. of Nat. Hist.

ATTAIN, v. t. [Fr. and Norm. attendre; L. attingere, to reach, to come or to overtake; ad and tango, to touch, reach or strike; that is, to thrust, urge or push to. It has no connection with L. attineo. See Class, Dg:]

1. To reach; to come to or arrive at, by motion, bodily exertion, or efforts towards a place or object.

2. To reach; to come to or arrive at, by an effort of mind. Such knowledge is too wonderful for me; it is high; I cannot attain to it. Ps. xxxix.

3. To be able to do; to have the power or capacity to do; to possess the means or ability to do.

Regularly this verb should be always followed by to; the omission of to, and the use of the verb, in a transitive sense, may have originated in mistake, from the opinion that the verb is from the L. attineo, and equivalent to obtain.

ATTAIN, v. t. To gain; to compass; to achieve or accomplish, that is, to reach by efforts; with verbs of obtaining. Is he wise who hopes to attain the end without the means? Titubon.

This use of the verb is now established; but in strictness to is here implied; attain to the end. The real sense, as in the intransitive use of the verb, is, to reach or come to with effort, seeing. This word always implies an effort towards an object. Hence it is not synonymous with obtain.
and procure, which do not necessarily imply such effort. We procure or obtain a thing by the exertion of effort, but we cannot obtain a thing by inheritance, but we do not attain it by such means. An intimation to this distinction has led good authors into great mistakes in the use of this word.

2. To reach or come to a place or object by progression or motion.

But ere such usings shall his ears attain.

Hoole's Tasso.

Can he now attain.

Milton.

3. To reach in excellence or degree; to accomplish.

But in this act of attain, that which is attained to, or obtained by exertion; acquisition; as, a man of great attainments.

ATTAINABLENESS, n. The quality of being attainable.

ATTAINABLE, a. That may be attained, that may be reached by efforts of the mind or body; that may be compassed or accomplished by efforts directed to the object; as, perfection is not attainable in this life. From an intimation to the true sense of this word, as explained under attain, authors have very improperly used this word for obtainable, procurable; as in the following passages. "The kind and quality of food and liquor; the species of habitation, furniture and clothing to which the common people of each country are habituated, must be attainable with ease and certainty." Paley, Phil. B. 6. Ch. 11. "Gen. Howe would not permit them to be purchased in Philadelphia, and they (clothes and blankets) were not attainable in the country." Marshall's Life of Washington, 3, 428. Each of these words should be obtainable.

Attraction may be performed by impulse or other means.

The power or act of alluring, drawing to, inviting or engaging; as the attraction of beauty or eloquence.

Contiguous attraction is that which is exerted between minute particles or atoms, at insensible distances.  

When this principle unites particles of the same kind, it is called affinity of aggregation, cohesive affinity or cohesion.

When it operates on dissimilar particles, producing union, it is distinguished as heterogeneous, and called chemical attraction or affinity.

Elective attraction, in chemistry, is otherwise called affinity.  

It is that power in substances, which elects or selects from a mixture those elements with which they have the strongest tendency to combine.

**AV**

1. A passage, a way or opening for entrance into a place; any opening or passage by which a thing is or may be introduced.

2. An alley, or walk in a garden, planted above the eighth, for his care of the goods.

3. A street, as in Washington, Columbia.

**AVER** v. t. [Fr. averer; It. averare, to aver or verify; Arm. quirya, from the root of versus, true; Fr. voir, or fr; W. gwir; Corn. air; Ger. wahr; D. waar. See Verify.]

To affirm with confidence; to declare in a positive or peremptory manner, as in confirmation of asserting the truth.

**AVERAGE** a. Medial; containing a mean proportion or quantity.

**AVERAGE** v. t. To find the mean proportion or quantity; to reduce to a mean quantity; to divide among a number, according to a given proportion; as, to average a loss.

**AVERAGE, v. t.** To form a mean or mediant sum or quantity; as, the losses of the owners will average 25 dollars each. These spars average 10 feet in length.

**AVERAGE, n.** [Norm. aver, avera, cattle, goods, Sp. averio, from aver or aver; Fr. not to have or possess. In ancient law, a duty or service which a tenant was bound to render to his lord, by his beasts and carriages or instruments of husbandry. Spelman. But averageum signifies above the eighth, for his care of the goods; Sp. averio, damage sustained by goods or ships; Port. averiar, an allowance out of freight to the master of a ship, for damage sustained; contribution by insurers, to make good a loss; It. averia; Dan. averier, damage of a ship or waste of goods, extraordinary charges during a voyage. If averiar signifies damage, and is from aver or haber, Spanish, to have, the sense of the word is probably that which happens or falls, a misfortune, for the verb have and happen are radically the same word; Spanish, haber, to have, and to happen or befall; also fortune, property. This would give the sense of damage, or of proportion, lot, share, that which falls either by cutting away the masts, throwing overboard, or by the root. Hence, as authors tell us, its poisonous qualities, which the poets represent as so insidious, as to set flies and owls flying over. Hence, as authors tell us, its name, averio, without birds. Virgil. Mela. Strabo.

- **AVERPENNY, n.** Money paid towards the king's carriages by land, instead of service by the beasts in kind. Burn.

- **AVERED, pp.** Affirmed; laid with an avow.

- **AVERMENT, n.** Affirmation; the act of averring.

- **AVERMENT, n.** A sort of grape. Ash. Johnson.

- **AVER'IAN, n.** Pertaining to Averns, a lake of Campania in Italy, famous for its poisonous qualities, which the poets represent as so insidious, as to set flies and owls flying over. Hence, as authors tell us, its name, averio, without birds. Virgil. Mela. Strabo.

**AVERT** v. t. [L. averto, avertere, to turn, anclyeste, roto; hence vertex, vertex, averto; probably allied to L. vario; Eng. veer; Sp. birar; Eth. [Afr. bar. Gk. avro.]

1. To turn from; to turn off or away; as, to avert the eyes from an object.

2. To keep off, divert or prevent; as, to avert an approaching calamity.

3. To cause to displease. Hooker. But this sense seems to be improper, except when heart or some equivalent word is used; as, to avert the heart or affections, which may signify to alienate the affections.

**AVERT**, v. i. To turn away. Thomson.

**AVERTER, n.** One that turns away; that which turns away.

**AVERTING, pp.** Turning from; turning away.

**AVIARY, n.** [L. aviarium, from avis, a bird.]

A bird cage; an inclosure for keeping birds confined.

**AVISIOUSLY, adv.** [See Avidity.] Eagerly; with greediness.

**AVITY, n.** [L. aviditas, from avidus, and this from avo, to desire, to have appetite; Hes., and Ch. avo, to desire, or covet.]

1. Greediness; strong appetite; applied to the senses.

**AVE**

Hence the expression in bills of lading, "paying so much freight, with primage and average accustomed." Cowel. Engr.

4. In England, the breaking up of cornfields, eddilish or roughings. Ash. Spelman. Upon, or on an average, is taking the mean of unequal numbers or quantities.

**AVERAGE, a.** Media; containing a mean proportion or quantity.

**AVERAGE, v. t.** To find the mean proportion or quantity; to reduce to a medium; to divide among a number, according to a given proportion; as, to average a loss.

**AVERAGE, v. t.** To form a mean or mediant sum or quantity; as, the losses of the owners will average 25 dollars each. These spars average 10 feet in length.

**AVERAGED, pp.** Reduced or formed into a mean proportion, or into shares proportioned to each man's property. Jefferson.

**AVERAGING, pp.** Forming a mean proportion out of unequal sums or quantities, or reducing to just shares according to proportion.

**AVERAGEMENT, n.** [See Aver.] Confirmation; positive assertion; the act of averring.

**AVERAGEMENT, n.** The act of tearing up or raking away by the roots.

**AVER'ICATION, n.** [L. averracione, of ab and rancio, from runcio, to weed, or rake away.]

This word and its derivatives ought to be followed by to, and never by from. This word includes the idea of from; but the literal meaning being lost, the affection of the mind signified by the word, is exerted towards the object of dislike, and this idea not included in the kindred terms, hatred, dislike, contrary, repugnant, &c., should be followed by to.

Indeed it is absurd to speak of an affection of the mind exerted from an object. Averse expresses a less degree of opposition in the mind, than detesting and abhorring.

Milton once uses averse in its literal sense, with from, but it is not according to the English idiom.

**AVERSELY, adv.** With repugnance; unwillingly. Brown.

**AVERSENESS, n.** Oppression of mind; dislike; unwillingness; backwardness. Herbert.

**AVERSION, n.** [Fr. aversion, from L. avertir.]

1. Opposition or repugnance of mind; dislike; disinclination; reluctance; hatred.

2. Opposition or contrariety of nature; applied to inanimate substances.

Magnaestia, notwithstanding this aversion to solution, forms a kind of paste with water. Fourcroy. Trans.

**3. The cause of dislike.**

Pain their aversion, pleasure their desire. Pope.

**AVERT**, v. t. [L. averto, avertere, to turn, anclyeste, roto; hence vertex, vertex, averto; probably allied to L. vario; Eng. veer; Sp. birar; Eth. [Afr. bar. Gk. avro.]

1. To turn from; to turn off or away; as, to avert the eyes from an object.

2. To keep off, divert or prevent; as, to avert an approaching calamity.

3. To cause to displease. Hooker. But this sense seems to be improper, except when heart or some equivalent word is used; as, to avert the heart or affections, which may signify to alienate the affections.

**AVIARY, n.** [L. aviarium, from avis, a bird.]

A bird cage; an inclosure for keeping birds confined.

**AVISIOUSLY, adv.** [See Avidity.] Eagerly; with greediness.

**AVITY, n.** [L. aviditas, from avidus, and this from avo, to desire, to have appetite; Hes., and Ch. avo, to desire, or covet.]

1. Greediness; strong appetite; applied to the senses.
2. Eagerness; intenseness of desire; applied to the mind.

BAB

B is the second letter, and the first articulation, or consonant, in the English, as in the Hebrew, Greek, Latin, and most other alphabets. In the Ethiopic, it is the ninth letter, and its shape is that of a hut. Perhaps from this or other like figure, it received its Hebrew name, beth, a house. It is a mute and a labial, being formed by pressing the whole length of the lips together, as in pronouncing eb. It is less perfectly mute than p, as may be perceived by pronouncing the syllables ab and ap. It is convertible, 1st, with p, as in the Celtic, ben or pen, a mountain; in the English, beek and peak, beck and peck; 2d, with n, as in the German, silver for silver; and in Spanish, b and p are used indifferently. 3d, with s, as in bore and perfora; English, hero, L. heros; in the Celtic bun, bunadh, bainn, stock, origin, foundation; English, found; L. fundamentum; with the Gr. θ, as Billy, for βοσκωνς; 4th, with r and w; as, Ir. fior, L. verus; fear, vir; Ir. basic, the wick of a candle.

The Greek B is always pronounced like the English V, and the Russian B corresponds with the Greek.

In composition, the letter B is changed into p before the letter p; as in opprino, from ob and premo; oppone, from ob and pone; into f, before f, as in offero, from ob and fero; into c before c, as in occido, from ob and cedo, and cedo.

As a numeral, B was used by the Hebrews and Greeks, as now by the Arabsians, for 2; by the Romans for 300, and with a dash over it thus B, for 3000. B is used also as an abbreviation; thus B. A. stand for bachelor of arts; B. L. for bachelor of laws; B.D. for bachelor of divinity; B.F. before the decrees of the old Romans, for bonum factum. In music, B stands for the tone major above A. In music, B also stands for bachelor of arts; B. L. for bachelor of laws; B.D. for bachelor of divinity; B. F, for fundamental; with the Gr. θ, as Baboon, the word for baboon, for bablon, a priest of Babylon. Encyc.

matter. Eouce.

Figuratively, an impartial state of the
mind, in deliberating; or a just estimate of
the reasons and arguments on both sides of a question, which gives to each its
due weight, or force and importance.

A balance magnifies equal weight, or equal
value, it is by custom used for the weight or
sum necessary to make two unequal weights or
equal weights; and, in accounts, balance is the
difference of two sums; as upon an adjustment of
accounts, a balance was found against
A, in favor of B. Hence, to pay a balance,
the payment is the balance and the
work is magnified.

Balance of trade is an equal exportation

BAT'TED, pp. Washed as in a bath; moistened with a liquid; bedewed.

BAT'TEN, v. To be or lie in a bath to be in water, or in other liquid, or to be immersed in a fluid, as in a bath; as, to bathe in fiery floods.

Shak.
BATTERING-RAM, n. In antiquity, a military engine used to beat down the walls of besieged places. It was a large beam, with a head of iron somewhat resembling the head of a ram, whence its name. It was suspended by ropes in the middle to a beam which was supported by posts, and balanced so as to swing back and forward, and was impelled by men against the wall. It was sometimes mounted on wheels.

BATTERY, n. [Fr. batterie; Sp. batería; It. batteria. See Beat.]
1. The act of battering, or beating.
2. The instrument of battering.
3. In the military art, a parapet thrown up.
4. In law, the unlawful beating of another.
5. In electrical apparatus and experiments, a galvanic battery, a pile or series of plates resembling the head of a ram, whence its name. See Beat.

BAT, n. [from 6a<, an animal.]
1. One that repeats the same thing in speaking.
2. Obscene; filthy; unchaste; applied to a language.

BAT'TLE, v. t. To cover with armed force. Fairfax.

BAT'TLE-AX, n. An ax anciently used by gunners and others employed about them, from the enemy's shot, with the guns employed. Thus, to erect a battery, is to form the parapet and mount the guns. The term is applied also to a number of guns ranged in order for battering and to mortars used for a like purpose. Observe that the term 'battery' is usually applied to armies or large bodies of men; but in popular language, the word is applied to an encounter between small bodies, between individuals, or inferior animals. It is one more generally applied to the encounters of land forces than of ships; the encounters of the latter being called engagements. But battle is applicable to any combination of enemies.
BAY, n. [Fr. baie; Sp. Port, bahia; It. baia. D. baai; contracted from the root of Sax. baige, baige, byggen, D. boogen, to bend, whence bowe.]

1. An arm of the sea, extending into the land, not of any definite form, but smaller than a gulf, and larger than a creek. The name however is not used with much precision, and is often applied to large tracts of water, around which the land forms a curve, as Hudson’s Bay. Nor is the name restricted to tracts of water with a narrow entrance, but used for any recess or inlet between capes or head lands, as the bay of Biscay.

2. A pond-head, or a pond formed by a dam, for the purpose of driving mill-wheels.

[believe not used in U. S.]

3. In a barn, a place between the floor and the end of the building, or a low inclosed place, for depositing hay. In England, says Johnson, if a barn consists of a floor and two heads, where they lay corn, they call it a barn of two bays.

These bays are from 14 to 20 feet long, and floors from 10 to 12 feet broad, and usually 20 feet long, which is the breadth of the barn. Builder’s Dict.

4. In ships of war, that part on each side between decks which lies between the hatches. Chambers.

Also, to speak frequently; to enforce by repetition.

To beat up for soldiers, is to go about to enlist them into the army. In seamanship, to beat, is to make progress against the direction of the wind, by sailing in a zigzag line or traverse. With hunters, a stag beats up and down, when he runs first one way and then another. Encyc.

3. The declaration of blessedness made by the Pope, by which he declares a person blessed after death. This is the first step towards canonization, or the raising of one to the dignity of a saint. No person can be beatified till 50 years after his death. All certificates or attestations of his virtues and miracles are examined by the congregation of rites, and this examination cannot be held before four years after his death. Holiness decrees the beatification, and the corpse and relics of the intended saint are exposed to the veneration of all good Christians. Encyc.

BEATIFICATION, n. [L. beatus, happy, from beo, to bless, and facio, facere, to make.]

1. To make happy; to bless with the completion of celestial enjoyment.

2. In the Roman church, to declare, by a decree or public act, that a person is received into heaven, and is to be revered as blessed, though not yet canonized. Encyc.

BEATING, v. ppr. Laying on blows; striking; dashing against; conquering; pounding; sailing against the direction of the wind; &c.

BEAUTIOUS, a. Fine, gay, handsome; one whose occupation is to hammer metals. On this occasion, the elegance of the binding and the easy opening of the book chiefly depend. Encyc.

Beating the wind, was a practice in the ancient trial by combat. If one of the combatants did not appear on the field, the other was to beat the wind, by making flourishes with his weapons; by which he was entitled to the advantages of a conqueror.

BEAUTY, n. be'uty. [Fr. beauti, from beau.]

1. An assemblage of graces, or an assembly of the properties which constitute beauty. Thus, we may observe in general that beauty consists in whatever pleases the eye of the beholder, whether in the human body, in a tree, in a landscape, or in any other object.

Beauty is intrinsic, and perceived by the eye at first view, or relative, to perceive which the aid of the understanding and reflection is requisite. Thus, the beauty of a machine is not perceived, till we understand its uses, and adaptation to its purpose. This is called the beauty of utility. By an easy transition, the word beauty is used to express what is pleasing to the other senses, or to the understanding. Thus we say, the beauty of a thought, of a sound, of music, &c.

So beauty, armed with virtue, bow's the soul With a commanding, but a sweet control. Pervia.

2. A particular grace, feature or ornament; any particular thing which is beautiful and pleasing: as the beauties of nature.

These significations differ from the sense in English. But the sense is, to come to, to arrive, to reach, to fall or pass to. [See Come.] Hence the sense of suiting, agreeing with. In Sax. ciuman, to come, to be; and Sax. cieaman, is to please, that is, to suit or be agreeable.

1. To pass from one state to another; to change from another state or condition, by a change of form, substance, properties or qualities, or by the intervention of time, action, or cause; as, a cion becomes a tree.
BED

The Lord God breathed into his nostrils the breath of life and man became a living soul.

To the Jew, I became a Jew.

To become, usually with what preceding; to be the fate of; to be the end of; to be the final or subsequent condition; as, what will become of our commerce? what will become of us?

In the present tense, it applies to place as well as condition. What has become of my friend? that is, where is he? as well as, what is his condition? Where is he become? used by Shakspeare and Spenser, is obsolete; but this is the sense in Saxon, where has he fallen?

BECOME, v. t. In general, to suit or be suitable; to be congruous; to befit; to accord with, in character or circumstances; to be worthy of, decent or proper. It is used in the same sense applied to persons or things.

It is not become a cart as well as another man.

This use of the word however is less frequent, the verb usually expressing the suitableness or properness of persons or things; as, a robe becomes a prince. It becomes me so to speak of an excellent poet.

BECOMING, pp., but used rarely or never except as an adjective. Fit; suitable; congruous; proper; graceful; belonging to the character, or adapted to circumstances; as, he speaks with becoming boldness; a dress is very becoming.

Some writers formerly used of, after this word: Such discourses as are becoming of them.

But this use is inelegant or improper.

BECOMINGLY, adv. After a becoming or proper manner.

BECOMINGNESS, n. Fitness; congruity; propriety; decency; propriety arising from fitness.

BECRIPPLE, v. t. [See Cripple.] To make lame or crippled.

BED, n. [Sax. bed; D. bed; G. Bett or Bette; Goth. bad.] The sense is a lay or spread, or a dress is very becoming.

From bed and board. In law, a separation of man and wife, without dissolving the bands of matrimony, is called a separation from bed and board. A man of this case is not suitable to his character, or adopted to circumstances; as, a robe becomes a prince.

To become worthy of, decent or proper. It is used with, in character or circumstances; to be congruous; to befit; to accord with feathers or wool; but a bed may be made of straw or any other materials. The word bed includes often the bedstead.

A place or an article of furniture to sleep in; as, a bed of sulphur; a bed of sand.

A plat or level piece of ground in a garden, to make partaker of the bed. Bacon.

A layer; a stratum; an extended mass of any thing, whether upon the earth or within it; as, a bed of sulphur; a bed of sand or clay.

To bring to bed, to deliver of a child, is rarely used. But in the passive form, to be brought to bed, that is, to be delivered of a child, is common. It is often followed by, as, to be brought to bed of a son.

To put to bed, in midwifery, is to deliver of a child.

Dining bed, or discuratory bed, among the ancients, a bed on which persons lay at meals. It was four or five feet high, and would hold three or four persons. Three of these beds were ranged by a square table, one side of the table being left open, and accessible to the warrers. Hence the Latin name for the table and the room, triclinium or three beds.

Encyc. From bed and board. In law, a separation of man and wife, without dissolving the bands of matrimony, is called a separation from bed and board, a menage et theore. In this case the wife has a suitable maintenance allotted to her out of the husband's estate, called alimony.

BED'STREAV, n. [bed and straw.] A straw of honey-bee is the most interesting to inanimate objects. It has been cultivated from the earliest periods, for its wax and honey. It lives in swarms or societies, of from 10,000 to 50,000 individuals. These swarms contain three classes of bees, the females or queen bees, the males or drones, and the neuters, or workers. In the former, there is one only in each hive or swarm, whose sole office is to propagate the species. It is much larger than the worker bees. The drones serve merely for impregnating the queen, after which they are destroyed by the workers. These last are the laborers of the hive. They collect the honey, form the cells, and feed the other bees and the young. They are furnished with a proboscis by which they suck the honey from flowers, and from fruits by which they reduce the honey into a state fit for the hive in its stomachs, where they disgorge it into the cells. The pollen of flowers settles on the hairs with which the bee's body is covered, whence it is collected into pellets, by a brush on the second pair of legs, and deposited in a hollow in the third pair. It is called bee bread, and is the food of the larvas or young. The adult bees feed on honey. The wax was supposed to be formed from pollen by a digestive process, but it is now ascertained that it is formed from the honey by a similar process. The females and neuters have a barbed sting, attached to a bag of poison, which flows into the wound inflicted by the sting. When a hive is overstocked, a new colony is sent out under the direction of a queen bee. This is called swarming.

not so clear as to leave no doubt; but the shades of strength in opinion can hardly be defined, or exemplified. Hence the use of qualifying words; as a firm, full or strong belief.

5. The thing believed; the object of belief. Superstitious prophecies are the belief of fools. Bacon.

6. A creed; a form or summary of articles of faith. In this sense, we generally use Creed.

BELIEVABLE, a. That may be believed; credible. Sherwood.

BELIEVE, v. t. To credit upon the authority or testimony of another; to be persuaded of the truth of something upon the declaration of another, or upon evidence furnished by reasons, arguments, and deductions of the mind, or by other circumstances, than personal knowledge. When we believe upon the authority of another, we always put confidence in his veracity. When we believe upon the authority of reasoning, arguments, or a concurrence of facts and circumstances, we rest our conclusions upon their strength or probability, their agreement with our own experience, &c.

2. To expect or hope with confidence; to trust. I had fainted, unless I had believed to see the goodness of the Lord in the land of the living. xvii. 31.

BELIEVE, v. i. To have a firm persuasion of any thing. In some cases, to have full persuasion, approaching to certainty; in others, more doubt is implied. It is often followed by in or on, especially in the scriptures. To believe in, is to hold as the object of faith. "Ye believe in God, believe also in me." John xiv. To believe on, is to trust, to place full confidence in, to rest upon, with faith. "To them gave he power to become the sons of God, even to them that believe on his name." John iii. 36. But there is no ground for much distinction.

In theology, to believe sometimes expresses a mere assent of the understanding to the truths of the gospel; as in the case of Simon. Acts viii. In others, the word implies, with the whole of the mind, a yielding of the will and affections, accompanied with a humble reliance on Christ for salvation. John i. 12. iii. 15.

In popular use, and familiar discourse, to believe often expresses an opinion in a vague manner, without a very exact estimate of evidence, noting a mere preponderance of opinion, and is nearly equivalent to think or suppose.

BELIEVED, pp. Credited; assented to, as true.

BELIEVER, n. One who believes; one who gives credit to other evidence than that of personal knowledge.

See Peal.] A vessel or hollow body, used for making sounds. Its constituent parts are a barrel or hollow body, enlarged or expanded at one end, an ear or cannon by which it is sounded, a steel beam, and a clapper on the inside. It is formed of a composition of metals. Bells are of high antiquity. The blue tinge of the Jewish High Priest was adorned with golden bells; and the kings of Persia are said to have had the horns of their rams adorned with them in like manner. Among the Greeks, those who went the nightly rounds in camps or garrisons, used to ring a bell, at each sentinel-box, to see that the soldier on duty was awake. Bells were also put on the necks of criminals, to warn persons to move out of the way of so ill an omen, as the sight of a criminal or his executioner; also on the necks of beasts and birds, and in houses. In churches and other public buildings, bells are now used to notify the time of meeting of any congregation or other assembly. Encyc.

In private houses, bells are used to call servants, either hung and moved by a wire, or as hand-bells. Small bell-ringers are also used in electrical experiments.

BETRIMMED, pp. Adorned; decorated.

BETRAY, v. t. to betray. [Chaucer wrote betrav, betrass, and the Fr. trahir is a contraction of traire ; Arm. tragaz, to betray; Norm. trair, to draw in, to betray; treive, a traitor; Fr. trahir, which seems to be the L. treabo. From trahir, is formed trahissant, and trahison, treason. If treabo is the root, the sense is, to draw aside, to withdraw, or lead away; which would agree with the D. betrayeren, G. betrügen, Sw. bebrogga, Dan. betrager, to deceive; and treachery, Fr. tricherie, is from the root of trick. I do not find betrogan in the Saxon, but bedrog is rendered fidelit, and this is from dragaen, to draw. Betray then seems to be a compound of be and dragoen; to draw; and betrass, supra, may be from a different root. In strictness, to fail in duty; to be guilty of breach of trust; to violate the confidence reposed. The word does not in itself import to deliver up; but by usage, either with or without the word enemies, it signifies to deliver up, in breach of trust.

1. To deliver into the hands of an enemy by treachery or fraud, in violation of trust as, an officer betrayed the city.

2. To violate by fraud, or unfaithfulness; as, to betray a trust.

3. To violate confidence by disclosing a secret, or that which was intrusted; to expose; followed by the person, or the thing; as, my friend betrayed me, or betrayed the secret.

4. To disclose, or permit to appear, what is intended to be kept secret, or what prudence would conceal.

Be swit to hear, but cautious of your tongue, lest you betray your ignorance. Watts

Hence.

5. To mislead or expose to inconvenience not foreseen; as, great confidence betray a man into errors.

Nor, after length of years, a stone betray the place where once the very ruin lay. Addison

This river betrays its original in its name.

All the names in the country betray great antiquity. Bryant

6. To show; to discover; to indicate what is not obvious at first view, or would otherwise be concealed.

Nor, after length of years, a stone betray the place where once the very ruin lay. Addison

But when I rise, I shall find my legs betraying me. Shak.

7. To fail, or deceive.

BLOW, n. [This probably is a contracted word, and the primary sense must be, to strike, thrust, push, or throw, that is, to drive. I have not found it in the cognate dialects. If g or other palatal letter is lost, it corresponds in element with the L. plag, Gr. πλάγιος, Eng. plag. But blow, a stroke, is written like the verb to blow, the Latin flabo, and to blow, to blossum. The letter lost is probably a dental, and the original was bl/o or bloh, in which case the word has the elements of loud, loudo, clado, lad, &c.]

1. The act of striking; more generally the stroke; a violent application of the hand, fist, or an instrument to an object.

2. The fatal stroke; a stroke that kills; hence, death.

3. An act of hostility; as, the nation which strikes the first blow. Hence, to come to blows, is to engage in combat, whether by individuals, armies, fleets or nations; and when by nations, it is war.

4. A sudden calamity; a sudden or severe evil. In like manner, plaga in Latin gives rise to the Eng. plague.

5. A single act; a sudden event; as, to gain or lose a province at a blow, or by one blow. At a stroke is used in like manner.

6. A spot or egg deposited by a fly, on flesh or other substance, called a fly-blow.

BLOW-PIPE, n. [blow and pipe.] An instrument by which a blast or current of air is driven through the flame of a lamp or candle, and that flame directed upon a nearby substance, to fuse or vitrify it.

BLOW-Pipe of the artist, a conical tube of brass, glass or other substance, usually a quarter of an inch in diameter at one end, and cylindrical or nearly so at the other, where it is bent nearly to a right angle. This is used to blow the wood, through the flame of a lamp or candle, upon the substance to be fused.

BLOW-Pipe of the mineralogist, the same instrument substantially as the foregoing, but usually fitted with an ivory or silver mouth-piece, and with several movable jets to produce flames of different sizes.

Its office is to produce instantly a furnace heat, on minute fragments of mineral substances, supported on charcoal, by platinum forceps, &c.

Compound Blow-pipe of Dr. Hare, invented in 1821, an instrument in which oxygen and hydrogen, propelled by hydrostatic or other pressure, coming from separate reservoirs, in the proportions requisite to form water, are made to unite in a capillary orifice, at the moment when they are kindled. The heat produced, when the focus is formed on charcoal or any non-conducting substance, is such as to had everything but the diamond, to burn the metals, and to dissipate in vapor, or in gaseous forms, most known substances.

The blow-pipe of the mineralogist, Clarke, &c., is the compound blow-pipe of Dr. Hare, with some important modifications. 
Silliman.

BONE, n. [Sax. ban; Sw. ben; D. been; bone or leg; Ger. bein, a leg; Dan. been, leg or bone. The sense probably is, that which is set or fixed.]

1. A firm hard substance, of a dull white color, composing some parts of the framework of an animal's body. The bones of an animal support all the softer parts, as the flesh and vessels. They vary in texture in different bones, and in different parts of the same bone. The long bones are compact in their middle portion, with a central cavity occupied by a network of plates and fibers, and cavities or sponginess at the extremities. The flat bones are compact externally, and cellular internally. The bones in a fetus are soft and cartilaginous, but they gradually harden with age. The ends of the long bones are larger than the middle, which renders the articulations more firm, and in the fetus are distinct portions, called epiphyses. Bones are supplied with blood vessels, and in the fetus, or in a diseased state, are very vascular. They are probably also furnished with nerves and absorptions, though less easily detected in a sound state. They are covered with a thin, strong membrane, called the peristeenium, which, together with the bones, has very little sensibility in a sound state, but when inflamed, is extremely sensible. Their cells and cavities are occupied by a fatty substance, called the medulla or marrow. They consist of earthy matter, rather more than half; gelatin, one sixteenth, and cartilage, about one third of the whole. The earthly matter gives them their solidity, and in the human body, is composed of a small portion of carbonate of lime and phosphat of magnesia.

BORER, pp. of bear, boren. Brought forth, as an animal. A very useful distinction is observed by good authors, who, in the sense of produced, or brought forth, write the word born; but in the sense of carried, write it borne. This difference of orthography renders obvious the difference of pronunciation.

1. To be born, is to be produced or brought into life. For the word used, in this case, that of man born a prince or a beggar. It is followed by after, by the mother or ancestors.

Man that is born of woman is of few days and full of trouble. Job xiv.

2. To be born, or born again, is to be regenerated and renewed; to receive spiritual life. John iii.

BOROUGH, n. burro. [Goth. baergis; Sax. burg, burh, bearh, boerge, byrig; Ir. breg; Fr. bourg; It. borgo; Sp. burgos; D. burg and beg; Dan. borg; Arm. bourg; G. burg and berg; Gr. προτειτο, Ar. بور.] Sans. burra. This word, in Saxon, is interpreted a hill, heap, mountain, fortification, castle, tower, city, house and tomb. Hence Perga, in Pamphylia, Berga, in Norway, Burgos, in Spain, and probably, Prague, in Bohemia. In W. bur, berge, signifies a wall, rampart, or work for defense, and bardais is a barracks. But the original sense probably is found in the verb, Sax. waerg, D. and G. weergen, Russ. weergen, to keep, or save, that is, to make close or secure. Hence it coincides with park, and L. parces, saving. See the next word. If the noun is the primary word, denoting hill, this is from throwing together, or in sense allied to that of one making fast or close. Or, if the word weerg is simply a form of weergan, to make fast or close.

Originally, a fortified city or town; hence a hill, for hills were selected for places of defense. But in later times, the term city was substituted to denote an Episcopal town, in which was the see of a bishop, and that of borough was retained for the same. At present, the name is given appropriately to such towns and villages as send representatives or burgesses to Parliament. Some boroughs are incorporated, others are not. Blackstone. Enece.

BOROUGH, n. burro. [Sax. borg, or elastic gum. [See Caoutchouc.]

BORROW, v. t. [Sax. borrow; to borrow; D. borgen, to borrow, lend or trust; Ger. borgen, the same; Dan. borg, to bor-row; borgen, bail, surety, pledge, warrant, main-tenant; borg, trust, credit; Sw. borgen, a giving bail; borg, a fortress. The primary sense is, to make fast or secure.

1. To take from another by request and consent, with a view to use the thing taken for a time, and return it, or if the thing taken is to be consumed or transferred in the use, then to return an equivalent in kind; as, to borrow a book, a sum of money, or a loaf of bread. It is opposed to lend.

BORROWER, n. One who borrows; also an instrument to make holes with by turning.

BRIGHT, n. brite, bright, byght, or byght, clear; shining, whence brightness, brightness, bearthyn, Goth. bartjunig, to shine or be clear, or to manifest; Ar. Ch. Heb. Syr. ব্রিট to shine, or more probably, Eth. ḫ rgul bareth, to shine, as the Eth. partiple ḫ rggle berht or berht, corresponds exactly with the Sax. On. But I have not found this word in any other Teutonic or Gothic language, and the original verb is lost in the Saxon. In Saxon, bearthynle, or brithhuly, signifies a moment, the twinkling of an eye. This directs us to the primary sense of the verb to shine, which is, to shoot, to dart, to glance. That this is the primary sense, we have evidence from the Saxon. bearthyn, which is a derivative from brith, and which signifies a moment, that is, the time of a shot, or darting, like glance.

CALX, n. plu. calces or calices. [L. calx; Sax. cælce; Dan. kæl; Fr. chaux.] The same word signifies chalk, lime, mortar, and the heel, and from that is formed calculus, a little stone. The word then signifies, primarily, a lump, or clod, or hard mass, and is allied to calyx. If calx is from chalk, the original word appears not observed by the Latins. See Calculater.

Propriety time or chalk; but more appropriately, the substance of a metal or mineral which remains after being subjected to violent heat, burning, or calcination, solution by acids, or detonation by niter, and which is or may be reduced to a fine powder. Metallic calxes are now called oxides. They are heavier than the metal from which they are produced, being combined with oxygen.

CAME, n. [Ucameltis; Gr. xàIme, a camel; Dan. kamel; G. kamel; Heb. Syr. Eth. xàIm.] A large quadruped used in Asia and Africa for carrying burdens, and for riders. As a genus, the camel belongs to the order of Pecora. The characteristics are; it has no horns; it has six fore teeth in the under jaw; the canine teeth are wide set, three in the upper and two in the lower jaw; there is a fissure in the upper lip. The dromedary or Arabian camel has one hump on the back, four callosous protuberances on the fore legs and two on the hind legs. The Bactrian camel has two humps on the back. The Llama of South America is a smaller animal, with a smooth back, small head, fine black eyes, and very long neck. The Pecos or sheep of Chili has no hump. Camels constitute the riches of an Arabian, without which he could neither subsist, carry on trade nor travel over sandy deserts. Their milk is his common food. By the camel's power of sustaining abstinence from drink, for many days, and of subsisting on a few coarse shrubs, he is peculiarly fitted for the parched and barren lands of Asia and Africa.

CAMBER, n. [Fr. cambrer, to arch, to vault, to bend, from L. campire, a vault, a chamber.]

Among builders, camber or camber-beam is a piece of timber cut archwise, or with an obtuse angle in the middle, used in platforms, where long and strong beams are required. As a verb, this word signifies to bend, but I know not that it is used.

CAMP'HOR-OIL, n. [See Camphor-tree.]

CAMP'HOR-TREE, n. The tree from which camphor is obtained. According to Miller, there are two sorts of trees that produce camphor: one, a native of Borneo, which produces the best species; the other, a native of Japan, which resembles the bay-tree, bearing black or purple berries. But the tree grows also in Sumatra. The stem is thick, the bark of a brownish color, and the ramification strong, close
and extended. The wood is soft, easily worked, and useful for domestic purposes. To obtain camphor, the tree is cut down, and divided into pieces, and the camphor taken from it in small white flakes, situated perpendicularly, in irregular veins, in and near the center of the tree. It is then repeatedly soaked and washed in soap water, to separate from it all extraneous matter. It is then passed through three sieves of different texture, to divide it into three sorts, head, belly, and foot camphor. Camphor oil is camphor, and its derivatives, to plant or establish, to create, to be prepared; Eth. ἄρτος, to be, to become, to be made; Ch. San. as the Hebrew. See Class Gn. No. 29, 38. and 58. 42. 45. &c. Can in English is treated as an auxiliary verb, the sign of the infinitive being omitted, as in the phrases, I can go, instead of, I can to go; thou canst go; he can go.

In botany, a species of cally or rather of indulgence, from a common chaffy genma receptive, or consisting of many chaffy serated along a stalk, slender as a thread, which is the common receptacle, as in hazel, birch, oak, willow,
usage, signifies only beasts of the bovine genus, oxen, bulls, cows and their young. In the laws respecting domestic beasts, horses, sheep, asses, mules and swine are distinguished from cattle, or neat cattle. Thus the law in Connecticut, "that all the owners of any cattle, sheep or swine, shall ear-mark or brand all their cattle, sheep and swine," does not extend to horses. Yet it is probable that a law, giving damages for a trespass committed by cattle belonging to another, would be adjudged to include horses.

In Great Britain, beasts are distinguished into "black cattle, including bulls, oxen, cows and their young; and small cattle, including sheep of all kinds and goats.

1. Rapidity in motion; swiftness; speed;
applied most generally to bodies moving on
or near the earth; as the celerity of
a horse or of a fowl. We speak of the
velocity of sound or of light, or of a planet in
its orbit. This distinction however is not
considered universal, nor can the different uses of the
two words be precisely defined. We apply
celerity rather than velocity to thought;
but there seems to be no reason, except
usage, why the two words should not be
synonymous.
An affection of motion by which a move-
able body runs through a given space in
a given time.

Chancery, n. 1. In Great Britain, the highest court of justice, next to the parliament, consisting of the court of king’s bench or court of chancery; one ordinary, being a court of common law; the other extraordinary, or a court of equity. The ordinary legal court holds pleas of recognizances acknowledged in the chancery, writs of seisin, for the return of letters patent, writs of partition, and all personal actions by or against any officer of the court. But if the parties come to issue, in fact, this court cannot try it by a jury; but the record must be delivered to the praecipe, according to the statute, and the court issue all original writs that pass under the great seal, commissions of charitable uses, bankruptcy,idiocy, lunacy, &c.

The extraordinary court, or court of equity, proceeds upon rules of equity and conscience, moderates the rigor of the common law, and gives relief in cases where there is no remedy in the common law courts. 

2. In the United States, a court of equity. 

Chancery, n. [Fr. chancerie; Arm. cancelleria; Sp. cancelleria; L. cancellaria, from cancelli, lattices, or from the judge, who presided in the court.]

Paus. Trans. Note.

Vol. I.
CLINCHING, ppr. Making fast by doubling over or embracing closely; gripping with the fist.

CLING, t. i. pret. and pp. clung. [Sax. clahan, to adhere and to wither; Dan. klynger, to grow in clusters; klynge, a heap or cluster. See the transitive verb below.]

1. To adhere closely; to stick to; generally, as the tendril of a vine clings to its support.

2. To adhere closely; to stick to; as a viscous substance. Wiseman.

3. To adhere closely and firmly, in interest or affection; as, men of a party clung to their leader.

CLINGING, ppr. Adhering closely; sticking to; winding round and holding to.

CLING, a. Apt to cling; adhesive.

CLING, n. To adhere closely; to stick to; to hold by the bed-side. Anciently persons receiving baptism on their death-beds were called cliners. Cax. Ewry. Taylor.

CLINIC, n. One confined to the bed by sickness.

CLINICALLY, adv. In a clinical manner; by the bed-side.

CLINKSTONE, n. [dink and stone, from its sonorousness. See Phonolite.]

A mineral which has a slaty structure, and is generally divisible into tabular masses, usually thick, sometimes thin like those of argillite. The cross fracture is commonly splintery. Its colors are dark greenish gray, yellowish, bluish, or ash gray; and it is usually translucent at the edges, sometimes opaque. It occurs in extensive masses, often composed of columnar or tabular distinct concretions, more or less regular. It is usually found among secondary rocks; sometimes resting on basalt, and covered by greenstones. Cleaveland.

CLINOMETER, n. [Gr. κλινων, to lean, and μέτρον, measure.]

An instrument for measuring the dip of mineral strata. Ure.

CLINQUANT, a. [Fr.] Dressed in tinsel finery. [Not English.] Shak.

CLIP, v. t. [Sax. cligan; Dan. klipper; Sw. klippa.] The sense seems to be, to strike, to cut off by a sudden stroke. The Danish word seems to have been only to cut off with scissors, but to wink or twinkle with the eyes. In our popular dialect, a clip is a blow or stroke; as, to hit one a clip. Cut is used in a like sense. The radical sense then is, to strike or drive with a sudden effort, thrust or spring.

1. To cut off with shears or scissors; to separate by a sudden stroke; especially to cut off the ends or sides of a thing, to make it shorter or narrower, in distinction from shaving and paring, which are performed by rubbing the instrument close to the thing shaved; as, to clip the hair; to clip wings.

2. To diminish coin by paring the edge.

3. To curtail; to cut short.

4. To confine, limit, restrain, or hold; to hug. [Little used.] Shak.

To clip it, is a vulgar phrase in New England for to run with speed. So cut is used; cut on, run fast. This seems to be the meaning in Dryden.

Some falcon stoops at what her eye designed, And with her eagerness the quarry miss'd, Straight flies at clip, and clips it down the gore. Dryden.

close.] 
1. Literally, a close; a close, or inclosed
place. A monastery or nunnery; a house
inhabited by monks or nuns. In a more
limited sense, the principal part of a regu-
lar monastery, consisting of a square,
erected between the church, the chapter-
house and the refectory, and over which
is the dormitory. The proper use of the
closter is for the monks to meet in for con-
versation. The closter is square, and has
its name from being inclosed on its four
sides with buildings. Hence in architec-
ture, a building is said to be in the form
of a closter, when there are buildings
on each of the four sides of the court.

Clough, m. clof. [Sex. clof, a patch, a plaster, a

plate, a swam or joint; Sw. klud; W. cluf, a

patch; clout, clout; chatter, to patch; Sex.

goluted, sewed together, clouted, patched;
gescoc mid gletuedum scon, shed with

clouted shoes. This undoubtedly signifies

patched shoes, for clut in Saxon does not

signify a nail. The word clout, a nail, may

be from the French, clou, clouter, from L.
claw, from the root of L. clavo, clavo.

Whether clouted brogues in Shakespeare sign-

ify patched shoes or shoes studded with

clouts, let the critic determine. Shakespeare

are common in England, and were for-

merly worn in America. The primary

sense is, to thrust or put on; hence the

sense of black.

1. A patch; a piece of cloth or leather, &c.,
to clothe a breach.

2. A piece of cloth for mean purposes.

Spenser.

3. A piece of white cloth, for archers to shoot

at. [Not now used.]

Shak.

4. An iron plate on an axe-tree, to keep it

from wearing.

[Fr. clou, clouter.] A small nail.

5. In vulgar language, a blow with the hand.

CLOUT, v. t. To patch; mend by sewing on a piece or patch; as clouted shoon, in

Matt.

This is the sense as understood by

Johnson. Mason understands the word clout to signify nailed, studded with small

nails, from the French clouter, and the

following words in Shakespeare, "whose

rudeness answered my steps too loud," give

some confirmation to Mason's interpretation.

In this case, the verb clout must signi-

 fy, to nail, or fasten with nails; to stud.

2. To cover with a piece of cloth.

Spenser.

2. To join clumsily; as clouted sentences.

Ascham.

4. To cover or arm with an iron plate.

5. To strike; to give a blow.

Beau.

Clout, cream, in Gay, is evidently a mis-

take for clotted cream.

Clout' ery, a. Clumsy; awkward.

Mortimer.

Clout' ing, pp. Patching; covering with a clout.

Clowe, pret. of clear. Obs. Spenser.

Clowe, n. [D. kloof. See Cleave.] A cleft;

as a clove of garlic; a ravine. This word,
though properly an apppellative, is not often
used as such in English; but it is appro-
priated to particular places that are real
clefts, or which appear as such; as the

Clove of Kaaterskill, in the state of New-

York, and the Stony Clove. It is properly

a Dutch word.

which are at first white, then green, and at

last red and hard. These are called
cloves.

CLOVE-GILLY-FLOWER, n. A species of Dianthus, bearing a beautiful flower, cultivated in gardens; called also Carnation pink.

Some writers suppose that gilly-flower should be written July-flower. But qu is not a corruption of the French giraffe, clou de girafe, clove; giraffa, a gilliflower; giron, clove-giroflé; L. Caryophyllus; Chaucer wrote close giroflé. Cant.Tales. 1382. The Italians write zucchero, perhaps for zuczato; Arm. ginegas, genielas. Johnson supposes the plant so called from the size of the flower, resembling that of clove; but it is probably from its shape, the nail-flower, as in Dutch. [See Clove.]

CLOVEN, pp. of clove. Divided; parted; pronounced clove.

CLOVEN-FOOTED, a. Having the foot divided into two parts, as the ox; bisulcous.

CLOVER, n. [Sax. clofer-erytig.] A dumpling; such; G. klaver; D. klaver; Dan. klaver; Sw. klubba; L. clover. The name then signifies club-grass, clover-wort, L. claven, from its flower. A genus of plants, called Trifolium, trefoil, or three-leaved, Fr. trèfle. There are numerous. The red clover is generally cultivated for fodder and for enriching land. The white clover is also excellent food for cattle, either green or dry, and from its flowers the bee collects no small portion of its stores of honey. To live in clover, is to live luxuriously, or in abundance; a phrase borrowed from the luxuriant growth of clover, and the feeding of cattle in clover.

CLOWN, n. [L. colonus, a husbandman.] A countryman; a rustic; hence, one who has the manners of a rustic; a clown; a man of coarse manners; an ill-bred man. Sidney. Dryden. Swift.

CLOWNAGE, n. The manners of a clown. [Not in use.]

CLOWNERY, n. Ill-breeding; rustic behavior; rudeness of manners. [Little used.]

L’Estrange.

CLOWISH, a. Containing cloven; consisting of rustic; as a closwish neighborhood. Dryden.

2. Coarse; hard; rugged; rough; as clowish hands.

COME, v. i. pret. came, part. come. [Sax. comen; or eceiman; Goth. eceiman, pret. cawan; D. komen, pret. kwamen; G. kommen; Sw. komma; Dan. komme, to come. Qu. W. cwm, Ir. ceim, a step. And qu. the Ar. ʿl Heb. Ch. ʿlp to rise, or stand erect; to set or establish; to subsist, consist, remain; to rectify, or set in order; and in Arabic, to be thick, stiff or congealed.

The senses of the words appear to be very different; but we use come in the sense of rising, or sprouting, applied to corn; the corn comes or comes up, G. keimen. So the butter comes, when it separates from the whey and becomes thick or stiff. And is not our common use of come, when we invite another to begin some act, or to move, for example, is the sense of come; the butter comes, when it separates from the whey and becomes thick or stiff. And is not our common use of come, when we invite another to begin some act, or to move, being originally directed to persons sitting or reclining, in the oriental manner? Coming implies moving, driving, shooting along, and so we use set; we say, to set forward; the tide sets north-west.

1. To move towards; to advance nearer, in any manner, and from any distance. We say, the men come this way, whether riding or on foot; the wind comes from the west; the ship comes with a fine breeze; light comes from the sun. It is applicable perhaps to every kind of susceptible of motion, and is opposed to go.

2. To draw nigh; to approach; to arrive: to be present.

Come thou and all thy house into the ark. Gen. vii.

All my time will I wait, till my change come. Job xiv.

When shall I come and appear before God? Ps. lxxii.

Then shall the end come. Math. xxiv.

Thy kingdom come; thy will be done. Math. xi.

The time has come.

3. To advance and arrive at some state or condition; as, the ships come to action; the players come to blows; is it come to this? His sons come to honor and he knoweth it not. Job xiv.

I wonder how he came to know what he had done; how did he come by his knowledge? Lavoisier.

4. To happen or fall out; as, how comes that? let come what will. Hence when followed by an object or person, with to, or on, to carry to light on.

After all that comes on us for our evil deeds, Ezra iv.

All things come alike to all. Eccles. iv.

To advance or move into view; to appear; as, blood or color comes and goes in the face.

Spenser. Shak.

5. To sprout, as plants; to spring. The corn comes up, or comes up. In the coming of sprouting of malt, as it must not come too little, so it must not come too much. Mortimer. So Bacon uses the word; and this it is that becomes nearly with the sense of ʿlp, genitor, 2 Kings xix. 35, and in the same chapter inserted in Isaiah xxxvi.

27. It is the G. keimen, Icelandic keina, English home, to bud, or germinate.

7. To become.

So come I a widow. Shak.

8. To appear, or ho, or formed, as butter; to advance or change from cream to butter; a common use of the word; as, the butter comes.

Hudibras.

9. Come, in the imperative, is used to excite attention, or to invite to motion or joint action; come, let us go.

This is the heer; come, let us kill him.

When repeated, it sometimes expresses haste: haste, come, come. Sometimes it expresses or introduces rebuke.

As the sense of come is to move, in almost any manner; in; to various applications, that sense is modified indefinitely by other words used in connection with it. Thus with words expressing approach, it denotes advancing nearer; with words expressing departure, as from, of, out of, &c., it denotes motion from, &c.

To come about, to happen; to fall out; to come to pass; to arrive. How did these things come about? So the French venir a bout, to come to the end, that is, to arrive.

To come about, to turn; to change; to come round. The wind will come about from west to east. The ship comes about. It is applied to a change of sentiments.

On better thoughts, and my urgent reasons,

They are come about, and won to the true side. B. Jonson.

To come again, to return. Gen. xxviii. Lev. xiv.

To come after, to follow. Math. xvi. Also, to come to obtain; as, to come to offer a book. To come in to reach; to come within reach of; to gain; to come so near as to be able to take or possess. We prize those most who are hardest to come at. To come at a true knowledge of ourselves.

Addison.

Also, to come towards, as in attacking.

To come down from thy glory. Jer. xviii.

To come forth, to come to get or obtain; to arrive.

To come forth, to issue or proceed from. Gen. xv. Is. xi. Micah v.

Also, to depart from; to leave. Mark ix.

Also, to come abroad. Jer. iv.

To come from, to depart from; to leave.

In popular language, this phrase is equivalent to, where is his native place or former place of residence; where did this man, this animal or this plant originate.

To come home, that is, to come to home, or
the house; to arrive at the dwelling. Hence, to come close; to press closely; to touch the feelings, interest, or reason. [See Home.]

To come in, to enter, as into an inclosure. Also, to comply; to yield; as, come in and submit.

Also, to arrive at a port, or place of rendezvous, as a ship has come in.

Also, to become fashionable; to be brought into use. Silken garments did not come in till late.

Also, to enter as an ingredient or part of a composition.

A nice sense of propriety comes in to heighten the character.

Also, to grow and produce; to come to maturity and yield. If the corn comes in well, we shall have a supply, without importation. Crops come in light.

Also, to lie carnally with. Gen. xxxviii.

To come in for, to arrive in time to take. To come of, to issue from; to proceed from, as a descendant.

To come nigh, is popularly used in like senses. To come near, to approach in place. Hence, to come no near, in seamanship, is an order to the helmsman not to steer so close to the wind.

To come off, to depart from; to remove from the table.

To come off from, to leave; to quit. Felton.

To come on, to advance; to proceed; as, come on, brave boys; night is coming on.

So we say, the young man comes on well in his studies, and the phrase often denotes a prosperous advance, successful improvement. So we say of plants, they come on well, they grow or thrive—that is, they proceed.

Also, to fall on; to happen to. Last that come on you, which is spoken of in the prophets.

Also, to invade; to rush on.

To come over, to pass above or across, or from one side to another. In distillation, to rise and pass over, as vapor.

To come to, to consent or yield. Swift.

To come together, to meet or assemble. To come up, to ascend; to rise.

To come up on the capstern, in seamanship, is to come close with; to fall on; to be effected. The phrase much used in the common version of the English writings.

To come up, to ascend; to rise.

Also, to spring; to shoot or rise above the earth, as a plant. Bacon.

Also, to come into use, as a fashion. Also, to become public; to escape from concealment or privacy.

To come up to, to approach near. Also, to advance to; to rise to.

To come up with, to overtake, in following or pursuit.

To come upon, to fall on; to attack or incite.

To come, in futurity; to happen hereafter. In times to come. Success is yet to come.

To take a lease for years to come. Locke.

Come is an intransitive verb, but the participle comes is much used with the substantive verb, in the passive form. "The end of all flesh is come." I am come, thou art come, he is come, we are come, &c. This use of the substantive verb, for have, is perhaps too well established to be rejected altogether. But it introduces a thread of elliptical phrases. In the phrase, "come Frayday, come Candlemass," there is an elliptic of certain words, as when Friday shall come. Come, come, the repetition of come, expresses haste, or exhortation to hasten. Sometimes it introduces a sprout. [Not used.]
